Abstract

“[Research Tools](#)” can be defined as vehicles that broadly facilitate research and related activities. “[Research Tools](#)” enable researchers to collect, organize, analyze, visualize and publicized research outputs. Dr. Nader has collected over 700 tools that enable students to follow the correct path in research and to ultimately produce high-quality research outputs with more accuracy and efficiency. It is assembled as an interactive Web-based mind map, titled “Research Tools”, which is updated periodically. “[Research Tools](#)” consists of a hierarchical set of nodes. It has four main nodes: (1) Searching the literature, (2) Writing a paper, (3) Targeting suitable journals, and (4) Enhancing visibility and impact of the research.

Problem statements

The search can be time consuming and sometimes tedious task. How can make it easier? How do deal with situations such as:

- “I just join as a new postgraduate student and I am not sure how to do a literature search”
- “I have been in research for some time now but I spend a lot of time to get the articles I want”
- “I am sure I have downloaded the article but I am not able to find it”
- “I wanted to write a new paper, how can I manage the references in the shortest possible time?”
- “I have many references, some of my old papers, and some of my current research. Sometimes, they are so many that I can’t recall where I have kept them in my folders!”
-
- “I have written an article and I am not able to find a proper Journal”
- “I want to increase the citation of my papers, how do I do?”

Objectives

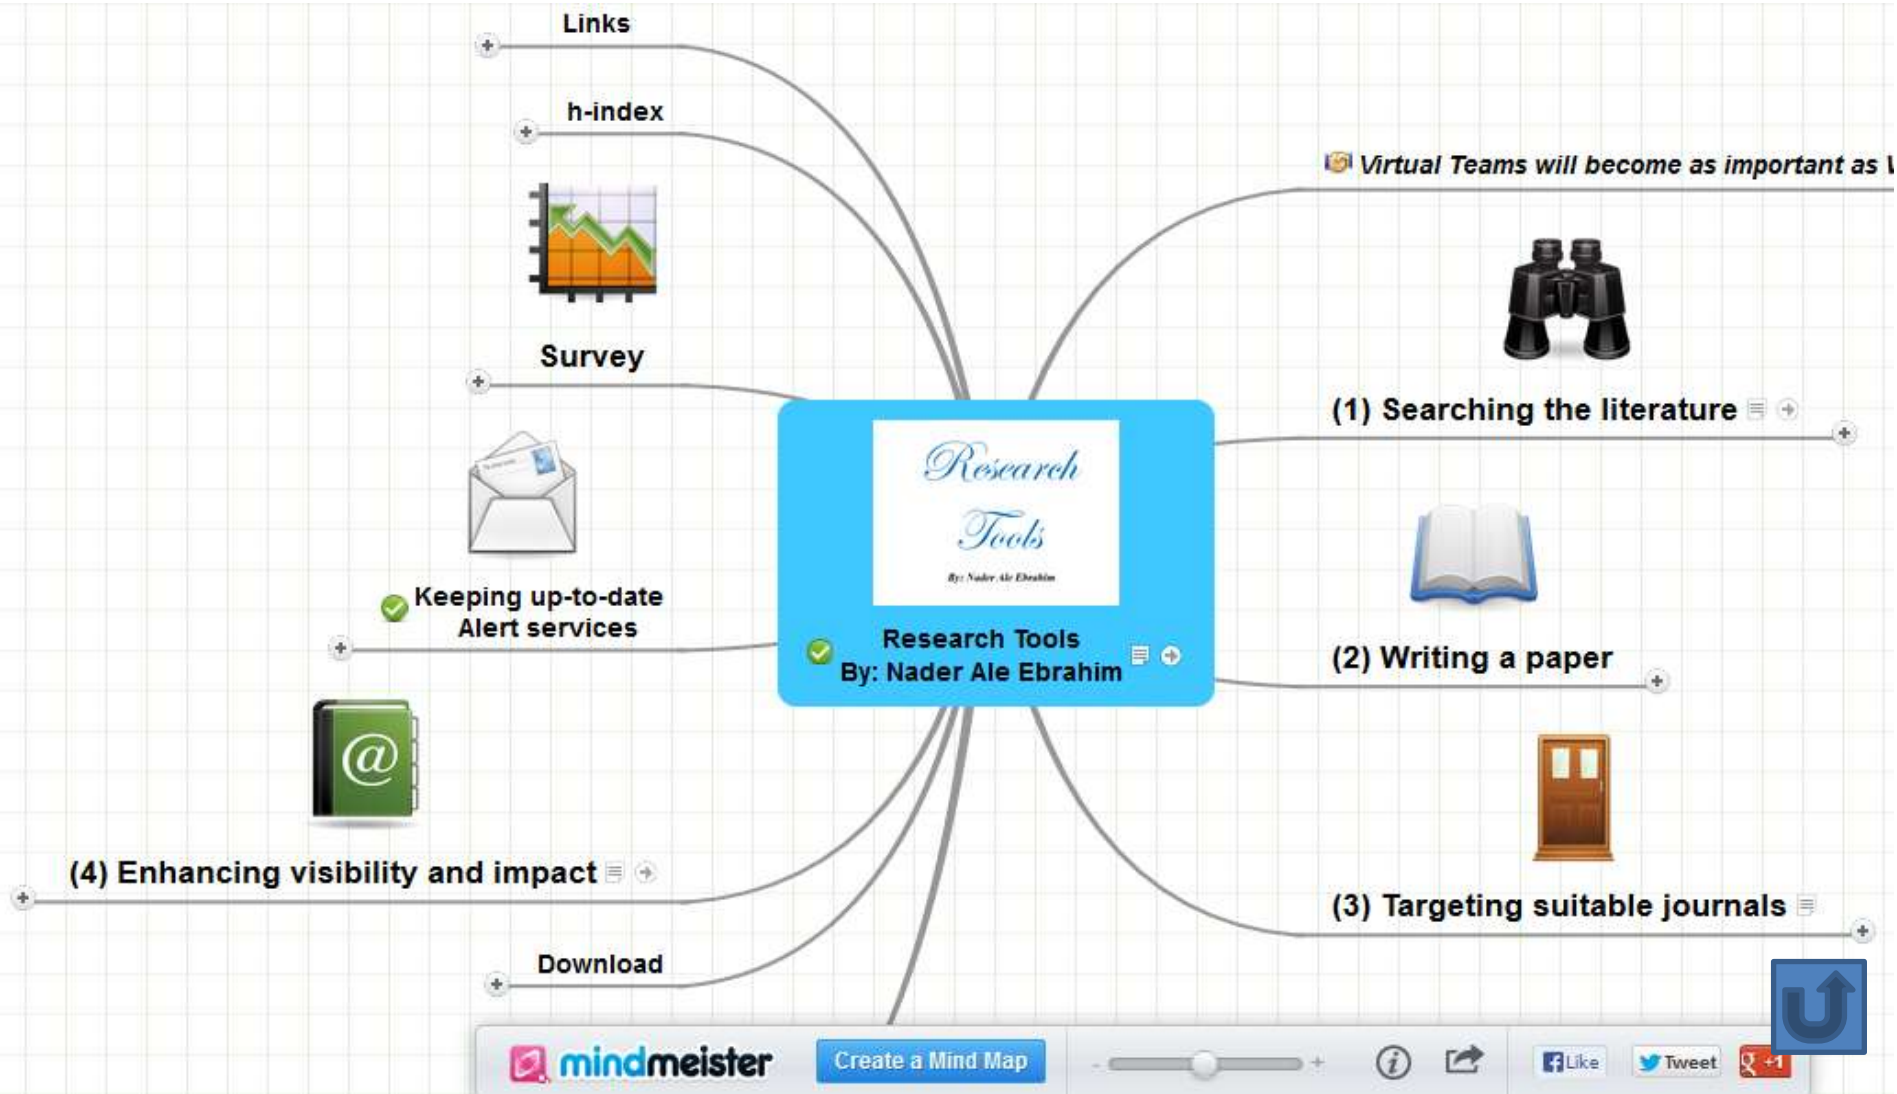

The seminar seeks to serve the following objectives:

- i. To help students who seek to reduce the search time by expanding the knowledge of researchers to more effectively use the "tools" that are available through the Net.
- ii. To evaluate the types of literature that researchers will encounter.
- iii. To convert the information of the search for a written document.
- iv. To help researchers learn how to search and analyze the right journal to submit.
- v. To promote their publication for further citation.

Outline

1. [Introduce](#) [“Research Tools”](#) Mind Map
2. Finding keyword/s
3. [Finding](#) proper articles,
4. [Evaluate](#) a paper/journal quality
5. [Effective](#) literature search
6. [Keeping up-to-date](#) (Alert system), Indexing desktop search tools
7. [Writing a paper](#), The paraphrasing & editing tools, Avoid plagiarism
8. [Organize](#) the references (Reference management) tools
9. [Target](#) suitable journal
10. [Promote](#) your publications to get more citation
11. Q&A

MASTER KEYWORDS LIST

Journal of International Business Studies

The screenshot displays the website for the Journal of International Business Studies. The header includes the Palgrave Macmillan logo and the journal title. A navigation bar contains links for Institutional Registration, Admin Login, Personal Registration, My account, Subscribe, and E-alert sign up. Below the header, a search bar is present with a dropdown menu set to 'This journal' and a 'Go' button. The main content area is titled 'Journal home > Master list of keywords' and 'MASTER KEYWORDS LIST'. It features a list of categories: Research methods, Theories, and Topics. A text block explains that the master keyword list is split into these three categories and advises users to choose at least one keyword from each. A 'RESEARCH METHODS' section is highlighted with a blue bar and a 'Top' link. Below this, the 'Data Source' section lists 'Primary' and 'Secondary'. The 'Research Design' section lists 'Comparative Thinking', 'Construct Development and Evaluation', 'Cross-Cultural Experiments', 'Cross-Cultural Research/Measurement Issues', and 'Econometrics'. On the right side, there are links for signing up for e-alerts, recommending the publication, receiving RSS web feeds, and following on Twitter. A circular logo celebrating 45 years of the journal is also visible, along with the Academy of International Business logo.

