http://scholar.google.com/citations
Abstract:
Do you know “Over 43% of ISI papers have never ever received any citations?” (nature.com/top100, 2014). Now it’s time to start spreading the word around your findings and analysis. Publishing a high quality paper in scientific journals is only halfway towards receiving citation in the future. The rest of the journey is dependent on disseminating the publications via using the proper “Research Tools”. Proper utilization of the tools allows the researchers to increase the research impact and citations for their publications. This workshop will provide you various techniques on how you can increase the visibility and hence the impact of your research work.

Keywords: H-index, Improve citations, Research tools, Bibliometrics
Welcome to the DUT Institutional Repository
ISSN: 2310-7804

- Researchers are required to complete the Institutional Repository Application Form to facilitate the archivial of their article in this repository.
- @Mire's statistics module is now installed. Click on 'Show Statistical Information' below or when viewing an item, collection or community.
- Effective Strategies for Increasing Citation Frequency | Ale Ebrahim | International Education Studies via Hilton Gibson
- Some publishers do not permit the archiving of your article in institutional repositories if they have published it:
  - http://www.sherpa.ac.uk/romeo/PDFandIR.html
  - http://rchive.it/

http://rchive.it/
Effective Strategies for Increasing Citation Frequency

**Journal Reputation and Impact:** publishing a paper in a journal based on disciplinary reputation or with a high impact factor is the most well known way of getting your paper cited. But there are many other things a scholar can do to promote his or her work and make it easy for others to find.

**Utilize Open Access Tools:** Open Access journals tend to be cited more than non open access. Deposit your paper in a repository such as Scholars Archive here on campus or a disciplinary repository. Share your detailed research data in a repository.

**Standardize Identifying Info:** try to use the same name throughout your career as well as the name of your affiliated institution. Using common "official" names will allow for consistency and easy retrieval of your work by author or affiliation.

**Bring Colleagues on Board:** team-authored articles are cited more frequently, as does publishing with international authors. Working cross-or inter-disciplinarily helps as well.

**Beef Up That Paper:** use more references, publish a longer paper. Also papers which are published elsewhere after having been rejected are cited more frequently.

**Beyond Peer-Reviewed Original Research:** Write a review paper. Present a working paper. Write and disseminate web-based tutorials on your topic.

**Search Optimization:** use keywords in the abstract and assign them to the manuscript. Use descriptive titles that utilize the obvious terms searchers would use to look for your topic, avoiding questions in the title. Select a journal that is indexed in the key library databases for your field.

**Market Yourself:** create a key phrase that describes your research career and use it. Update your professional web page and publication lists frequently. Link to your latest and greatest article in your professional email signature file.

**Utilize Social Media:** Use author profiles such as ResearcherID and ORCID. Contribute to Wikipedia, start a blog and/or podcast, join academic social media sites.

Why should I care about my online presence?

- To increase the visibility & accessibility of published paper
- To increase the chance of getting publications cited
- To make your research and teaching activities known
- To disseminate the publications by using “Research Tools” effectively
- To increase publications chances of being found, read and cited
- To increase the chance of research collaboration
- To trace the citation
- To serve society better

©2014-2015 Nader Ale Ebrahim
Benefits of assessing and improving your online presence

- Being aware of your current online visibility gives you some control.
  - You will gain a sense of what your digital shadow looks like, that is, content about you posted and uploaded by others, or even created by you inadvertently.
  - You will make informed decisions about your digital footprint, what you want your active contribution to and interaction with the online world to look like.

- Increasing your own visibility enables you to:
  - Gain recognition in your field and beyond
  - Communicate your research to a wider audience
  - Grow your networks

- Increasing the visibility of your scholarly outputs will:
  - Increase the impact of your work and potentially increase citations
  - Make your work available to the widest audience

©2014-2015 Nader Ale Ebrahim
Objectives

• To increase a paper visibility, accessibility,
• To improve the quality of the article title and keywords
• To search and analyze the right journal to submit.
• To disseminate the publications by using “Research Tools” in order to increase citation
• To trace the citation
Outline

• Motivation
• Definition of h-index and g-index, Importance of h-index,
• How to use “Research Tools”,
• Paper title preparation, Selecting keywords,
• Target suitable journal
• Published Articles - Marketing,
• Online CV., Select the best paper repository
• Networking, Document Publishing, and finally
• Trace published article citation.
Motivations

- **Times Higher Education World University Ranking system** Citations — research influence (worth 32.5 per cent)

- **Professor Dr. Rajkumar Buyya** (Ph.D. in Computer Science and Software Engineering, Monash University, Melbourne, Australia, 2002)

- **H-index comparisons, Example**

- **Directory of Open Access Repositories**

- **H-Index Trends**
The top 100 papers

Nature explores the most-cited research of all time.

