The Importance of the Business Judgment Rule

Bernard S Sharfman
THE IMPORTANCE OF THE BUSINESS JUDGMENT RULE

Bernard S. Sharfman*

ABSTRACT

Anyone who has had the opportunity to teach corporate law understands how difficult it is to provide a compelling explanation of why the business judgment rule (Rule) is so important. To provide a better explanation of why this is so, this Article takes the approach that the Aronson formulation of the Rule is not the proper starting place. Instead, this Article begins by starting with a close read of two cases that initiated the application of the Rule under Delaware law, the Chancery and Supreme Court opinions in Bodell v. General Gas & Elec. By taking this approach, the following insights into the Rule were discovered that may not have been so readily apparent if the starting point was Aronson:

First, without the Rule, the raw power of equity could conceivably require all challenged Board decisions to undergo an entire fairness review. The Rule is the tool used by a court to restrain itself from implementing such a review. This is the most important function of the Rule. Second, as a result of equity needing to be restrained, there is no room in the Rule formulation for fairness; fairness and fiduciary duties must be mutually exclusive. Third, there are three policy drivers that underlie the use of the Rule. Protecting the Board’s statutory authority to run the company without the fear of its members being held liable for honest mistakes of judgment; respect for the private ordering of corporate governance arrangements which almost always grants extensive authority to the Board to make decisions on behalf of the corporation; and the recognition by the courts that they are not business experts, making deference to Board authority a necessity. Fourth, the Rule is an abstention doctrine not just in terms of precluding duty of care claims, but also by requiring the courts to abstain from an entire fairness review if there is no evidence of a breach in fiduciary duties or taint surrounding a Board decision. Fifth, stockholder wealth maximization (SWM) is the legal obligation of the Board and the Rule serves to support that purpose. The requirement of SWM enters into corporate law through a Board’s fiduciary duties as applied under the Rule, not statutory law. In essence, SWM is an equitable concept.

* Bernard S. Sharfman is an associate fellow of the R Street Institute, a member of the Journal of Corporation Law’s editorial advisory board, and a former Visiting Assistant Professor of Law at Case Western Reserve University School of Law. Mr. Sharfman would like to thank George Mocsary for helping to get this paper started. Mr. Sharfman would also like to thank Myron Steele, former Chief Justice of the Delaware Supreme Court, and William Chandler III, former Chancellor of the Delaware Court of Chancery, for their positive feedback and helpful comments. Mr. Sharfman is dedicating this article to his wife, Susan Thea David, and his daughter, Amy David Sharfman.
INTRODUCTION

The business judgment rule (Rule), the most prominent and important standard of judicial review under corporate law, protects a decision of a corporate board of directors (Board) from a fairness review (“entire fairness” under Delaware law) unless a well pleaded complaint provides sufficient evidence that the Board has breached its fiduciary duties or that the decision making process is tainted, such as with a lack of independence or interestedness. ¹ Yet, anyone who has had the opportunity to teach corporate law understands how difficult it is to provide a compelling explanation of why the Rule is so important.² For want of a better simile, trying to explain its importance is like throwing darts at a dart board with the goal of filling up every spot on the board. One eventually gets tired and becomes satisfied with the spots that were hit, but understands that the center of the bull’s-eye has been missed.

To provide a better understanding of the Rule’s importance, this Article takes the approach that the Aronson formulation of the Rule³ is not the proper starting place for its explanation. The Aronson formulation is a common starting point because it includes an aspect of the duty of care, the need for a Board to make a decision “on an informed basis,”⁴ that was not found in prior formulations used by the Delaware Supreme Court. Yet, starting with the Aronson formulation is like staring in the middle of a story, with much to be lost in its understanding.

Instead of starting with the Aronson formulation, this Article takes the novel approach of explaining the Rule by starting with a close read of two cases that initiated the application of the Rule under Delaware General Corporation law (DGCL), the Chancery Court (court) and Delaware Supreme Court (Court) opinions in Bodell v. General Gas & Elec. (Bodell I and II).⁵ By taking this approach, the following insights into the Rule were discovered that may not have been so readily apparent if the starting point was the Aronson formulation.