Keywords and Keywords Plus®

Authors sometimes provide a list of keywords or terms that they feel best represent the content of their paper. These keywords are contained in the ISI record (1991 data forward, depending on the [database](#)) for each article and are searchable. In addition, ISI generates KeyWords Plus for many articles. KeyWords Plus are words or phrases that frequently appear in the titles of an article's references, but do not necessarily appear in the title of the article itself. KeyWords Plus may be present for articles that have no author keywords, or may include important terms not listed among the title, abstract, or author keywords.

Source: <http://wos.isitrial.com/help/helpdefs.html>

KeyWords Plus

Hi there! This issue, we are going to explain how **KeyWords Plus** broadens your search. **KeyWords Plus** is the result of our Thomson Reuters editorial expertise in Science.

What our editors do is to review the titles of all references and highlight additional relevant but overlooked keywords that were not listed by the author or publisher. With **KeyWords Plus**, you can now uncover more papers that may not have appeared in your search due to changes in scientific keywords over time.

Thanks and keep your feedback and questions coming!

Smiles,

[Lim Khee Hiang](#)

Ph.D., Principal Consultant

Effective literature search

To be the best, cite the best

Citation analysis picks out new truth in Newton's aphorism that science 'stands on the shoulders of giants'.

The mass of medium-level research is less important for inspiring influential breakthroughs than the most highly-cited papers, a citation study argues.

Source: Corbyn, Z. (2010). [To be the best, cite the best. Nature 539. doi: doi:10.1038/news.2010.539](https://doi.org/10.1038/news.2010.539)

Research Quality Measures

Three key measures of research impact are:

- 1. Quality of the journal** – journal rankings, impact factors
- 2. Quality of the publication/article** = times cited as found in tools like Web of Science, Scopus and Google Scholar
- 3. Personal or departmental measure = *h*-index**

Source: <http://guides.library.vu.edu.au/content.php?pid=251876&sid=2079929>

Critically Analyzing Information Sources

1- Initial Appraisal:

Author

Date of Publication

Edition or Revision

Publisher

Title of Journal (Distinguishing Scholarly Journals from other Periodicals)

2- Content Analysis:

Intended Audience

Objective Reasoning

Coverage

Writing Style

Evaluative Reviews

h -index ([Jorge E. Hirsch](#))

- A scientist has index h if h of [his/her] N_p papers have at least h citations each, and the other $(N_p - h)$ papers have at most h citations each.*

H-index from a plot of decreasing citations for numbered papers

The Many and Variable Uses of Publish or Perish (PoP)-

By: Anne-Wil Harzing –” Your guide to effective and responsible citation analysis”

Academics that need to make their case for tenure or promotion will find PoP useful to create reference groups and show their citation record to its best advantage. When **evaluating other academics**, PoP can be used as a 5-minute preparation before meeting someone you don't know, to evaluate editorial board members or prospective PhD supervisors, to write up tributes (or laudations) and eulogies, to decide on publication awards and to pre-prepare for a job interview. Deans and other academic administrators will find PoP useful to evaluate tenure or promotion cases in a fair and equitable way.

PoP can help you to do a quick literature review **to identify the most cited articles** and/or scholars in a particular field. It can be used to identify whether any research has been done in a particular area at all (useful for grant applications) or to evaluate the development of the literature in a particular topic over time. Finally, PoP is very well suited for doing bibliometric research on both authors and journals.