By Richard Van Noorden, Brendan Maher and Regina Nuzzo
Why citation is important?

- **In the Times Higher Education World University Rankings system** [Citations — research influence (worth 32.5 per cent)](http://www.timeshighereducation.co.uk/world-university-rankings/2010-2011/analysis-methodology.html).
  - Citations are widely recognised as a strong indicator of the significance and relevance — that is, the impact — of a piece of research.
  - However, citation data must be used with care as citation rates can vary between subjects and time periods.
  - For example, papers in the life sciences tend to be cited more frequently than those published in the social sciences.
  - The rankings this year use normalised citation impact, where the citations to each paper are compared with the average number of citations received by all papers published in the same field and year. So a paper with a relative citation impact of 2.0 is cited twice as frequently as the average for similar papers.
  - The data were extracted from the Thomson Reuters resource known as Web of Science, the largest and most comprehensive database of research citations available.
  - Its authoritative and multidisciplinary content covers more than 11,600 of the highest-impact journals worldwide. The benchmarking exercise is carried out on an exact level across 251 subject areas for each year in the period 2004 to 2008.
  - For institutions that produce few papers, the relative citation impact may be significantly influenced by one or two highly cited papers and therefore it does not accurately reflect their typical performance. However, institutions publishing fewer than 50 papers a year have been excluded from the rankings.
  - There are occasions where a groundbreaking academic paper is so influential as to drive the citation counts to extreme levels — receiving thousands of citations. An institution that contributes to one of these papers will receive a significant and noticeable boost to its citation impact, and this reflects such institutions’ contribution to globally significant research projects.

- **Source:** [http://www.timeshighereducation.co.uk/world-university-rankings/2010-2011/analysis-methodology.html](http://www.timeshighereducation.co.uk/world-university-rankings/2010-2011/analysis-methodology.html)
The methodology for the 2014-2015 World University Rankings is identical to that used since 2011-2012, offering a year-on-year comparison based on true performance rather than methodological change.

**Our 13 performance indicators are grouped into five areas:**

- Teaching: the learning environment (worth 30 per cent of the overall ranking score)
- Research: volume, income and reputation (worth 30 per cent)
- Citations: research influence (worth 30 per cent)
- Industry income: innovation (worth 2.5 per cent)
- International outlook: staff, students and research (worth 7.5 per cent).

**Exclusions**

Universities are excluded from the *Times Higher Education* World University Rankings if they do not teach undergraduates; if they teach only a single narrow subject; or if their research output amounted to fewer than 1,000 articles between 2008 and 2012 (200 a year).

In some exceptional cases, institutions that are below the 200-paper threshold are included if they have a particular focus on disciplines with generally low publication volumes, such as engineering or the arts and humanities. Further exceptions to the threshold are made for the six specialist subject tables.

The University of Melbourne, Australia
Email: raj@csse.unimelb.edu.au
First version: Nov. 2006

It is important to note that there is no substitute for quality work. Please do carry out path-breaking research and produce outstanding results by demonstrating their usefulness both theoretically and experimentally. It is equally important to enhance its impact by making the outcomes of your research work easily accessible to your peers and the larger community. Your efforts and willingness to genuinely share research outcomes with the community will lead to better citations to your work. This in turn leads to other outcomes and recognitions such as increased chances of (a) receiving invitations to present seminars and possibly keynote talks at conferences; (b) getting surprise emails from prospective employers; (c) obtaining industrial consulting opportunities; (d) gaining media attention; (e) winning grants, (f) attracting brilliant students, (g) receiving promotions, and so on and so forth. If all goes well, you might one day become a celebrity intellectual!

Enhancing the Visibility and Impact of Your Research

This workshop will cover various strategies for participants to consider as they undertake research activities.

