Charleston Conference™
ISSUES IN BOOK AND SERIAL ACQUISITION

November 8 and 29, 2023

AI started as productivity tool

- Rooted in automating logical tasks for efficiency gains
- Early experiments in:
 - Computing logic
 - Conversational bot
 - Robot
 - Autonomous vehicle

Source: Wooldridge (2018)

AI and the mathematical roots of computing logic

Alan Turing, British mathematician

Turing, Alan M. "Computing Machinery and Intelligence." *Mind* 59, no. 236 (1950): 433-460

Types of artificial intelligence

- Machine learning
- Recommender systems (“you may also like...”)
- Classification systems
- Expert systems
- Natural language processing
- Audio-visual processing
- Generative AI (text, image, AV, code, etc)

Sources: IBM (2023), Warwick (2012); Wooldridge (2021)

AI use cases

- Automated customer / user support
 - Corpus analysis (text, image, and more)
 - Data analysis (on large scale) to derive insights
 - Data cleanup and normalizing for data-centric projects
 - Decision support
 - Expert systems
 - Fraud detection
 - Law enforcement (e.g., facial recognition, behavior analysis & inferences)
 - Medical diagnosis and treatment support
 - Sentiment analysis
- and more...

Library use case: a machine learning example

- Machine learning as classifier tool
- Infers from training data
- Based on patterns exemplified in training data,
 - Training data inform classification labels for destination field.

Machine learning to automate subject-tagging

End Goal: New Books & Media LibGuide – need clean subject data

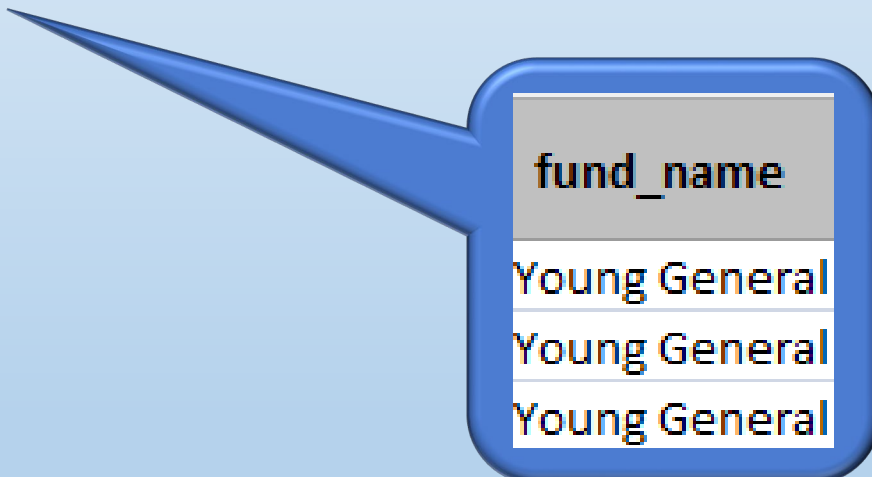

1. **Start:** Extract new titles' purchase data and bibliographic descriptions:
 1. Fund-code information as proxy to clean controlled subject names
 2. Bibliographic data to glean subjects and foundation for AI-classified subjects
 3. Unique record ID
2. **Data cleanup / fill-in / normalization via machine learning**
3. **Create raw html code:**
 1. Field concatenation – en masse for all record lines:
 1. Unique record ID and universal public-display URL syntax to hyperlink each title
 2. Additional html to enrich descriptions seen by end users
 2. Copy concatenated html into LibGuide html editor

Types of machine learning

- Supervised learning (our example will use supervised learning)
- Unsupervised learning
- Reinforcement learning
- Neural nets
- Deep learning and convolutional neural nets

Messy data – missing data

- Productivity gap 1:
 - Some fund codes are too general for automatic subject associations
 - → subject-agnostic → no automatable subject association
 - Missing proxy for automatic subject labelling

fund_name
Young General
Young General
Young General

Messy data – missing data, ctd.

