Digital Intraoral Sensors And Consumables Market Will Perceive Durable Enlargement

Persistence Market Research (PMR) delivers the key insights on the global digital intraoral sensors and consumables market in its upcoming report titled “Digital Intraoral Sensors and Consumables Market: Global Industry Analysis 2013–2017 and Forecast 2018–2026”. In terms of revenue, the global digital intraoral sensors and consumables market is expected to grow at a promising CAGR of 5.0% over the next decade.

North America is anticipated to contribute a major share in terms of revenue in the global digital intraoral sensors and consumables market over the forecast period. With an expected value share of around 40.0% in 2017, the North America digital intraoral sensors and consumables market is projected to reach US$ 416.9 Mn by the end of 2026.

Digital Intraoral Sensors and Consumables Market: Segmental Analysis

The global digital intraoral sensors and consumables market is segmented based on product type, end users, and regions. Based on product type, the digital intraoral sensors and consumables market is segmented into dental digital intraoral sensors and consumables.

Dental digital intraoral sensors are expected to hold a significant share of more than 43.0% in the global digital intraoral sensors and consumables market due to growing adoption of devices amongst physicians. Intraoral sensors reduce the patient radiation dose.

The intraoral sensors are a more cost-effective alternative when compared with traditional dental x-ray systems and thus are expected to contribute to the large share in the global digital intraoral sensors and consumables market over the forecast period.

Based on the end user, the global digital intraoral sensors and consumables market is segmented into dental laboratories, dental hospitals, dental clinics, and others. Among all the end users, the dental clinics are expected to be the leading segment in the global digital intraoral sensors and consumables market over the forecast period.

Digital Intraoral Sensors and Consumables Market: Dynamics Impacting Growth

Technological advancements and innovations have brought about major changes in the healthcare industry in the last two decades. This had a tremendous influence in all the branches of dentistry. With the advancements, the necessity for more precise diagnostic tools especially imaging methods have become mandatory.

This has provided enormous growth opportunities for the global digital intraoral sensors and consumables market over the forecast period. The shift from traditional intra-oral X-rays towards advanced and digital imaging techniques such as digital intraoral sensors has contributed towards the growth of the global market.

Rising number of periodontal disease and tooth decay are leading to an increasing use of digital intraoral sensors and consumable devices across the globe. Digital imaging equipment is the current key advanced product in the medical devices industry as it has shown promising results with the complications associated with X-ray exposure.

Thus, the growing incidence of oral problems with an increasing number of dental procedures is anticipated to drive the growth of the global digital intraoral sensors and consumables market over the forecast period.
Mergers, collaborations, partnerships, and acquisitions among manufacturers for research and development is expected to boost the growth of the digital intraoral sensors and consumables market over the forecast period.

However, the cost of dental care is continuously on its rise over the last few decades and continues to rise at a rate of 5% annually. Technological changes have also expanded the scope of possibly improved treatment and diagnostics. This has majorly resulted in an upsurge in the cost of medical services reflecting in the high cost of medical devices.

The future evolution of technology and its impact on costs is uncertain. Moreover, new technologies may be developed in order to treat currently untreatable disorders, thus increasing the cost. Thus, rising cost of medical services and limited capacity and resources for primary health care facilities are major factors, which are expected to restrain the growth of the global digital intraoral sensors and consumables market over the forecast period.

Digital Intraoral Sensors and Consumables Market: Competition Structure

Company Profiles

- Carestream Dental, LLC
- Danaher Corporation
- Dentsply Sirona
- FONA Dental
- Suni Medical Imaging, Inc.
- DÜRR DENTAL SE
- Midmark Corporation
- Acteon Group
- Ray Medical
- Others.