The strategies are divided into three categories:

1. Preparing for Publication
2. Dissemination
3. Tracking Your Research

After attending this workshop, participants will be able to better understand tools and approaches that can be used to enhance author profiles, promote discoverability and access of research findings, and document evidence of research impact.

Upcoming Sessions

- Wed, March 26, 2014 - 12:00 PM - Register Now
Increase the Visibility of Your Research

Methods for increasing visibility vary by discipline.

Suggested strategies:

1. Include publications in an open repository so google will track when you've been cited:
   - an Institutional Repository - such as the Digital Repository at the University of Maryland (DRUM) - and provide full-text of it (if publisher allows).
   - a Subject Repository - such as AgEcon Search, arXiv.org, RePEc, SSRN, etc.
2. Publish in an Open Access journal or self-archive it (if publisher allows).
3. Publish/share data associated with your research - for more information see
   - Data & Text Repositories guide (Iowa State University)
   - Sharing Detailed Research Data is Associated with Increased Citation Rates (PLOS ONE)
   - Contact Research Data Services
4. Publish in an online journal with search features allowing users to find articles that cite it. For example, see “cited by” features in Highwire Press journal articles.
5. Share publications using social networking tools such as Mendeley, ResearchGate, CiteULike, getCITED, twitter, SlideShare, blogs, etc.
6. Create an online presence utilizing tools such as ORCID ID, Researcher ID, Google Scholar.
Increasing your citation rates

There are a number of ways that you can improve your citation rates as a researcher, here are some suggestions, based on this literature review on improving citation counts, conducted in March 2014:

- **Make research outputs open access where possible**
  Evidence shows that open access articles are cited significantly more than non-open access articles.

- **Where funding permits publish using the gold open access route where possible**
  Publishing via the Gold open access route can result in research being made open access immediately for other researchers to read and cite.

- **Share your research data where possible**
  Evidence suggests that clinical trials which shared their data were more frequently cited than trials that did not. Sharing research data can make research more accessible and visible.

- **Use a consistent author name**
  Evidence shows that using a consistent author name throughout a research career can help to enhance retrieval of a researcher’s output. Changing names throughout a career can make it difficult to associate research output
HOW TO MAXIMISE THE VISIBILITY AND IMPACT OF YOUR RESEARCH: PATHWAYS TO OPEN ACCESS

This workshop is aimed at all researchers who have started writing for publication or are considering writing for publication. A great amount of researchers’ time and effort involves writing up their research for publication. However, once a paper is accepted for publication, it is not guaranteed that it will reach the widest possible audience, even if the journal does have a high impact factor.
Talk: Citation Matters! Realise Your Paper's Full Citation Potential: 8 April 10

Published on: 05-Apr-2010
01-Apr-2010 - 30-Apr-2010 0000hrs - 2330hrs

VENUE: LT 19 (N2-B2)

Tel: 6592 7543
email: library@ntu.edu.sg

Title: Citation Matters! Realise Your Paper's Full Citation Potential
Date: 8th April 2010, Thursday
Time: 11.00am - 12.30pm
Venue: LT 19 (N2-B2)
Speaker: Christina Low, Managing Editor, Taylor & Francis Asia Pacific
Q & A: Christina Low and Prof Eddie Kuo, Editor-in-Chief, Asian Journal of Communication

To register, visit www3.ntu.edu.sg/lib/publishing.

Researchers not only actively publish nowadays. They also have to track the impact of their research through citations and the ranking of the journals they are published in. Going beyond getting published, understanding citation metrics and journal impact will certainly help researchers succeed in today's competitive fields.

Increase Your Impact – How to make your research more visible and have more impact through placing your papers in Open Access and optimizing your pages in The HKU Scholars Hub?

By Professor John Bacon-Shone
Associate Director, Knowledge Exchange Office &
Mr David Palmer
A scientist has index \( h \) if \( h \) of [his/her] \( N_p \) papers have at least \( h \) citations each, and the other \( (N_p - h) \) papers have no more than \( h \) citations each.
A scientist has index h if h of his/her Np papers have at least h citations each, and the other (Np-h) papers have no more than h citations each.

As an example, a researcher with an H-index of 15 has (of their total number of publications) 15 papers which have been cited at least 15 times each.

