Abstract: Unpublished papers, white papers and teaching materials can be a source for increasing the author’s visibility. Getting author's documents (the full range of work produced by scholars and researchers) under control is a key driver to enhance research visibility and impact. With a document publishing tools, authors can put all of their key documents online, where they are immediately accessible to the researchers that need them. By storing documents online researchers can disseminate their research output. I will introduce some of document publishing tools in this workshop.

Supporting Factors

✓ Early pre-publication and general free access
✓ Search engine optimization
✓ Sharing data sets
✓ Tailored distribution on social media
✓ Use alternative formats (e.g., video, infographics, audioslides)

Open the full range of work produced by scholars and researchers

• It’s not only journal articles you can share. Consider making all your scholarly outputs available online.

Expand the scope of your papers to wider audiences across disciplines and industries to extend your outreach and usage.

Institutional repositories provide an ideal medium for scholars to move beyond the journal article.

Reflecting on their experiences supporting the growth of Columbia University's Academic Commons digital repository, Leyla Williams, Kathryn Pope, and Brian Luna Lucero make a clear case for why other institutional repositories should look to broaden the scope of the materials they house.

Institutional repositories (IRs) should actively collect the full range of work produced by scholars and researchers — not just “green” versions of peer-reviewed journal articles but student theses, data, working papers, blog posts, and more. In doing so, IRs become vital platforms that leverage the potential of the Web to reach a broader audience, bring new voices to scholarly discourse, and create opportunities for collaboration.
How to Increase Citations of Your Scientific Articles

Not only non-technical articles lead people to your technical papers, but they will generally raise your scientific profile on the internet.

Virtual Communities and Mobile Devices

Tom Stewart, Executive Chairman of System Concepts, is founding editor of the research journal Behaviour and Information Technology which was established 30 years ago this year. Technology has changed dramatically in that time but understanding how to design interfaces which are effective, efficient and satisfying for users is still a challenge.

There are two themes in this issue of Behaviour and Information Technology - Vol 30 Issue 5 – virtual communities and mobile devices. In this editorial, Tom explores some of the benefits and pitfalls when both themes come together:

Collaborative Virtual Classroom: A perspective view of a Collaborative Virtual Classroom via Google App Engine

Abstract

The use of virtual worlds for supporting education is widespread and increasing. One application of prime interest is education as evidenced by numerous studies. The present study will use Google App Engine to show how it can become a powerful collaborative tool of a great value in the hands of the educators and how it can be used to efficiently create a collaborative virtual classroom. A first simple scenario with Google Docs will be tested and the results will be discussed.
Figshare-A self-publishing service

Figshare is a repository where users can make all of their research outputs available in a citable, shareable and discoverable manner. This service allows users to upload any file format to be made visualisable in the browser so that figures, datasets, media, papers, posters, presentations and filesets can be disseminated in a way that the current scholarly publishing model does not allow.

Approved Providers and Content Types for Work Samples on Your Profile

What are the compatible file types and content providers for media samples on my profile?

A new feature is gradually being released to all members that allows you display samples of your work on your profile. This is done by uploading a file or adding a link to existing content on a third-party site.

Here's a list of approved content providers and content types. Click each heading to expand or contract the list.

- **Image Providers:**

- **Video Providers:**

- **Audio Providers:**

- **Presentations and Documents:**
  - Prezi

The Internet Archive is a non-profit that was founded to build an Internet library. Its purposes include offering permanent access for researchers, historians, scholars, people with disabilities, and the general public to historical collections that exist in digital format. Founded in 1996. Now the Internet Archive includes texts, audio, moving images, and software as well as archived web pages in our collections, and provides specialized services for adaptive reading and information access for the blind and other persons with disabilities. (Example)