PoP can also be used to assist when you are uncertain **which journal to submit** it to. You can use it to get ideas of the types of journals that publish articles on the topic you are writing on and to compare a set of journals in terms of their citation impact. Once you have decided on the target journal, it can also help you to double-check that you haven't missed any prior work from the journal in question.

Paper/journal quality

- Another guide to paper/journal quality is the general reputation of the association, society, or organization publishing the journal.
- Leading professional associations such as American Psychological Association (APA) or the Institute of Electrical and Electronics Engineers (IEEE) publish a range of journals that are highly regarded.

STOP SEARCHING, START DISCOVERING

THOMSON REUTERS

The Institute for Scientific Information (ISI)

- The **Institute for Scientific Information** (ISI) was founded by [Eugene Garfield](#) in 1960. It was acquired by [Thomson Scientific & Healthcare](#) in 1992, became known as **Thomson ISI** and now is part of the Healthcare & Science business of the multi-billion dollar [Thomson Reuters Corporation](#).
- ISI offered [bibliographic database](#) services. Its speciality: [citation indexing](#) and analysis, a field pioneered by Garfield. It maintains citation databases covering thousands of [academic journals](#), including a continuation of its long time print-based indexing service the [Science Citation Index](#) (SCI), as well as the [Social Sciences Citation Index](#) (SSCI), and the [Arts and Humanities Citation Index](#) (AHCI). All of these are available via ISI's [Web of Knowledge](#) database service.

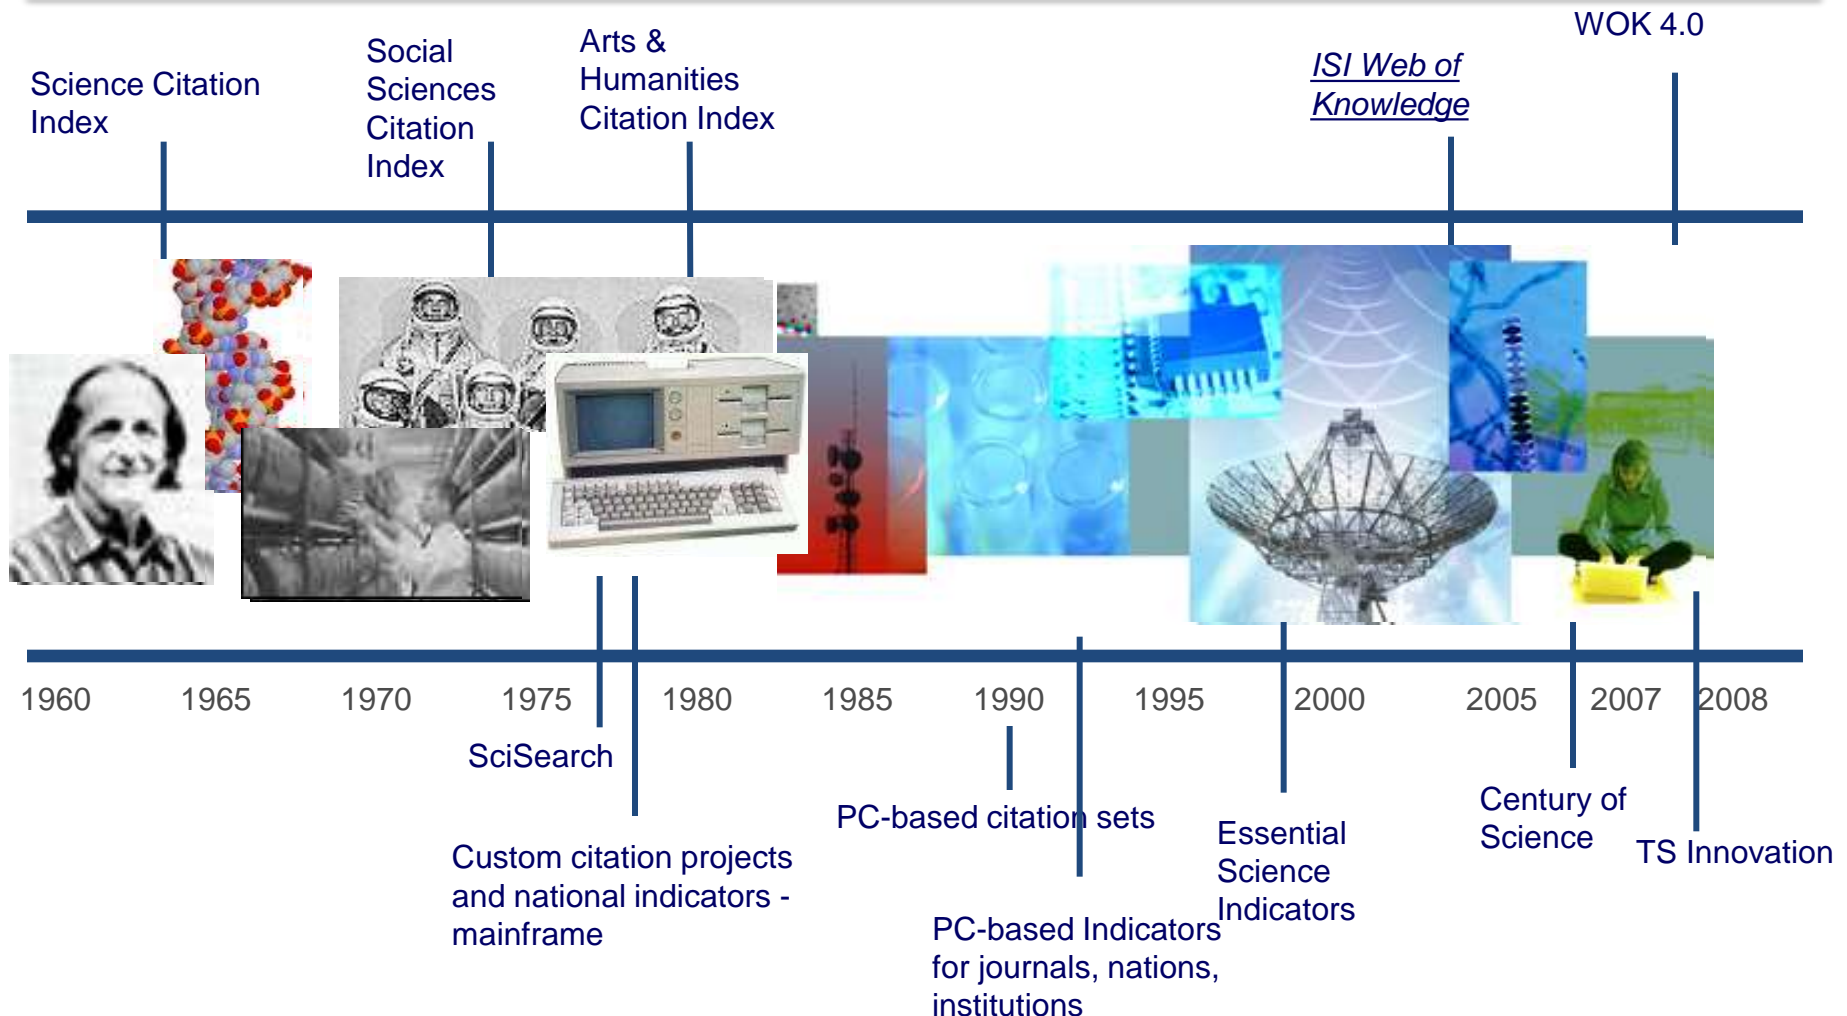

Eugene Garfield, Ph.D.