First, without the Rule, the raw power of equity could conceivably require all challenged Board decisions to undergo an entire fairness review. In the face of this power, the issue for the courts is to determine how the

¹ Cede & Co. v. Technicolor, Inc., 634 A. 2d 345, 361 (Del 1993).
² One corporate law scholar, Lyman Johnson, even suggests that it is time to get rid of the Rule as a judicial standard of review. See Lyman P.Q. Johnson, Unsettledness in Delaware Corporate Law: Business Judgment Rule, Corporate Purpose, 38 DEL. J. CORP. L. 405, 423-431 (2013). Johnson would prefer that the courts focus simply on whether or not a fiduciary duty has been breached, with the BJR being reduced to a policy statement that directs the courts “not [to] weigh in on the substantive soundness of director decisions” when reviewing a corporate board decision for a breach in the board’s duty of care. Id.
³ See infra, Part II.
⁵ Bodell v. General Gas & Elec. Corp. (Bodell I), 132 A. 442 (Del. Ch. 1926), aff’d, Bodell v. General Gas & Elec. Corp. (Bodell II) 140 A. 264 (Del. 1927).
interests of stockholders are to be balanced against protecting the Board’s statutory authority to run the company without the fear of constantly facing potential liability for honest mistakes of judgment, the first policy driver underlying the Rule. This requires equity to be restrained in order to have balance with Board authority as provided by statutory law. The courts do this by applying the Rule as a tool to determine when a Board decision should stand without further review or when an entire fairness review is required and the full force of equity is to be applied. This is the most important function of the Rule.

Second, as a result of equity needing to be restrained, there is no room in the Rule formulation for fairness; fairness and fiduciary duties must be mutually exclusive. A fairness review is not allowed unless there is evidence that a fiduciary duty has been breached or taint surrounds the decision making process. If no breach or taint is found, then review is halted and the decision stands, upholding the Board’s statutory authority to manage the corporation. The result is that the Rule serves as a fulcrum balancing the lever upon which the managerial discretion of the board of directors, as provided by statutory corporate law, and equity, with its focus on fiduciary duties and the potential for a fairness standard of review, sit on opposite ends. The Rule and its formulation is the tool that ensures that equity and statutory corporate law co-exist. Removing the Rule as a standard of judicial review law could lead the court to ignore the implications of applying its equitable powers without restraint, potentially allowing the balance to move too far in the direction of equity and resulting in far too many decisions coming under a fairness review. In essence, the Rule is a self-imposed constraint on a court’s equitable powers.

Third, the role played by the Rule does not change under DGCL 141(a), (Bodell I and II dealt with Section 4a of the old DGCL, currently DGCL § 152) even though two additional policy drivers are identified that reinforces the use of the Rule versus an automatic fairness review. These policy drivers are 1) respect for the private ordering of corporate governance arrangements which almost always grants extensive authority to the Board to make decisions on behalf of the corporation and 2) the recognition by the courts that they are not business experts, making deference to Board authority a necessity.

Fourth, the Rule is an abstention doctrine not just in terms of precluding duty of care claims, as persuasively argued by Stephen Bainbridge, but also in a more fundamental way, by requiring the courts to abstain from an entire fairness review if there is no evidence of a breach in fiduciary duties or taint surrounding a Board decision.

Fifth, stockholder wealth maximization (SWM; an approach to corporate governance that encourages a Board to implement all major decisions with only the economic interests of stockholders in mind) is the
legal obligation of the Board and the Rule serves to support that purpose. This is not readily apparent from the Aronson formulation of the Rule. The requirement of SWM enters into corporate law through a Board’s fiduciary duties as applied under the Rule, not statutory law. In essence, SWM is an equitable concept. The implementation of SWM is indirect as all three of the major policy drivers that influence the Rule guide the courts to stay away from a direct focus on SWM unless the Rule has been rebutted.

The discussion that follows is specifically focused on those Board decisions that are allowed to be reviewed under the Rule. This means that the Article minimizes the discussion of those less common business decisions that come under corporate law’s intermediate standards of judicial review, the Revlon duty\(^8\) and the Unocal test;\(^9\) both of which are meant to protect decisions from an automatic fairness review even if applied with a heightened level of judicial scrutiny; or those Board decisions that must initially come under the entire fairness standard of review such as when the corporation enters into a self-dealing transaction with a controlling stockholder.\(^10\)

Also, the discussion that follows, when it references state corporate law, has been pragmatically framed in the context of Delaware corporate law. Delaware is the state where the majority of the largest United States companies are incorporated,\(^11\) and its corporate law often serves as the

---

\(^8\) Revlon, Inc. v. MacAndrews & Forbes Holdings, Inc., 506 A.2d 173, 182 (Del. 1986) (establishing the Revlon duty to maximize stockholder wealth when the break-up, sale, or merger of a company is inevitable); see also [QVC].