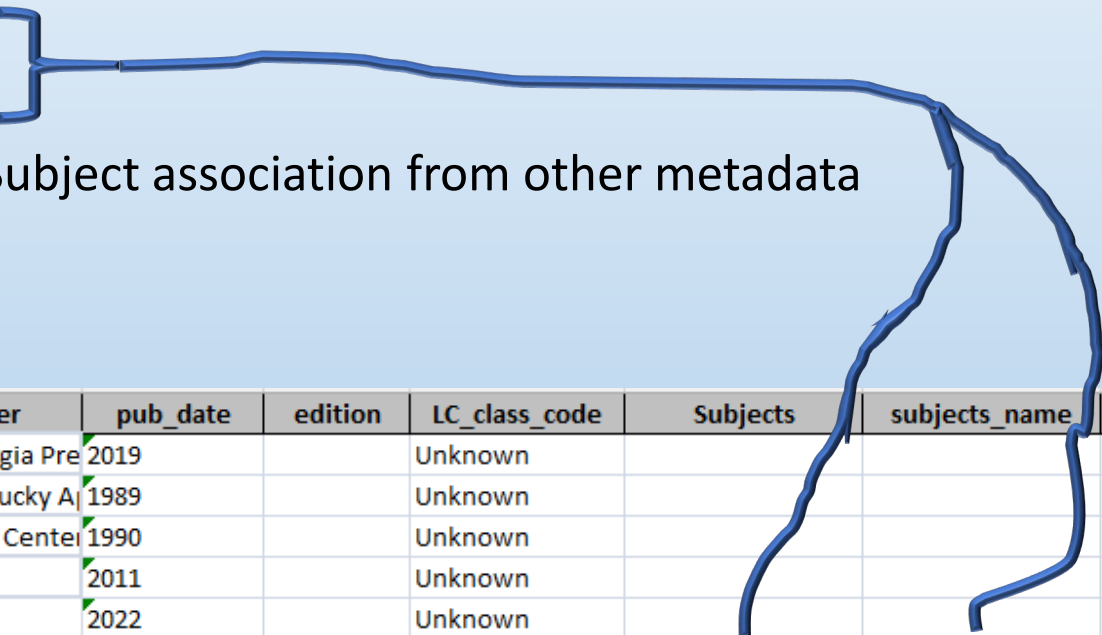

- Productivity gap 2:

- Too many minimal bibliographic records → combination of data problems:

- No data in Subject field

- No content description

- → need to extrapolate Subject association from other metadata

Messy data – missing data, ctd.

- Productivity gap 2, ctd.:

- Too many minimal bibliographic records → combination of data problems:

- No data in Subject field

- No content description

- → need to **extrapolate** Subject association from **other metadata**

The diagram illustrates the process of extrapolating subject data. A horizontal double-headed green arrow connects two curly braces. The left brace is positioned above the 'publication_place' and 'publisher' columns, with a green arrow pointing down to the 'publication_place' column. The right brace is positioned above the 'Subjects' column, with a green arrow pointing down to the 'Subjects' column. This visualizes the flow of information from other metadata fields to the subject field.

Machine learning for creating subject labels

- Task: to **extrapolate** subject associations from **metadata** describing titles where subjects are known.
- Supervised machine learning to generate Subject name labels:
 - Where titles' subject fields are blank
 - Where descriptive data are minimal or missing
- Training data – drawn from titles with known subject associations:
 - Inputs (title metadata)
 - Outputs (associated subjects – controlled vocabulary)
- Real-world output – inference from training data:
 - Examines real title's descriptive data
 - based on word patterns in input-output training data
 - From word patterns in training data, populates Subject for the real titles.

From training data to populating empty fields

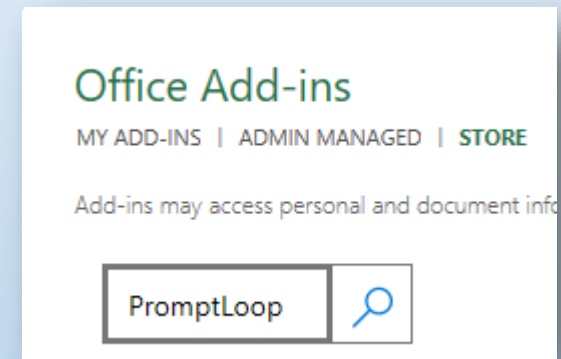

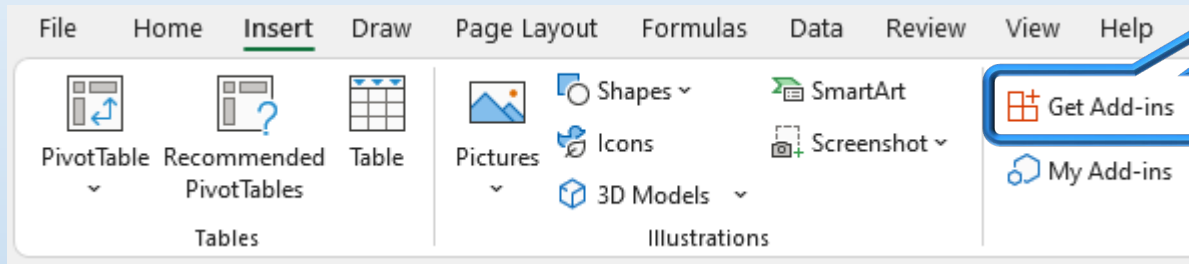

- Example solution: Supervised machine learning.
- Populates destination fields based on example data (“training data”)
- Training data “teach” the machine:
 - Word patterns in example input data (title and descriptive data)
 - Associative patterns in adjacent column’s Subject field
- Real titles’ destination Subject fields, AI-populated by:
 - Comparing title word patterns against training titles’ word patterns
 - Drawing from examples of training titles and metadata and desired subjects