Founder & Chairman Emeritus
Institute for Scientific Information (ISI)

[For more Info](#)

Thomson Reuters (formerly ISI) has been the authority on citation data for over 50 years.

The Institute for Scientific Information (ISI)

- The ISI also publishes annual [Journal Citation Reports](#) which list an [impact factor](#) for each of the journals that it tracks. Within the scientific community, journal impact factors play a large but controversial role in determining the kudos attached to a scientist's published research record.

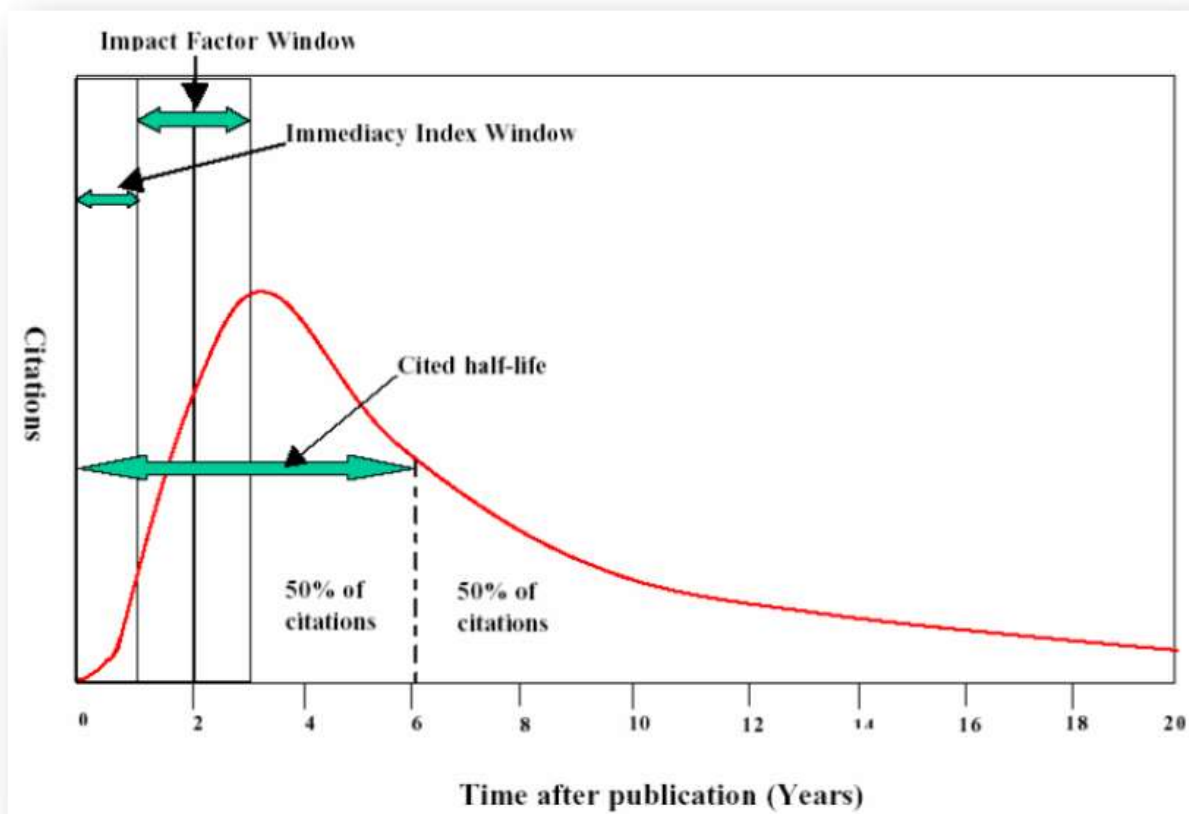

**A FAST AND EFFICIENT
SEARCH FOR A BETTER
DISCOVERY EXPERIENCE**

Thomson Reuters (formerly ISI)
Web of Knowledge is today's
premier research platform for
information in the sciences,
social sciences, arts, and
humanities.

Impact Factor

The most commonly used measure of journal quality is Impact Factor. This is a number which attempts to measure the impact of a journal in terms of its influence on the academic community. Impact Factors are published by Thomson-ISI.

Impact Factor and other bibliometric parameters

31

Source: **How to Write Great Papers From title to references From submission to acceptance (2012)** By: Anthony Newman, Publisher, Elsevier, Amsterdam

Impact Factor-Journal Ranking

- Relative impact factors are often a better guide to the importance of a journal than raw numbers. *JCR* allows you to compare the impact factors of different journals in the same subject area
- The *Economic History Review* has an impact factor of 1.051. At first glance, it would appear that this journal is relatively unimportant. In fact, it is arguably the premier English-language journal in its field (its major competitor, the *Journal of Economic History Review*, has an even lower impact factor: a mere 0.529!). Far more illuminating is the journal's relatively high impact factor compared to other journals in the history of the social sciences. *Economic History Review* ranks first out of 15 journals in the Thomson-ISI's list of journals in this sub-discipline.

Influences on Impact Factors: Subject Area

32

What are journal impact factors?

Impact factors are a measure of the "quality" of a journal - they identify the most frequently cited journals in a field.

Impact factors can be used to:

identify journals in which to publish

identify journals relevant to your research

confirm the status of journals in which you have published

The Impact factor formula

The impact factor of a journal is based on the average number of times that articles published in that journal in the two previous years (e.g. 2008 and 2009) were cited in the subsequent year (i.e. 2010). This is calculated using the following formula:

$$= \frac{\text{Cites in 2010 to items published in 2008 and 2009}}{\text{Number of items published in 2008 and 2009}}$$

If an impact factor is lower than 1.0 that means there were more articles published in the journal than there were cites to those articles in any given year.

Be aware that...

- Many journals do not have an impact factor (sources other than JCR need to be consulted).
- The impact factor cannot assess the quality of individual articles.
- Only research articles, technical notes and reviews are “citable” items. Editorials, letters, news items and meeting abstracts are “non-citable items”.

Journal Metrics

As journal metrics become more and more important for scientists and their institutions, Copernicus Publications decided to present the four most important ones. A short explanation is listed below. For further information please visit the individual websites of Thomson Reuters SCOPUS, and Google Scholar Metrics.