\(^9\) Unocal Corp. v. Mesa Petroleum Co., 493 A.2d 946, 946–59 (Del. 1946) (creating a two-pronged test, commonly referred to as the Unocal test, to review defensive measures taken by a board of directors to repel attempts by an outside investor or group of investors to gain control of the corporation).

\(^10\) Kahn v. M&F Worldwide Corp., 88 A.3d 635, 642 (Del. 2014) (According to the Delaware Supreme Court, “[w]here a transaction involving self-dealing by a controlling stockholder is challenged, the applicable standard of judicial review is ‘entire fairness,’ with the defendants having the burden of persuasion.”). However, the Rule may still apply in a transaction where the controlling stockholder offers to buy out the minority stockholders (freeze-out) if the Board appoints a special independent committee to negotiate the transaction on behalf of the minority stockholders and the transaction is approved by an informed majority of minority stockholders. Id. at 645. In addition to Kahn’s freeze-out merger scenario, it should also be noted that the courts have recently taken other action to increase the number of Board decisions that come under the Rule, and not under an entire fairness standard of review, as long as they are satisfied that a majority of informed stockholders have approved the decision. See Corwin v. KKR Financial Holdings LLC, 125 A. 3d 304 (Del. 2015).

\(^11\) See Lewis S. Black, Jr., Why Corporations Choose Delaware, Del. Dept. of State Div. of Corp., 1,1 (2007), http://corp.delaware.gov/whycorporations_web.pdf (stating that Delaware is the “favored state of incorporation for U.S. businesses”). According to the State of Delaware website, Delaware is the legal home to “[m]ore than 50% of all publicly-traded companies in the United States including 64% of the Fortune 500.”
authority that other states look to when developing their own statutory and case law. Therefore, the primary examples are from Delaware, but the thinking is meant to be global.

This Article proceeds as follows: Part I discusses the origins of the Rule as a tool used by a court to restrain it from using its authority under equity to review a Board decision for fairness. The courts recognized that this was a necessity in order to protect directors from liability for honest mistakes of judgment that turn out badly. Part II describes how the Rule has been applied under the statutory law that provides the Board with almost unlimited authority to manage the corporation, DGCL § 141(a). Part III discusses SWM as a legal obligation of Board decision making and how the Rule is consistent with and supportive of SWM.

I. MAINTAINING THE BALANCE BETWEEN STATUTORY AUTHORITY AND EQUITY

As early as 1742, equity recognized that corporate boards should not be held liable for honest mistakes of judgment. According to the Lord Chancellor of England:

[Directors] are most properly agents to those who employ them in this trust, and who empower them to direct and superintend the affairs of the corporation. In this respect they may be guilty of acts of commission or omission, of mal-feasance or nonfeasance. Now where acts are executed within their authority, . . . though attended with bad consequences, it will be very difficult to determine that these are breaches of trust. For it is by no means just in a judge, after bad consequences have arisen from such executions of their power, to say that they foresaw at the time what must necessarily happen; and therefore were guilty of a breach of trust.

This judicial policy of protecting board members from liability when their honest mistakes of judgment turn out badly has consistently been identified as a major policy objective of the Rule. Fifty years ago Henry Manne stated that the Rule “preclude[s] the courts from any consideration of honest if inept business decisions, and that seems to be the purpose of the Rule.”

13 DEL. CODE ANN. tit. 8, § 141(a).
14 Charitable Corp. v. Sutton, 2 Atk. 400, 405 (1742) (internal citations omitted).
More recently, courts and commentators have become aware that protecting directors from such liability also allows for optimal risk-taking in corporate decision making:

Ultimately, the discretion granted directors and managers allows them to maximize shareholder value in the long term by taking risks without the debilitating fear that they will be held personally liable if the company experiences losses. This doctrine also means, however, that when the company suffers losses, shareholders may not be able to hold the directors personally liable.\(^{16}\)

Protecting board members from liability when their honest mistakes of judgment turn out badly is not, as it is commonly mistaken to be,\(^{17}\) the Rule. Instead, it is a policy driver cited by the courts in justifying the use of the Rule instead of an automatic fairness review. This will become clear when *Bodell II* is discussed. But first, *Bodell I*\(^{18}\) needs to be the focus of the discussion.

