# Toward a deeper understanding of costs & returns

#### **2012 Institute of Medicine Recommendations**

- Identify the components and costs of a minimum package of public health services
  - Foundational capabilities
  - Basic programs
- Implement a national chart of accounts for tracking spending and flow of funds
- Expand research on costs and effects of public health delivery

Institute of Medicine. For the Public's Health: Investing in a Healthier Future. Washington, DC: National Academies Press; 2012.

# Defining what to cost: the public health package

- Washington State's Foundational Public Health Services
- Ohio's Public Health Futures Committee: Minimum Package of Services
- Colorado's Core Public Health Services

 National Workgroup on Foundational Public Health Capabilities

# Defining what to cost: the public health package

The National Workgroup developed definitions of foundational public health capabilities, specified in the Public Health Leadership Form's Articulation of Foundational Capabilities and Foundational Areas

<u>http://www.resolv.org/site-</u> <u>healthleadershipforum/defining-and-constituting-</u> <u>foundational-capabilities-and-areas/</u>

# **Defining what to cost**

# Washington Public Health Improvement

### **Cost-Estimation Workgroup – Review**

- Workgroup on Public Health Cost Estimation convened to develop a methodology for estimating the resources required to develop and maintain foundational capabilities by governmental public health agencies at both state and local levels.
- First Meeting at RESOLVE November 22, 2013
- Series of conference calls to specify methodology
- January 30, 2014 in person meeting to finalize cost-estimation methodology
- Final report on recommended methodology:

**Estimating the Costs of Foundational Public Health Capabilities: A Recommended Methodology** 

Accessible at <u>http://works.bepress.com/glen\_mays/128/</u>

# **Cost estimation methods**

- Prospective "expected cost" methods
  - Vignettes
  - Surveys with staff and/or administrators
  - Delphi group processes
- Concurrent "actual cost" methods (micro-costing)
  - Time studies with staff
  - Activity logs with staff
  - Direct observation
- Retrospective "cost accounting" methods
  - Modeling and decomposition using administrative records
  - Surveys with staff and/or administrators

# Key issues: What's the cost of capability?

- Delineating state vs. local roles and division of effort
- Identifying scale and scope effects
  - By population served
  - By range of programs supported (portfolio effect)
- Identifying input factors that affect costs
  - Resource prices
  - Case mix
- Identifying key output differences across settings
  - Intensity
  - Quality
  - Reach

# Background and Overview: Piloting the Methodology in Kentucky

- Discussions with Kentucky Health Department Association (KHDA) to introduce & explain *Foundational Public Health Services (FPHS)* framework using RESOLVE FPHS articulation/definitions document
- Buy-in: KHDA formed a finance workgroup to evaluate how to incorporate FPHS framework into current financial & performance reporting system.
  - Crosswalk of chart of accounts with FPHS framework
- Participation in Cost-Estimation Pilot Project (6 members of workgroup serving as a representative sample – from small rural to large urban to multi-county health districts)
- Development of a cost data collection instrument

# Drawing from and Building on FPHS Cost Estimation in Washington State

- Use Public Health Improvement Partnership's September 2013 Report on estimating the cost of Foundational Capabilities (Berk and Associates)
- Use Washington Delivery and Cost Studies (DACS) to cost out FPHS with additional granularity

   disagregate labor resource use from non-labor costs, etc.
- Adapt Washington's Excel based data collection instrument to national FPHS definitions and national sampling frame

Foundational Public Health Services Preliminary Cost Estimation Model

> Final Report September 2013

 PUBLIC HEALTH
 SERVICES & SYSTEMS RESEARCH PRACTICE-BASED RESEARCH NETWORKS

# **Costing Methodology (1/2)**

- Adapt Washington DACS instrument as a starting template and modify & enhance accordingly
- Goal is for cost data collection instrument to be efficiently self-administered and capture estimates that account for uncertainty (i.e. dynamic nature of public health - FPHS demand and supply)
- Empirical approach: Estimate FPHS Costs by modeling uncertainty associated with cost data collected
  - Given sample size, quantify uncertainty through model simulation
- Generate probability distribution the range of all possible values and the likelihood of their occurence
  - Independent variables / Inputs  $\rightarrow$  Input Distribution
  - Dependent variable / Output → Distribution of output values calculated from all possible combinations ('scenarios') of input values
  - Best of all, these probability distributions can be graphed!

#### Survey Instrument (4/4): Current Attainment Scale Used to derive FPHS Projected Costs

"Based on your understanding of how each public health foundational capability and foundational area is defined, please provide your **global or overall assessment** on the following question: *For each foundational category, what is the estimated percentage currently being met by your health department?* "

	Point	Range (Min, Most
FOUNDATIONAL CAPABILITIES	Estimate	Likely, Max)
Assessment (surveillance and epidemiology)		
Emergency Preparedness (All Hazards)		
Communication		
Policy Development and Support		
Community Partnership Development		
Organizational Competencies		

	Point	
FOUNDATIONAL AREAS	Estimate	Range
Communicable Disease Control		
Chronic Disease and Injury Prevention		
Environmental Public Health		
Maternal/Child/ Family Health		
Access/Linkage with Clinical Health Care		

### **Costing Methodology (2/2)**

- Latin Hypercube Sampling
  - A sampling technique that will accurately recreate the probability distributions specified by distribution functions in fewer iterations, when compared with Monte Carlo sampling.
    - All possible values in input distribution are "sampled" for use in calculating total FPHS Costs (i.e. output values).
    - Output distribution generated from output values computed from "bins" or sets of scenarios containing all possible input values.
    - Iteration Each time the outcome value is recalculated using a new set or combination of possible input values (i.e. cost estimate of each FPHS category)
- Sensitivity Analysis
  - Determine which inputs (i.e. FPHS categories) have the greatest impact on overall FPHS costs

#### **Costing Methodology Outputs**

- Methodology produces a *cost distribution* for each Foundational Capability (FC) and Foundational Area (FA) specified in the National FPHS Definition document
- Separate estimates of "current" and "projected" costs
   Current: cost of resources currently used to produce FCs and FAs
  - **Projected**: cost of resources estimated to be required to fully meet FC and FA definitions, based on current levels of attainment

### **Costing Methodology Outputs**

### Foundational Capabilities (FCs) Costs

- Health Assessment
- Emergency Preparedness
- Communications
- Policy Development and Support
- Community Partnership Development
- Organizational Competencies

### Foundational Areas (FA) Costs

- Communicable Disease Control
- Chronic Disease & Injury Prevention
- Environmental Health
- Maternal and Child Health
- Access and Linkage to Clinical Care
- Total costs =  $\sum FC + \sum FA$

# **Comparison of Cost Estimates**

#### Washington PHIP - BERK Foundational Cost Report

- \$328 million total annual cost projected (state+local)
- \$165 million local annual cost projected
- \$47 total per capita cost projected
- \$24 local per capita cost projected

### Kentucky Pilot Project Baseline (i.e. most likely)

- \$286 million local annual current cost
- \$65 local per capita current cost
- State cost estimates TBD

Other State Estimates (different definitions & methods)

- Ohio: \$32 local per capita current cost
- Colorado: \$37 local per capita current cost

# **Next Steps: National Estimates**

- National stratified, nested sample of state and local jurisdictions
- Selection of 6 states stratified by administrative structure:
  - Centralized: AR, SC
  - Shared: FL, GA (KY)
  - Decentralized: NY, CA (WA)
- Selection of 3 local jurisdictions in each state, stratified by population: <50k | 50-299k | >=300k
- Supplement data already collected from KY, WA
- Web-based survey administration with telephone support