It is important NOT to compare the different journal metrics, as the results stem from different calculations. As a comparison, the 2012 journal metrics for "Nature Geoscience" are listed:

IF 12.367

5-year IF 12.905

SNIP 3.192

SJR 5.493

Source: http://publications.copernicus.org/services/journal_metrics.html

Thomson Reuters Impact Factor

- The annual Journal Citation Report Impact Factor is a ratio between citations and recent citable items published. Thus, the impact factor of a journal is calculated by dividing the number of current year citations by the source items published in that journal during the previous two years.
- The 5-year impact factor is calculated by applying the counted articles to the previous five years.
- Source: [Thomson Reuters](#)

SCOPUS SNIP

- The Source Normalized Impact per Paper (SNIP) measures contextual citation impact by weighting citations based on the total number of citations in a subject field. The impact of a single citation is given higher value in subject areas where citations are less likely, and vice versa.
 - Measures contextual citation impact by "normalizing" citation values;
 - Takes a research field's citation frequency into account;
 - Considers immediacy – how quickly a paper is likely to have an impact in a given field;
 - Accounts for how well the field is covered by the underlying database;
 - Calculates without use of a journal's subject classification to avoid delimitation;
 - Counters any potential for editorial manipulation.

SCOPUS SJR

- The SCImago Journal Rank (SJR) is a prestige metric based on the idea that "all citations are not created equal". With SJR, the subject field, quality and reputation of the journal has a direct effect on the value of a citation.
 - Is weighted by the prestige of the journal, thereby "leveling the playing field" among journals;
 - Eliminates manipulation: raise the SJR ranking by being published in more reputable journals;
 - "Shares" a journal's prestige equally over the total number of citations in that journal;
 - Normalizes for differences in citation behavior between subject fields.
- Source: [SCOPUS](#)

Google Scholar Metrics

- The h-index of a publication is the largest number h such that at least h articles in that publication were cited at least h times each. For example, a publication with five articles cited by, respectively, 17, 9, 6, 3, and 2, has the h-index of 3.
- The h5-index of a publication is, respectively, the h-index, of only those of its articles that were published in the last five complete calendar years.
- Source: [Google Scholar](https://scholar.google.com/metrics)

Web application to calculate the single publication h index

Keeping up-to-date (Alert system)
&
Indexing desktop search tools

Keeping up-to-date

Alert services are an effective means of keeping track of the latest research.

What is an alert service?

- Many journal databases and book publishers offer free alert services. These are an effective means of keeping track of the latest research.
- Alert services come in different forms. The most common include:
 - a search alert. This is a saved search which alerts you when a book or article that matches your search terms is published.
 - a TOC (Table of Contents) alert. Such an alert notifies you when a new issue of a journal is published, and provides you with the issue's table of contents.
 - a citation alert. This advises you when a new article cites a particular work.
 - Most alert services are email-based. An increasing number are now offered as an RSS feed. If you are just beginning, you might like to try email alerts first. These are generally easier to create.

Why subscribe to an alert service?

There is often a time delay between the point when a new article is published in a journal and it is indexed by one of the database services. Alert services will automatically keep you informed of new journal issues and articles on your topic or research interest when **new relevant material is made available**. Many of the large online research databases provide an automated alerting service.

Before using any current awareness services you should review the literature to establish a clear awareness of the topic that you would like to be kept up-to-date with on a regular basis. In this way you will increase the relevancy of the alerts you receive to your area of research. You can receive automated updates of newly published journal articles via email alert or via RSS Feed. stances and offers related research propositions. The paper also discusses the role of the Internet in **new product** performance. Finally, the paper concludes with managerial and research implications.

1. **new product development** process and the role of the Internet

Past research has consistently shown that a high-quality **new product development** process is one of the most critical success factors in **new product development** [8,10–12]. As a result, it has offered numerous processes that firms can use when developing their **new products**. Cooper [13] defines a **new product development** process as a formal blueprint, roadmap, template or thought process for driving a **new product** project from the idea to market launch and beyond. The process involves predetermined set of stages and each stage consists of a set of prescribed, cross-functional and parallel activities. Each stage is preceded by a gate, controlling the flow of the process and providing a decision checkpoint in the process. Because of the stages and the

with the first and second-generation processes, the third-generation process emphasizes efficiency and effectiveness in the **new product development** process through four fundamental areas. First, it is fluid, which means that there are overlaps in stages for greater speed. Second, it involves fuzzy gates, reducing the rigidity of criteria used in the gates and allowing conditional or situational considerations of the activities. Third, it is more focused in terms of prioritizing projects. Finally, it is flexible, suggesting that each **new product** is unique and has its own unique **development** process [13].

There are also compelling issues that indicate that **new product development** process may not be uniform across firms and **products**. Takeuchi and Nanoka [14] argue that today's rapidly changing and competitive market conditions require firms to adopt a flexible and fast **new product development** process and that a holistic "rugby" style **new product development** might be needed to respond to the conditions. With this approach, **new product teams** move through all phases of the **development** together, passing the ball back and forth as they develop **new products**. Based on a case study, the authors concluded that it is possible to

We **reports** the relevant result of an online survey study.

Approve

We report the relevant result of an online survey study.

Abstract—In this paper, we present our more than two years research experiences on virtual R&D teams in small and medium-sized enterprises (SMEs) and draws conclusions, giving special attention to the structure of virtual teams required to support education-industry collaboration. We reports the relevant result of an online survey study. The online questionnaire was emailed by using the simple random sampling method to 947 manufacturing SMEs. The findings of this study show that SMEs in Malaysia and Iran are willing to use virtual teams for collaboration and the platform for industry-education collaboration is ready and distance between team members or differences in time zones, are not barriers to industry-education collaborations.

How do I avoid plagiarism?