### A. Bodell I

In *Bodell I*, the plaintiffs alleged that the Board had violated its fiduciary duties by initiating a plan to sell no-par value stock for below its fair sales value.\(^{19}\) In response, the court had granted a temporary restraining order.\(^{20}\) However, the Board itself was not accused of self-dealing or personally profiting from the sales.\(^{21}\) Moreover, the statute which allowed for the issuance of no-par value stock, Section 4a of the DGCL,\(^{22}\) provided the Board with unrestrained authority to determine the adequacy of the consideration to be received in exchange for the no-par value stock as long as the Board has authority to do so under the company’s certificate of incorporation.\(^{23}\)

But even in the face of this “absolute power,” the court had no problem in identifying the countervailing power of equity as authority for reviewing the Board’s actions:

So far as the literal language of the section is concerned, the

Directors may from time to time issue no par stock for any consideration they may see fit, even though the price they fix is far below its actual value. What I am now pointing out is simply this - that the statute does not impose any restraint upon the apparent unbridled power of the directors. Whether equity will, in accordance with the principles which prompt it to restrain an abuse of powers granted in absolute terms, lay its restraining hand upon the directors in case of an abuse of this absolute power, is another question which will be presently considered and answered in the affirmative.  

If this was not clear enough, the court also stated: “But notwithstanding the absolute character of the language in which the power to direct the directors is expressed, it cannot be that a court of equity is powerless in proper cases to circumscribe it.”

As authority for its use of its equitable powers in the face of statutory law that suggests otherwise, the court noted “There is no Rule better settled in the law of corporations than that directors in their conduct of the corporation stand in the situation of fiduciaries. While they are not trustees in the strict sense of the term, yet for convenience they have often been described as such.”

Bodell I begins its legal analysis by noting that when statutory law provides the Board with authority, there “accords to the acts of the directors a presumption in favor of their propriety and fairness.” (This is perhaps the source for the famous presumption language in the current Rule formulation.) This presumption is an acknowledgment of Board authority as derived through statutory law.

Nevertheless, in identifying the balance between board authority and equity where a statute provides the maximum amount of managerial discretion, the court applied a balance that was strongly oriented toward equity, requiring the board to demonstrate fairness in their decision making. This was the result of the factual finding that the sale of equity was to occur at a price below fair market.

The application of the court’s fairness review focused primarily on the substantive nature of the stock sales as regards their overall benefits to

25 Id.
26 Id. Directors are fiduciaries of both the corporation and stockholders. See Robert C. Clark, Agency Costs versus Fiduciary Duties, in Principals and Agents: The Structure of Business 56 (John W. Pratt & Richard J. Zeckhauser eds., 1985). This gives the misleading impression that they serve two masters. In Part III, it is described how the Court reconciles this unusual situation by taking the position that the fiduciary duties owed to the corporation are for the benefit of the stockholders. See infra, Part III.
27 Id.
28 Id. at 448.
29 Id. at 444.
stockholders but also appears to have taken into consideration director conduct and motivations by noting that the Board was not interested in the transaction\textsuperscript{30} and by concluding that “A complete absence of selfish motive and of personal profit on their part forcefully argues that judgment was formed in absolute honesty and entire good faith.”\textsuperscript{31}

The court found that the shares were not sold below the fair sales value, absolving the Board of any liability.\textsuperscript{32} The court also vacated the outstanding restraining order.\textsuperscript{33} However, was a fairness review really required? This was the issue taken up by the Delaware Supreme Court in \textit{Bodell II}.

\textbf{B. Bodell II}

In \textit{Bodell I}, the court made an emphatic declaration that the power of equity can never be denied, even in the face of a statutory law that provides the Board with absolute authority in a specific area of corporate decision making and where there is no evidence of director self-interest. This declaration is not in dispute.\textsuperscript{34} A court of equity always has the right to circumscribe Board authority when the court perceives that a wrong has been committed.\textsuperscript{35} However, what \textit{Bodell I} did not answer is whether a challenged Board decision would always come under a fairness review, placing the Board in the position of always facing significant potential liability for honest mistakes of judgment that turn out badly. Does equity require this? If not, what kind of decision making tool or filter would the court use to make the determination that a fairness review was or was not required? That tool turns out to be the Rule, the standard of judicial review

\textsuperscript{30} \textit{Id.} at 444.

