DEMATEL

Abstract
Ru-Jen Lin, [2013. Using fuzzy DEMATEL to evaluate the green supply chain management practices 40, 32 –39] proposed a fuzzy decision making trial and evaluation laboratory method to determine the causal relationships among eight criteria of three main green supply chain management practices, namely practices, performances and external pressures. Here, a few corrections to this paper are made.

The subtraction and division of two triangular fuzzy numbers in equation (4) in page 35 of the paper must be read as follows, with reference to page 335 of Wang et al. (2006), page 650 of Chang (1996) and 139 of Lee (2005):

\[ \tilde{A}(-) \tilde{B} = (a_1, a_2, a_3)(-)(b_1, b_2, b_3) = (a_1 - b_3, a_2 - b_2, a_3 - b_1) \]

\[ \tilde{A}(+) \tilde{B} = (a_1, a_2, a_3)(+)(b_1, b_2, b_3) = (a_1/b_3, a_2/b_2, a_3/b_1) \]
