Key words: galaxies: abundances – galaxies: haloes – galaxies: individual: NGC 4494 – galaxies: kinematics and dynamics.

This is an erratum to the paper entitled “Global properties of ‘ordinary’ early-type galaxies: photometry and spectroscopy of stars and globular clusters in NGC 4494”, published in MNRAS, 2011, 415, 3393.

The words ‘blue’ and ‘red’ were swapped when describing the relative globular cluster numbers for each subpopulation in the

original manuscript. Hence, the relevant sentence in Section 3.2.2 on page 3403 should read as follows: ‘This yields an estimated number of GCs of 392 ± 49 , 324 ± 74 and 125 ± 10 for all, blue and red GCs, respectively.’ These numbers are now in line with what can clearly be inferred from figs 10 and 11 of the original manuscript.