Neither researcher can have an H-index of more than 6.

g-index (Leo Egghe (2006))

- In order to give more weight to highly-cited articles Leo Egghe (2006) proposed the g-index. The g-index is defined as follows:

  [Given a set of articles] ranked in decreasing order of the number of citations that they received, the g-index is the (unique) largest number such that the top $g$ articles received (together) at least $g^2$ citations. Although the g-index has not yet attracted much attention or empirical verification, it would seem to be a very useful complement to the h-index.

Refreshing honesty? Journal asks authors to help game its impact factor

We and others have documented plenty of cases where papers get retracted because authors manipulate citations to boost their impact factor.

Sometimes, journal publishers pressure authors to cite papers within the journal to artificially inflate its impact factor. Since this is highly discouraged - COPE has extensive commentary on the problem – it usually happens behind closed doors.

Since we’re all about transparency, we were delighted to discover that the Thammasat International Journal of Science and Technology, a publication out of Thammasat University in Thailand, lists the policy up front:

“Please kindly give some citations related to your written article from any articles published in TIJSAT in order that the TIJSAT’s impact factor can be raised to a higher level.

Here’s a screenshot, in case the journal gets cold feet (click for larger version).

Citation manipulation: Journal retracts paper because author boosted references to a journal he edits

A group of researchers have lost a paper in a computer science journal because they were apparently using its references to help the impact factor of a different journal that one of them edits.

Here’s the notice for “Impacts of sensor node distributions on coverage in sensor networks,” a paper first published in 2011 and cited four times, according to Thomson Scientific’s Web of Knowledge: Read the rest of this entry »

New perspectives of impact

ACADEMIC IMPACT

- Journal Impact Factor
- Citation counts
- Traditional metrics

SOCIETAL IMPACT

- Download counts
- Page views
- Mentions in news reports
- Mentions in social media
- Mentions in blogs
- Reference manager readers
- ... etc.
- Alternative metrics “altmetrics”

The University of Pittsburgh has embedded PlumX widgets in their D-Scholarship institutional repository. You can see metrics across their institution at Plu.mX/Pitt. They have also built profiles for researchers across a variety of disciplines. Some sample profiles:

Peter Brusilovsky
Rebecca Crowley
Michael Pinsky
A Comparison between Two Main Academic Literature Collections: Web of Science and Scopus Databases

The Altmetric score is one measure of the quality and quantity of online attention that this article has received. You can read about how Altmetric scores are calculated here.

This article scored 3.75

The context below was calculated when this article was last mentioned on 13th May 2013.

Compared to all articles in Asian Social Science

So far Altmetric has tracked 29 articles from this journal. They typically receive a little less attention than average, with a mean score of 1.0 vs the global average of 4.2. This article scored the same or higher as 28 of them. It's actually the highest scoring article in this journal that we've seen so far.

All articles of a similar age

Older articles will score higher simply because they've had more time to accumulate mentions. To account for age we can compare this score to the 73,148 tracked articles that were published within six weeks on either side of this one in any journal. This article has done well, scoring higher than 78% of its contemporaries.

All articles

More generally, Altmetric has tracked 1,645,693 articles across all journals so far. Compared to these this article has done well and is in the 79th percentile. It's in the top 25% of all articles ever tracked by Altmetric.
Genome Engineering of *Drosophila* with the CRISPR RNA-Guided Cas9 Nuclease

Scott J. Gratza, Alexander M. Cummingsb, Jennifer N. Nguyenc, Danielle C. Hammd, Laura K. Donohuee, Melissa M. Harrisonf,*,†, Jill Wildongere, and Kate M. O’Connor-Gilesf,†

**Abstract**

We have adapted a bacterial CRISPR RNA/Cas9 system to precisely engineer the *Drosophila* genome and report that Cas9-mediated genomic modifications are efficiently transmitted through the germline. This RNA-guided Cas9 system can be rapidly programmed to generate targeted alleles for probing gene function in *Drosophila*.