\textsuperscript{34} Sample v. Morgan, 914 A. 2d 647, 675 n.54 (Del Ch. 2007) (“That the operation of Delaware corporate law depends importantly on the subjection of action in conformity with legal rules to equitable principles has long been understood.”).
\textsuperscript{35} \textit{Bodell I}, 132 A. at 446. \textit{See also}, Lofland v. Cahall, 118 A. 1, 3 (Del. 1922) (“Directors of a corporation are trustees for the stockholders, and their acts are governed by the Rules applicable to such a relation, which exact of them the utmost good faith and fair dealing, especially where their individual interests are concerned.”); Adams v. Clearance Corporation, 121 A. 2d 302, 306 (Del. 1956) (“When the directors, or the majority stockholders, exercise a power that the general corporation law confers upon them, it is competent for any one who conceives himself aggrieved thereby to invoke the processes of a court of equity for protection against its oppressive exercise. Notwithstanding therefore the absolute terms in which the power of the directors is expressed, equity will afford protection against its wrongful use.” (citations and quotes omitted)); Schnell v. Chris-Craft, 285 A.2d 437, 439 (Del. 1971) (“[I]nequitable action does not become permissible simply because it is legally possible.”).
that the Delaware Supreme Court used to affirm the Chancery court’s decision (Bodell II).36

In Bodell II, the court was not reticent in taking issue with both the Chancery court’s apparent lack of respect for the managerial discretion provided by statutory law and its fairness standard of review. According to the court, “the broad and general language of the statute, embodied in the Certificate of Incorporation, should be liberally construed in favor of the directors.”37 Continuing with this line of thinking, the court also said:

The Legislature, in enacting the statute, meant to clothe the directors of a corporation with exceptionally large powers in the sale of its no par value stock. If in the particular case there is nothing to show that the directors did not exercise their discretion for what they believed to be the best interest of the corporation, certainly an honest mistake of business judgment should not be reviewable by the Court.38

This is a direct repudiation of the approach applied by the Chancery court and perhaps the first case that explained why fairness cannot be part of the Rule formulation. It makes clear that protecting director decision making when it only involves honest mistakes of business judgment (most critical when director liability is involved) cannot coexist with a fairness standard of review. A fairness review is only concerned with an objective analysis of whether or not the results were fair to the plaintiffs and does not take into consideration whether the decision was an honest mistake of business judgment. Either fairness or the policy of protecting honest mistakes of business judgment can be a component of the Rule, but not both. They are mutually exclusive. The Delaware Supreme Court chose the latter in formulating its Rule, an approach that still stands today:

It may be impossible to lay down a general rule on this subject, but we think the discretion of a board of directors in the sale of its no par value stock should not be interfered with, except for fraud, actual or constructive, such as improper motive or personal gain or arbitrary action or conscious disregard of the interests of the corporation and the rights of its stockholders.39

By using the language of “discretion of a board of directors” this Rule formulation acknowledges the managerial authority of the Board as provided by statutory corporate law.40 But most importantly, it reduces the demands of equity by only requiring the absence of certain types of

---

36 This was perhaps the first case where the Delaware courts applied the Rule under its General Corporation Law (DGCL), a statutory set of laws created in 1899 to allow for general incorporation. See An Act Providing a General Corporation Law, 21 Del. Laws ch. 273 (1899).
37 Bodell II, 140 A. 264, 267 (Del. 1927).
38 Id.
39 Id.
40 DEL. CODE ANN. tit. 8, § 141(a).
improper Board conduct, actual or constructive fraud, in order to allow the
decision to stand. Moreover, in formulating its Rule without the inclusion
of fairness as a substantive component, the court was establishing a critical
precedent under Section 4a of the old DGCL (currently DGCL § 152\[41\]) and
since applied to DGCL § 141(a),\[42\] that there are significant limits to the
reach of equity at least when statutory law grants the board seemingly
absolute authority to make corporate decisions.