Machine learning tool

- PromptLoop – spreadsheet AI plugin, works with:
 - Excel
 - Google Sheets

Preparing the Data

Training data: Input data

- For best results, enrich training data by:
 - concatenating Title field with several metadata fields
- Training data: titles with known subjects – titles concatenated with:
 - Subject
 - Subject Name
 - Language

Training data: Output data

- For titles with known subjects:
- Subject field adjacent to Title field
- Subjects in training output column:
 - Formal subject name for each title
 - Controlled vocabulary
 - Consistent title-to-subject associations

Training data – sample rows in spreadsheet

Concatenation formula:

=E2&" "&F2&" "&G2&" "&H2

Combines these fields:

- Title
- Subject
- Subject Name
- Language

Enriched training data -
concatenated training field:

Training data: subject associations

Target data: Subject names populated by AI output

Target data

Destination for AI output

	D	E
1	Titles dataset: concatenated descriptive field	AI output: Subject names
2	Literary Field Guide to Southern Appalachia Univ of Georgia Press	
3	Health In Appalachia: Proceedings from the 1988 Conference On Appalachia, November 3-5, 1988. Univ of Kentucky Appalac	
4	Children In Appalachia: Proceedings from the 1990 Conference In Appalachia, Nov. 6-7, 1990. Appalachian Center	
5	Appalachia - The Journal of The Appalachian Mountain Club - Vol. Vi. Read Books	
6	Lords of Chaos film (heavy metal band)	
7	Media Literacy: Media Ethics	
8	Advertising at the Edge of the Apocalypse	
9	Food Choices - How Our Diet Affects the Environment -	
10	Céline and Julie Go Boating - Céline et Julie vont en bateau French French film	

AI-generated Subject names will go here

PromptLoop syntax

Google Sheets:

- **=PROMPTLOOP_INFERENCE(A2:A360,B2:B360,D2)**

Excel:

- **=PROMPTLOOP.INFERENCE(A2:A360,B2:B360,D2)**

Role of PromptLoop formula:

- Inference function
- Infers from training data
- Learns from training data's **title**-to-**subject** associations
- Draws on titles' word patterns in **training** data (column **A**) and **target** data (column **D**)
- Populates destination field with AI-produced Subject names

PromptLoop formula – Google Sheets – detail

- **=PROMPTLOOP_INFERENCE(A2:A360,B2:B360,D2)**

The formula → meaning:

- Training data in columns **A** and **B**:
 - → cells **A2 through A360** provide titles with descriptive data
 - → cells **B2 through B360** provide each title's matching subject
- Target data in column **D**:
 - → Cells with **titles** in need of AI-produced subject names
- Destination cells in column **E** – each row:
 - → AI output of subject names, based on titles' word patterns in adjacent cells **D**

Populating the Subject names fields

=PROMPTLOOP_INFERENCE(A2:A360,B2:B360,D2)

E2	=PROMPTLOOP_INFERENCE(A2:A360,B2:B360,D2)		Copy formula to next cells down

Target data

AI output in
destination cells

	D	E
1	Titles dataset: concatenated descriptive field	AI output: Subject names
2	Literary Field Guide to Southern Appalachia Univ of Georgia Press	Appalachian Studies
3	Health In Appalachia: Proceedings from the 1988 Conference On Appalachia, November 3-5, 1988. Univ of Kentucky Appalac	Appalachian Studies
4	Children In Appalachia: Proceedings from the 1990 Conference In Appalachia, Nov. 6-7, 1990. Appalachian Center	Appalachian Studies
5	Appalachia - The Journal of The Appalachian Mountain Club - Vol. Vi. Read Books	Appalachian Studies
6	Lords of Chaos film (heavy metal band) ←	[error - not enough Music titles with similar words]
7	Media Literacy: Media Ethics	Communication
8	Advertising at the Edge of the Apocalypse	Communication
9	Food Choices - How Our Diet Affects the Environment -	Agriculture, Food and Environment
10	Céline and Julie Go Boating - Céline et Julie vont en bateau French French film	French & Francophone Studies

Training data were too dissimilar to this Music title

- insufficient Music examples among training data to provide basis for inferring this title's subject.
- Solution: looked up in catalog and examined the item in streaming video portal → filled Subject in manually.