Deep impact: unintended consequences of journal rank

Björn Brembs¹, Katherine Button² and Marcus Munafò³

¹ Institute of Zoology–Neurogenetics, University of Regensburg, Regensburg, Germany
² School of Social and Community Medicine, University of Bristol, Bristol, UK
³ UK Centre for Tobacco Control Studies and School of Experimental Psychology, University of Bristol, Bristol, UK

Most researchers acknowledge an intrinsic hierarchy in the scholarly journals (“journal rank”) that they submit their work to, and adjust not only their submission but also their reading strategies accordingly. On the other hand, much has been written about the negative effects of institutionalizing journal rank as an impact measure. So far, contributions to the debate concerning the limitations of journal rank as a scientific impact assessment tool have either lacked data, or relied on only a few studies. In this review, we present the most recent and pertinent data on the consequences of our current scholarly communication system with...

Teaching Elementary Students Who Speak Black English Vernacular to Write in Standard English: Effects of Dialect Transformation Practice

Abstract

Although nonstandard dialects of English are legitimate forms of spoken language used by many Americans, students in U.S. schools must acquire writing competence using Standard English (SE). Participants in this study were 3rd- and 4th-grade African-American students who exhibited Black English Vernacular (BEV) features in their written work. Six syntactic features differing in BEV and SE were targeted. Students received one of three treatments to increase their use of the SE features in their writing: (1) exposure to SE features in stories; (2) story exposure plus explanation of SE rules; and (3) story exposure, SE rule instruction, and guided practice transforming sentences from BEV to SE features. The third treatment proved most effective in enabling students to translate BEV sentences into SE forms and to employ the targeted SE features in their free writing. Results indicate that having students practice translating constant target sentences that boosts their own writing and receiving corrective feedback are

Research Tools Mind Map

By: Nader Ale Ebrahim
Authors cite a work because:

– It is relevant (in some way) to what they’re writing
– They know it exists

Improving access and retrieval of your research study is the surest way to enhance its impact. Repetition, consistency, and an awareness of the intended audience form the basis of most the following strategies.

Preparing for Publication
Dissemination
Keeping Track of Your Research

Source: Washington University School of Medicine, St. Louis Missouri

©2014-2015 Nader Ale Ebrahim
Preparing for Publication – Writing

• Use a unique name consistently throughout academic careers;
• Use a standardized institutional affiliation and address;
• Repeat key phrases in the abstract while writing naturally;
• Assign keyword terms to the manuscript;
• Use more references;
• Write a longer paper;
• Write a review paper;
• Present a working paper;

©2014-2015 Nader Ale Ebrahim
Preparing for Publication – Collaboration & Journal Selection

- Publish with international authors;
- Publish papers with a Nobel laureates;
- Publish your article in one of the journals everyone in your discipline reads;
- Open Access (OA) has a positive impact on growth of citations;
- Publish your work in a journal with the highest number of indexing.

©2014-2015 Nader Ale Ebrahim
The preferred form of an author's name is first name and last name; this form reduces the likelihood of mistaken identity. **Use the same name for publication throughout your career**; that is, do not use initials on one manuscript and your full name on another one. Determining whether *Juanita A. Smith* is the same person as *J. A. Smith*, *J. Smith*, or *A. Smith* can be difficult, particularly when citations span several years.
News

To be the best, cite the best

Citation analysis picks out new truth in Newton's aphorism that science 'stands on the shoulders of giants'.

The mass of medium-level research is less important for inspiring influential breakthroughs than the most highly-cited papers, a citation study argues.

Strategies for Enhancing the Impact of Research

Preparing for Publication

• Add the name of study in the title of all publications and use the same title/name consistently.
• Assign keyword terms to the manuscript.
• Formulate a concise, well-constructed title and abstract. Include crucial keywords in the abstract.
• Publish your work in an open access journal.
• Consider the desired audience when choosing a journal for publication.

How to... ensure your article is highly downloaded: what you can do PRIOR to submission

As an author, you can dramatically improve the chances of your article being downloaded once it’s online, before you even submit it!

There are three easy steps you can take to ensure it enjoys high usage:

Choose a descriptive title
Use appropriate keywords
Write an informative abstract

Source: http://www.emeraldinsight.com/authors/guides/promote/optimize1.htm
Selecting keywords
Consider where you would like to appear – in other words, what is your niche?

If someone searched for a topic, where would you like to appear?
Improving Readership of Your Articles

Appearing at the top of the list of search results, and having a useful description of your work, greatly improve the likelihood that a reader will find and download your document.