- only hand in your own and original work.
- indicate precisely and accurately when you have used information provided by someone else, i.e. referencing must be done in accordance with a recognised system.
- indicate whether you have downloaded information from the Internet.
- never use someone else's electronic storage media, artwork, pictures or graphics as if it were your own.
- never copy directly without crediting the source
- do not translate without crediting the source
- do not paraphrase someone else's work without crediting the source
- do not piece together sections of the work of others into a new whole
- do not resubmit your own or other's previously graded work
- do not commit collusion (unauthorised collaboration, presenting work as one's own independent work, when it has been produced in whole or in part in collusion with other people)
- ghost-writing – you should not make use of ghost writers or professional agencies in the production of your work or submit material which has been written on your behalf

10 Major source of plagiarism

1. **Replication:** Submitting a paper to multiple publications in an attempt to get it published more than once
2. **Duplication:** Re-using work from one's own previous studies and papers without attribution
3. **Secondary Source:** Using a secondary source, but only citing the primary sources contained within the secondary one
4. **Misleading Attribution:** Removing an author's name, despite significant contributions; an inaccurate or insufficient list of authors who contributed to a manuscript
5. **Invalid Source:** Referencing either an incorrect or nonexistent source
6. **Paraphrasing:** Taking the words of another and using them alongside original text without attribution
7. **Repetitive Research:** Repeating data or text from a similar study with a similar methodology in a new study without proper attribution
8. **Unethical Collaboration:** Accidentally or intentionally use each other's written work without proper attribution; when people who are working together violate a code of conduct
9. **Verbatim:** copying of another's words and works without providing proper attribution, indentation or quotation marks
10. **Complete:** Taking a manuscript from another researcher and resubmitting it under one's own name

Accepted 4 December 2005; received in revised form 1 May 2006; accepted 8 May 2006

Internet Protocol Television (IPTV), the convergence of television and Internet, is being rapidly developed around the world. The advent of digital television has changed the convergent market dramatically with the wide diffusion of the convergent services. In this study, the Technology Acceptance Model as a conceptual framework and method of logistic regression analysis are used to analyze the demand for IPTV by drawing data from 452 consumers. Individuals' responses to questions about whether they accept IPTV are collected and combined with observations of their socio-economic characteristics and extrinsic/extrinsic factors modified from the Technology Acceptance Model. Results of the logistic regression model show two variables (extrinsic and extrinsic factors) that seem to explain what influences consumers' decisions to accept IPTV. The results of the logistic regression model explain about 50% of the variance in the IPTV adoption. The outcomes shed light on the multi-ops platform environment that IPTV will forge.

Abstract

Penalty for Plagiarism

Outside of academia the problem of plagiarism continues to generate headlines and scandals for politicians. In Germany, two prominent cabinet members have been forced to [step down](#) due to allegations of plagiarism in their doctoral dissertations. Meanwhile, in Canada, the head of the nation's largest school district was forced to [resign](#) in the face of plagiarism allegations, and plagiarism scandals have also embroiled a [senator](#) in the Philippines, the [prime minister](#) of Romania, and [several members](#) of the Russian Duma.

Source: J. Bailey. "Defending Against Plagiarism, Publishers need to be proactive about detecting and deterring copied text.," 26 November; <http://www.the-scientist.com/?articles.view/articleNo/35677/title/Defending-Against-Plagiarism/>.

Full Length Research Paper

Computational study of environmental fate of ionic liquids using conductor-like screening model for real solvents (COSMO-RS) method

Zakari, A. Y., Waziri, S. M., Aderemi, B. O. and Mustapha, S. I.*

Department of Chemical Engineering, Ahmadu Bello University Zaria, Nigeria.

The COSMO-RS method is an advanced method for the quantitative calculation of solvation mixture thermodynamics based on quantum chemistry. It was developed by Andreas Klamt and is distributed as the software COSMOtherm by his company COSMOlogic (as well as in the form of several remakes by others).

Some Nigerian researchers have used the software (without a license) and report a tremendously and completely unbelievably good correlation ($r^2=0.992$) between the predicted results and experimental data for the logKow (octanol water partition coefficient) of ionic liquids.

We use plagiarism Detection

The screenshot displays the 'Instructions for authors' page of the Journal of the Operational Research Society. The page lists various research areas: Training, Travelling salesman, Vehicle routing, Transport, Urban studies, and Water. It prominently features the C O P E (Committee on Publication Ethics) logo and a blue badge stating 'We Use Plagiarism Detection iThenticate® Learn More »'. Below this, a text line reads: 'This journal is a member of and subscribes to the principles of the [Committee on Publication Ethics](#).' The footer includes the journal's ISSN (0160-5682) and EISSN (1476-9360), along with links for 'About Palgrave Macmillan', 'Contact Us', 'Legal Notice', 'Privacy Policy', 'Accessibility Statement', 'RSS Web feeds', and 'Help'. A copyright notice for 2011 Palgrave Macmillan is also present, mentioning its partnership with INASP, JDP, CrossRef, COUNTER, COPE, and iThenticate. The browser window shows the URL 'http://www.palgrave-journals.com/jors/author_instructions.html' and the Mozilla Firefox interface.