Subject fields via AI → basis for project:

- AI-powered filling-in of needed fields speeds up the data work.
- This speeds up projects' next phases.
- Saves time for large projects.

libguides.uky.edu/new

A screenshot of the "New Books & Media at UK Libraries" website. The page has a white background with a blue header. The header contains the title "New Books & Media at UK Libraries" and a search bar labeled "Search this Guide". Below the header, there is a yellow box with the text "Welcome - New Library Books & Media". To the left of the main content area is a sidebar with a list of navigation options: "Welcome", "New Books & Media: Titles A - Z", "By Format: Books, Media, and more!", "By Languages & Cultures:", "By Subject: Major Discipline Groupings", "By Subject: A", "By Subject: B - C", "By Subject: D - E", "By Subject: F - G", "By Subject: H - J", "By Subject: K - M", "By Subject: N - R", "By Subject: S - Z", "Reference", and "Popular Reading Collection". The main content area has a "Welcome" section with a paragraph about the site's purpose. Below this, there is a section titled "New materials are listed in several ways:" with a list of options: "By title A - Z", "By languages", "By Subject -- grouped by major disciplines", and "By Subject Name A - Z:". Each of these options has a sub-list of ranges: "A - E", "F - M", and "N - Z". At the bottom of the main content area, there is a section titled "Each subject page can be embedded in subject-focused LibGuides and shared with our user communities." and a list of "New titles in focused collections:" with two items: "Reference" and "Popular Reading Collection".

Project Takeaways

- **Destination data:**
 - Use a separate data table to populate subject labels
 - Then copy the AI-generated tables into the working table
- **Preserve the master data table** as backup. Always! *Or else...*
- **Grimy data:** No data project is ever 100% clean
- **Setup takes time**
 - Data: • structures • content • processes & protocols
- **Configuring training data** for meaningful associative examples:
 - takes time
 - takes trial & error: ensuring training data are relevant to the task at hand

Project Caveats

- Plug-ins are tied to user account
 - Issues arise when office suite is on work account and plug-in is on home account
- Best when spreadsheet suite and plug-in are pegged to same account
 - Plug-in won't run on work account if:
 - institution does not have the software
 - Plug-in cannot connect to home account
- Free plug-in version will quickly encounter data limits
 - Will result in not populating all the needed destination data lines

More AI: a few additional tools...

Machine Learning

- Azure Machine Learning
- Watson and WatsonX
- TensorFlow
- Python (standalone or spreadsheet add-in)
- Unsilo

More AI: a few more tools, ctd.

Generative AI

- **Large language models** | natural language processing:
 - Bard
 - ChatGPT
- **Imaging models**
 - Adobe Firefly
 - Bing Image Creator
 - Canva
 - DALL-E
 - Midjourney
 - Vertex

AI implementations – broad considerations

Intellectual considerations

Will this AI tool bring insights?

Will this AI tool enhance knowledge, or foster laziness?

Sources: Marr (2023), Wooldridge (2021)

Practical considerations:

Is this AI tool the most effective solution to the problem at hand?

To boost success, start with an AI project tailored to a specific purpose.

No algorithmic bias & influence-mongering

Ethical AI: Risks & considerations:

- Work access
- Displacement
- Skill needs

- Data safety

- Confidentiality
- Privacy

- Respecting humans

AI: a few final words...

Don't be passive
users of other
providers' platforms
– create value in
your own right.

Intelligent automation, and:

- ethical considerations
 - responsibility
 - transparency
 - governance

Responses as of Nov.29, 2023

Poll responses

Q: What other thoughts do you have about AI?

Live session Nov.8, 2023 – 11 poll responses

- It is the present of information science and will become one of its historical gems.
- we need to embrace it and find a way to work with it. Trying to ban its use will backfire
- possibilities
- teaching it right
- it will soon be involved in everything we do
- worry that it will be harmful
- We need to regulate it and start putting it to work in logical and helpful ways
- it is the unknown
- Learn and embrace!
- AI is only as good as training and retraining. Always measure impact of AI-based decision making.
- it is very weak and monocultural

Virtual session Nov.29, 2023 – poll responses

- Study hard and learn.
- what are the limits

Responses as of Nov.29, 2023

Session Interactives

Online Q: Best AI certification?

List of programs will be added here to post-conference slides and Proceedings narrative.

Recommended readings