• Abstracts should include **keywords** that potential readers are likely to use in searches. It is especially valuable to modify and reuse words that appear in the document's title and full text to improve the article's rank when readers search for those words.

• The **first sentence of the abstract** is all that is likely to be displayed in the search page results, so make your first sentence one that will encourage readers to click the link.
Keywords

Selecting keywords lead to get more citation.
Hi there! This issue, we are going to explain how KeyWords Plus broadens your search. KeyWords Plus is the result of our Thomson Reuters editorial expertise in Science.

What our editors do is to review the titles of all references and highlight additional relevant but overlooked keywords that were not listed by the author or publisher. With KeyWords Plus, you can now uncover more papers that may not have appeared in your search due to changes in scientific keywords over time.

Thanks and keep your feedback and questions coming!

Smiles,

Lim Khee Hiang

Optimize Title/Abstract

Step 1: Construct a clear, descriptive title
In search engine terms, the title of your article is the most interesting element. The search engine assumes that the title contains all of the important words that define the topic of the piece and thus weights words appearing there most heavily.

Step 2: Reiterate key phrases
The next most important field is the text of the abstract itself. You should reiterate the key words or phrases from the title within the abstract itself.

**False Remembering in the Aged**

Researchers studying human memory have increasingly focused on memory accuracy in aging populations. In this article we briefly review the literature on memory accuracy in healthy older adults. The prevailing evidence indicates that, compared to younger adults, older adults exhibit both diminished memory accuracy and greater susceptibility to misinformation. In addition, older adults demonstrate high levels of confidence in their false memories. We suggest an explanatory framework for the high level of false memories observed in older adults, a framework based on the theory that consciously controlled uses of memory decline with age, making older adults more susceptible to false memories that rely on automatic processes. We also point to future research that may remedy such deficits in accuracy.

*This article appears on the first page of results in Google for false+memory+aged.*

Compare Keywords “Senior Population” with “Aged”
Compare Keywords “Senior Population” with “Aged”
Target Suitable Journal
Strategies to increase citations

• Target a journal with a high impact factor, or, in fact, with any impact factor at all!

• Choose a new, rapidly growing field of research. Articles on hot topics tend to cite much more recent references than those in more traditional fields.

• Target journals in rapidly growing research fields because they tend to publish papers with a short time interval from submission to acceptance.

• Write research articles, technical notes and reviews. For the purposes of calculating citations, these are considered “citable” items. Editorials, letters, news items and meeting abstracts are “non-citable items”.

• Write reviews in addition to research papers. Reviews are more likely to be cited than original research papers.

• Write at length. Longer articles are cited more often.
Strategies to increase citations

• Make it easy for others to access your work. Online availability of articles clearly increases citations (and therefore, the journal’s impact factor). It helps if researchers can find relevant articles and access them instantly, rather than working their way through barriers of passwords and technicalities. This effect will increase with the availability of search engines like Google Scholar.
  – Target “open access” journals (especially if they have an impact factor).
  – Make your work available via the Google searches/ResearcherID.
  – Put the address for your ResearcherID page into your email signature as a clickable link.

• Don’t write as a member of a consortium. It’s better to be one in a list of individual authors. Some evidence shows citations to articles written by consortia have been undercounted.

• Find quick publication Journals
One key request of researchers across the world is unrestricted access to research publications. Open access gives a worldwide audience larger than that of any subscription-based journal and thus increases the visibility and impact of published works. It also enhances indexing, retrieval power and eliminates the need for permissions to reproduce and distribute content.

Where should I submit my publication?

If you want your article to …

• Publish in most influential or highly cited journal
  → Use Impact Factor or
  → 5 Year Impact Factor (for subjects need longer citation period, e.g. GEOLOGY or MANAGEMENT or SOCIOLOGY, etc)

• To reach out to readers and be read immediately
  → Use Immediacy Index

• Stay active in journal collection
  → Use Cited Half Life

Note: The above only serves as general guidelines, deeper understanding of JCR, the subjects and dynamic publication cycles are crucial when deciding where to publish your paper.
“Self-citation refers to a paper being submitted to a specific journal in which papers that have been published during the previous 2 years in that same journal are cited in the reference list. While self-citation of relevant papers is legitimate, excessive self-citation can indicate a manipulation.