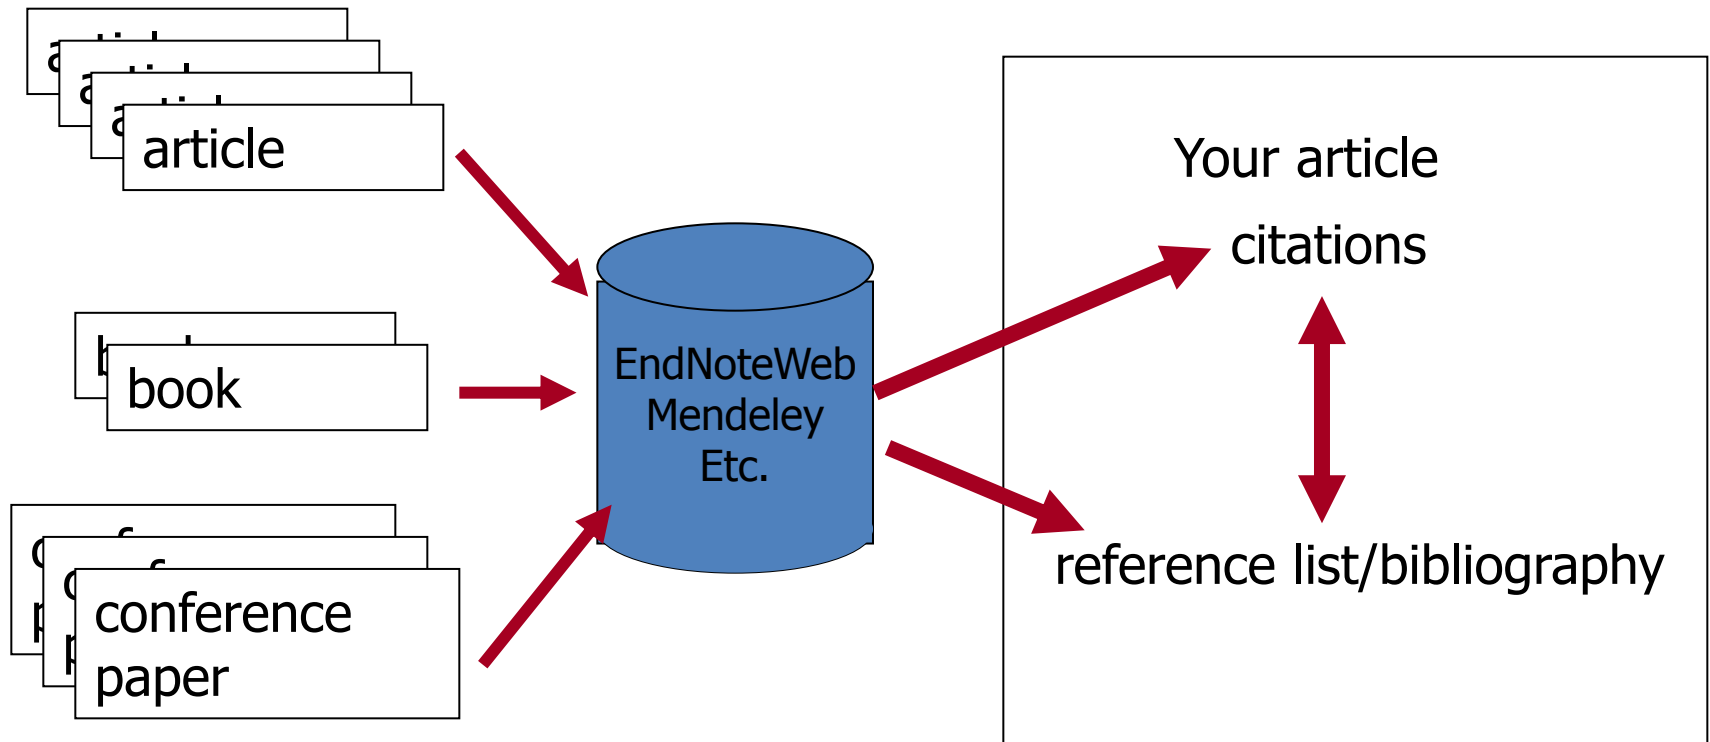

Organize the references

Writing a Thesis/Paper: Traditional way

Source: flickr/toennessen

Use a reference management tool!

Source: Managing References: Mendeley By: HINARI Access to Research in Health

EndNote

- *EndNote* is an almost indispensable tool for the serious researcher. And best of all, its free to all UM postgraduates!

Why use *EndNote*?

- *EndNote* allows you to create your own reference library. This library can be used to store the bibliographical details relating to the articles and books that you use. When it comes time to write your thesis, you can employ the library to insert references into your text and produce your bibliography. *EndNote* will save you hundreds of hours over the course of your research.

EndNote X1 - New Reference

"Research Tools": Tools for supporting research and publications © Nader Ale Ebrahim 2014-2015

Small and medium enterprises (SMEs) are the driving engine behind economic growth [1].

References

- [1] N. Ale Ebrahim, S. Ahmed, and Z. Taha, "Virtual R & D teams in small and medium enterprises: A literature review," *Scientific Research and Essay*, vol. 4, pp. 1575–1590, December 2009.

Why *EndNote Web*?

EndNote Web can help you to manage your references in a simple two-steps process ...

- Step 1: Manage references
 - Collect references
 - Organize, share and collaborate
- Step 2: Format references
 - Cite references while writing (*Cite While You Write*)
 - Get reference list generated automatically
 - Change the reference style in few clicks!

How to start?

Here are the simple steps to make your writing experience a happier one ...

1. Create a **free** *EndNote Web* account
2. Collect references from *Web of Science* and various databases
3. Manage, organize and share references
4. Download and installing the “*Cite While You Write*” Plug-in (only do it once!)
5. Inserting your references and **be a happy writer!**
... because references are automatically generated and you can change the style with just few clicks!

Qiqqa: Free reference manager and research manager

The screenshot shows the Qiqqa application window. On the left is a sidebar with navigation tabs labeled '1. THE AND: SKILL: SKI', '2. THE AND: CONCEPT:', '3. THE AND: COURSE:', '4. THE AND: FIELD: MAC', '5. AND: THE CHILDREN:', '6. THE CONCEPTUAL: CI', '7. THE AND: CONCEPT:', '8. AND: STUDENTS: GRA', '9. THE STUDENTS: STUD:', '10. TRAINING: TRAINING:', '11. SCHOOL: STUDENTS:', '12. THE AND: QUANTIT:', '13. THE AND: THEORY: T', '14. THE AND: ANALYSIS:', '15. SCIENCE: SCIENCE: A', '16. THE AND: MODEL: N', '17. THE AND: IF: POINT:'. The main area displays a document titled 'Mathematical modelling of cytokine-mediated inflammation in rheumatoid arthritis' by Michelle Baker, published in 'Mathematical Medicine and Biology' (2013) 30, 311-337. Below the title is a pie chart titled 'THEMES IN THIS DOCUMENT' with a legend: '16. the and: Model: model: mathematical', '17. the and: intervention: intervention: Treggert', '34. the and: Water: water: pressure: Others'. The right-hand pane shows 'DOCUMENTS RELEVANT TO THIS DOCUMENT' with a list of related papers.

Sort Tags

The screenshot shows the Expedition software interface. The top bar includes navigation icons for Home, multifactorial Library, Expedition, and a search bar. Below the top bar, there are tabs for Add PDFs or References, Sync Library, Bi-Pet, Annotation Report, and Tutorial. The main area is divided into three sections:

- Left Sidebar (Tags):** A list of tags for filtering documents. The 'AND' button is selected. The 'Sort' button is also visible. The tags include: physics education (151), Physics (42), Education (41), Multidisciplinary (41), Scientific Disciplines (40), Teaching (17), student experiments (14), science (12), physics (10), educational courses (9), problem solving (8), gender (8), research (7), students (6), mechanics (6), performance (5), further education (5), instruction (5), knowledge (5), mathematics (5), introductory physics (5), achievement (5), quantum theory (5), education (5), classroom (4), science education (4), astronomy (4), math (4), computer aided instruction (4), conceptual understanding (3), graphs (3), models (3), experts (3), experiments (3), teachers (3), Engineering (3), SYSTEMS (3), educational aids (3), conceptual change (3), and context (3).
- Main Area (Library):** A list of documents. The library is currently filtered by the tag 'physics education' (151 matching documents). The documents are listed with their titles, authors, and publication years. The first few documents are:
 - Why do bubbles in Guinness sink?** by Benito, E. S. and Cummins, C. P. and Lee, W. T. (2013)
 - Wave transmission through periodic, quasiperiodic, and random one-dimensional finite lattices** by Grynberg-Meloni, P. (2013)
 - Variations on the adiabatic invariance: The Lorentz pendulum** by Sanchez-Soto, L. L. and Zoda, J. (2013)
 - Variables Affecting Physics Achievement** by Lawler, F. and Wood, N. B. and Kirchoff, A. and Kim, N. K. and Eisenkraft, A. (2009)
 - Using the XBox Kinect sensor for positional data acquisition** by Belister, J. and Pharr, C. (2013)
 - Using the education strategy with directing questions in the teaching period sample lesson: One dimensional motion** by Karaman, I. (2010)
 - Using gif (Graphics Interchange format) images in physics education** by Bulbul, M. S. (2007)
 - USING CONCEPT MAPS AS AN ASSESSMENT TOOL IN PHYSICS EDUCATION** by Reyes, S. K. (2008)
 - Using a mobile phone acceleration sensor in physics experiments on free and damped harmonic oscillations** by Castro-Palacio, J. C. and Velazquez-Albel, L. and Gomez, M. H. and Monzon, J. A. (2013)
 - USING A DISCIPLINARY DISCOURSE LENS TO EXPLORE HOW REPRESENTATIONS AFFORD MEANING MAKING IN A TYPICAL WAVE PHYSICS COURSE** by Enghag, M. and Mässon, E. and Forsman, J. and Linder, C. and MacKinnon, A. and Enghag, M. and Linder, C. (2013)
 - Using a commercial game engine to produce physics educational materials** by Price, C. (2007)
 - Uses of the past: Reflections on United States physics curriculum development 1955 to 1990** by Arons, A. B. (1993)
 - USES OF THE PAST - REFLECTIONS ON UNITED STATES PHYSICS CURRICULUM DEVELOPMENT, 1955 TO 1990** by Arons, A. B. (1993)
- Right Sidebar (Instructions):** A text box explaining the functionality of the tags and document list. It states: "The list on the left shows all those documents that match your current search and also choices. Generally, running tests from the toolbar (e.g., annotation reports, exports, etc.) will only run on this subset of your library." It also provides instructions on how to right-click a document to get options to perform on just that document, or if you have selected multiple documents, on that set of documents. It lists four ways to select documents:
 - Ticking the checkboxes to the left of each document.
 - Holding down CTRL while clicking on various documents.
 - Holding down SHIFT while clicking on a document, which will select the range of documents.
 - Clicking a document, and pressing CTRL-A, which will select ALL the documents in the list.
 It also mentions that you can drag-and-drop documents onto brainstorms or into other libraries by clicking on the PDF icon and dragging.

Where should I submit my publication?

If you want your article to ...

- Publish in most influential or highly cited journal
 - Use Impact Factor or
 - 5 Year Impact Factor (for subjects need longer citation period, e.g. GEOLOGY or MANAGEMENT or SOCIOLOGY, etc)
- To reach out to readers and be read immediately
 - Use Immediacy Index
- Stay active in journal collection
 - Use Cited Half Life

Note: The above only serves as general guidelines, deeper understanding of JCR, the subjects and dynamic publication cycles are crucial when deciding where to publish your paper.

Promote your publications

Strategies for Enhancing the Impact of Research

Improving access and retrieval of your research study is the surest way to enhance its impact. Repetition, consistency, and an awareness of the intended audience form the basis of most the following strategies.

[Preparing for Publication](#)

[Dissemination](#)

[Keeping Track of Your Research](#)

[Source: Washington University School of Medicine, St. Louis Missouri](#)

Strategies for Enhancing the Impact of Research Dissemination

- Submit the manuscript to a digital subject repository.
- Submit the manuscript to an institutional repository.
- Set up a web site devoted to the research project and post manuscripts of publications and conference abstracts.
- Take advantage of SEO (search engine optimization).
- Present preliminary research findings at a meeting or conference.
- Follow up preliminary research findings presented at a meeting or conference with a published manuscript.
- Consider submitting the same article to a journal in a different language as a “secondary publication.”
- Start a blog devoted to the research project.
- Contribute to Wikipedia.
- Contribute to a social network

[Source: Washington University School of Medicine, St. Louis Missouri](#)

8 Ways to increase usage and citation of published papers

1. Create your own website
2. Create Mind Map
3. Do Search Engine Optimization (SEO)
4. [Contribute to Wikipedia](#)
5. Join Twitter
6. Join academic social networking sites
7. [Join LinkedIn](#)
8. Deposit papers in repositories

Repositories can disseminate information

Universities can:

- meet accountability requirements
- improve the brand image of the university
- preserve academic research outputs permanently and effectively
- promote co-operation with industry and contribution to the local communities
- reduce the costs of taking charge of academic information

Researchers can:

- gain greater visibility for their research achievements
- establish the channel for the dissemination of research outputs
- reduce the cost of preservation and dissemination of research outputs
- raise the citation rates of their articles

[Source: What is an academic repository?](#)

Optimize citations

- *Put your article in an institutional or subject repository.*
- *Publicize yourself - link to your latest article in your email signature.*
- Make your article more accessible
- Make your article more visible
 - Reading lists
 - Department website or personal webpage
 - Twitter and Facebook
 - LinkedIn
 - Join academic social networking sites
 - CiteULike
 - Email signature

Source: Optimize citations - <http://journalauthors.tandf.co.uk/beyondpublication/optimizingcitations.asp>

And

Promote your article - <http://journalauthors.tandf.co.uk/beyondpublication/promotearticle.asp>

Why should you share links to your published work online?

According to Dr Melissa Terras from the University College London Centre for Digital Humanities, “If you tell people about your research, they look at it. Your research will get looked at more than papers which are not promoted via social media” ([2012](#)).

Digital Curiosities: Resource Creation Via Amateur Digitisation

Enabled backchannel: conference Twitter use by digital humanists Not Me

Framework for effective public digital records management in Uganda

Library and information resources and users of digital resources in the huma

A Virtual Tomb for Kelvingrove: Virtual Reality, Archaeology and Education

What do faculty and students really think about e-books? Not me

Documentation and the users of digital resources in the humanities

Classification in British public libraries: a historical perspective Not me

Teaching TEI: The Need for TEI by Example

Should we just send a copy? Digitisation, Use and Usefulness

The Kardashian index: a measure of discrepant social media profile for scientists

$$F=43.3C^{0.32}(1)$$

Where F is the number of twitter followers and C is the number of citations.

As a typical number of followers can now be calculated using this formula, Hall (2014) proposed that the Kardashian Index

(K-index) can be calculated as follows:

$$K\text{-index}=F(a)/F(c)$$

Where $F_{(a)}$ is the actual number of twitter followers of researcher X and $F_{(c)}$ is the number researcher X should have given their citations. Hence a high K-index is a warning to the community that researcher X may have built their public profile on shaky foundations, while a very low K-index suggests that a scientist is being undervalued. Here, Hall (2014) proposed that those people whose K-index is greater than 5 can be considered 'Science Kardashians'

New Article Acceptance: Multiagent Systems as a Team Member

I have received notice that my article titled *Multiagent Systems as a Team Member* will be published by Common Ground Publishing in their journal: *The International Journal of Technology, Knowledge, and Society*. The web page for the journal follows: <http://ijt.cgpublisher.com>

No date as to when the article will be published but it should be this fall. Listed below is the abstract for the journal article to give those interested an indication of what the article is about.

Abstract

With the increasing complex business environment that organizations have to operate in today, teams are being utilized to complete complex tasks. Teams