Thomson Reuters resource known as Web of Science, the company which now lists journal impact factors, considers self-citation to be acceptable up to a rate of 20%, anything over that is considered suspect” (Diana Epstein, 2007).

Self-citation rates across groups of disciplines

Source: Centre for Science and Technology Studies, 2007.

There are inherent differences between different fields with regards to citation behavior. For some fields such as Mathematics or Economics it takes longer to reach the peak of citation activity.

8 Ways to increase usage and citation of published papers

1. Create your own website
2. Create Mind Map
3. Do Search Engine Optimization (SEO)
5. Join Twitter
6. Join academic social networking sites
7. Join LinkedIn
8. Deposit papers in repositories

Adopted from “10 Ways to Increase Usage and Citation of your Published Article Using Social Media” ©2014-2015 Nader Ale Ebrahim
Citation Competition

- Always upload preprints of your papers either on the Los Alamos ArXiv or NEC Citeseer or both. This gives your papers visibility.
- When writing a paper, use the introduction to provide a motivating context. So it grabs the interest of the reader.
- When writing a paper the goal is for you to communicate ideas in the clearest way. The more people that can understand your paper, the more it will be cited.
- Keep track of all your international contacts by using the LinkedIn web utility.
• Take 50 photocopies of your best 1-2 papers to conferences, and leave them on the brochure desk as a handout.

• Maintain your publication list on your home page. Make an attractive homepage that is clear about what you are working on.

• Conference papers do not get ISI citation counts. So the trick is to ensure that after a conference you take that paper, correct it, extend it, and submit it to a journal.

• When your paper is finally published, individually email the pdf to selected collaborators and contacts that you have met at conferences etc.

• Source: Derek - https://www.eleceng.adelaide.edu.au/personal/dabbott/wiki/index.php/Citation_Competition
Why online CV.?

Increased access to publications leads to higher visibility and thus increased impact.

1. Introduction

The underlying ideas for modularity and commonality are not really new. As early as 1914, an automotive engineer demanded the standardization of automobile subassemblies, such as axles, wheels, and fuel feeding...

ABSTRACT
This article introduces and discusses the concept of academic search engine optimization (ASEO). Based on three recently conducted studies, guidelines are provided on how to optimize scholarly literature for academic search engines in general and for Google Scholar in particular. In addition, we briefly discuss the risk of researchers' illegitimately 'over-optimizing' their articles.

2. RELATED WORK
On the Web, search engine optimization (SEO) for Web sites is a common procedure. SEO involves creating or modifying a Web site in a way that makes it "easier for search engines to both crawl and index its content" [4]. There exists a huge community that discusses the latest trends in SEO and provides advice for Webmasters in forums, blogs, and newsgroups." Even research articles and books exist on the subject of SEO [5-10]. When SEO
Open Access and Scopus: A New Approach to Scientific Visibility From the Standpoint of Access

The last few years have seen the emergence of several open access (OA) options in scholarly communication, which can be grouped broadly into two areas referred to as gold and green roads. Several recent studies have shown how large the extent of OA is, but there have been few studies showing impact of OA in the visibility of journals covering all scientific fields and geographical regions. This research presents a series of informative analyses providing a broad overview of the degree of proliferation of OA journals in a data sample of about 17,000 active journals indexed in Scopus. The study shows a new approach to scientific visibility from a systematic combination of four databases: Scopus, the

Introduction

The scientific community is a key platform for research activity, and publishing is the formal mechanism through which researchers make contributions to the body of scientific knowledge. Thus, the documents configuring the bibliographic dimension of a discipline also can be seen as systems of production and divulgation of knowledge (Kecskes, 1982). Journals and databases are the protagonists in scientific communication. Their value and implications for science go beyond purely bibliographic relevance, as they become the structures of interaction and interaction.

Why should you share links to your published work online?

According to Dr Melissa Terras from the University College London Centre for Digital Humanities, “If you tell people about your research, they look at it. Your research will get looked at more than papers which are not promoted via social media” (2012).
The Kardashian index: a measure of discrepant social media profile for scientists

\[ F = 43.3C^{0.32}(1) \]

Where \( F \) is the number of twitter followers and \( C \) is the number of citations.

As a typical number of followers can now be calculated using this formula, Hall (2014) proposed that the Kardashian Index (K-index) can be calculated as follows:

\[ K\text{-index} = \frac{F(a)}{F(c)} \]

Where \( F(a) \) is the actual number of twitter followers of researcher X and \( F(c) \) is the number researcher X should have given their citations. Hence a high K-index is a warning to the community that researcher X may have built their public profile on shaky foundations, while a very low K-index suggests that a scientist is being undervalued. Here, Hall (2014) proposed that those people whose K-index is greater than 5 can be considered ‘Science Kardashians’

Academic blogging is part of a complex online academic attention economy. Just like a taller, more powerful radio tower will boost a signal so it can be heard at a greater distance; it makes sense that more people will read a paper if the writer is active on social media. Of course, because we wrote it, we think it’s great that our paper has proved so popular, but we have to ask: in the future, will the highest quality papers be read most? Or will it be only those papers backed up by the loudest voices?

New Article Acceptance: Multiagent Systems as a Team Member

I have received notice that my article titled *Multiagent Systems as a Team Member* will be published by Common Ground Publishing in their journal: *The International Journal of Technology, Knowledge, and Society*. The web page for the journal follows: [http://ijt.cgpublisher.com](http://ijt.cgpublisher.com)

No date as to when the article will be published but it should be this fall. Listed below is the abstract for the journal article to give those interested an indication of what the article is about.

**Abstract**

With the increasing complex business environment that organizations have to operate in today, teams are being utilized to complete complex tasks. Teams
Document Publishing
Open everything

• It’s not only journal articles you can share. Consider making all your scholarly outputs available online.

How to Increase Citations of Your Scientific Articles

Not only non-technical articles lead people to your technical papers, but they will generally raise your scientific profile on the internet.

Virtual Communities and Mobile Devices

Tom Stewart, Executive Chairman of System Concepts, is founding editor of the research journal Behaviour and Information Technology which was established 30 years ago this year. Technology has changed dramatically in that time but understanding how to design interfaces which are effective, efficient and satisfying for users is still a challenge.

There are two themes in this issue of Behaviour and Information Technology - Vol 30 Issue 5 – virtual communities and mobile devices. In this editorial, Tom explores some of the benefits and pitfalls when both themes come together.
Figshare - A self-publishing service

Figshare is a repository where users can make all of their research outputs available in a citable, shareable and discoverable manner. This service allows users to upload any file format to be made visualisable in the browser so that figures, datasets, media, papers, posters, presentations and filesets can be disseminated in a way that the current scholarly publishing model does not allow.

The Internet Archive is a non-profit that was founded to build an Internet library. Its purposes include offering permanent access for researchers, historians, scholars, people with disabilities, and the general public to historical collections that exist in digital format. Founded in 1996. Now the Internet Archive includes texts, audio, moving images, and software as well as archived web pages in our collections, and provides specialized services for adaptive reading and information access for the blind and other persons with disabilities. (Example)

Trace published article citation
The importance of citation tracking

The standard tool used in citation tracking is a citation index. Citation indexes allow you to search the academic literature in ways that show the progress of academic debate in your field. With a citation index, you can easily identify the most influential articles, and the leading academics in your field. You can track backwards (using lists of cited articles) and forwards (using lists of articles which cite a particular article). This means that you can determine the position of academic debate at any time in the past.

Keeping up-to-date

What is an alert service?

- Many journal databases and book publishers offer free alert services. These are an effective means of keeping track of the latest research.

- Alert services come in different forms. The most common include:
  - a search alert. This is a saved search which alerts you when a book or article that matches your search terms is published.
  - a TOC (Table of Contents) alert. Such an alert notifies you when a new issue of a journal is published, and provides you with the issue's table of contents.
  - a citation alert. This advises you when a new article cites a particular work.
  - Most alert services are email-based. An increasing number are now offered as an RSS feed. If you are just beginning, you might like to try email alerts first. These are generally easier to create.
It is not vanity but a necessity to set up Google alerts (http://www.google.com/alerts) so you can automatically keep an eye on your developing presence and follow your online footprint and shadow.

Keeping up-to-date