In affirming the Chancery Court’s decision, the court found no
evidence that the Board was not acting in the best interest of the
corporation and the fact that the Board was not interested in the transaction
served as significant evidence of this.\[43\] The Court concurred with the lower
court and found that the directors had utilized their best judgment and acted
in good faith.\[44\] Therefore, the fairness review as required by Bodell I was
not required.

C. Fairness (Entire Fairness) as a Standard of Review

Before moving to a discussion of the Rule under DGCL § 141(a), it is
important to understand what is meant by a fairness review. Bodell I
required a rigorous review of the stock sales, focusing on both the
substantive and procedural nature of the sales and on the conduct and
motivations of the directors. Such a fairness review would have created a
heavy burden on a Board if it were conjured up every time an honest
mistake of judgment turned out badly. This is essentially why the Court in
Bodell II found it inappropriate to use it unless its Rule had been overcome.

The fairness review found in Bodell I is the forerunner to the review
currently used by a Delaware court when the Rule is overcome, “entire
fairness.”\[45\] Entire fairness is a court’s most onerous standard of review\[46\]
and the one that the Board would most like to avoid, encouraging the Board
to conduct its decision making process within the confines of the Rule.
However, while starting afresh under entire fairness does put a heavy
burden on the Board, it “is not an implication of liability.”\[47\] Entire fairness

\[41\] Del. Code Ann. tit. 8, § 152.
\[42\] Del. Code Ann. tit. 8, § 141(a).
\[43\] Bodell II, 140 A. 264, 267 (The directors were not going to financially
benefit from the transaction.).
\[44\] Id. at 268.
\[45\] Cinerama, Inc. v. Technicolor, Inc., 663 A. 2d 1156, 1162 (Del. 1995) (“If
the [R]ule is rebutted, the burden shifts to the defendant directors, the proponents
of the challenged transaction, to prove to the trier of fact the “entire fairness” of the
transaction to the shareholder plaintiff.”) See also, Solomon v. Armstrong, 747
A.2d 1098, 1112 (Del. Ch. 1999) (In these scenarios, “the board’s decision is
reviewed through the lens of entire fairness, pursuant to which the directors lose
the presumption of good business judgment, and where the Court more closely
focuses on the details of the transaction and decision-making process in an effort to
assess the fairness of the transaction’s substantive terms.”).
\[47\] Emerald Partners, 787 A.2d at 93.
requires a review of the result for “substantive fairness,” with the burden of proof being on the defendants. According to Ezra (a.k.a. Lawrence) Mitchell, an “[entire] fairness [review] contemplates a range of values and fiduciary conduct that properly is analyzed within the totality of a transaction’s circumstances.” When this standard of review applies, the court must “consider carefully how the board of directors discharged all of its fiduciary duties with regard to each aspect of the non-bifurcated components of entire fairness: fair dealing and fair price.” Moreover, “[n]ot even an honest belief that the transaction was entirely fair will be sufficient to establish entire fairness. Rather, the transaction itself must be objectively fair, independent of the board’s beliefs.”

Fair dealing “embraces questions of when the transaction was timed, how it was initiated, structured, negotiated, disclosed to the directors, and how the approvals of the directors and the stockholders were obtained.” In addition, “[p]art of fair dealing is the obvious duty of candor . . . . Moreover, one possessing superior knowledge may not mislead any stockholder by use of corporate information to which the latter is not privy.” Fair price “relates to the economic and financial considerations of the proposed [transaction], including all relevant factors: assets, market value, earnings, future prospects, and any other elements that affect the intrinsic or inherent value of a company’s stock.”

While in theory the review for entire fairness is a non-bifurcated process, in practice the court has great discretion in focusing more on one versus the other. For example, “at least in non-fraudulent transactions, price may be the preponderant consideration. That is, although evidence of fair dealing may help demonstrate the fairness of the price obtained, what ultimately matters most is that the price was a fair one.” Or, perhaps in the uncommon fact pattern where a stock price, sale price of real estate or level of compensation, etc. is not at issue, e.g., the Board of a non-statutory

55 Valeant Pharmaceuticals Intern. v. Jerney, 921 A. 2d 732 (Del. Ch. 2007) (focusing on fair dealing in a Board decision to pay large cash bonuses to themselves and to certain non-Board employees). In the cash bonus context of Valeant, even if the “board used an unfair process to authorize the bonuses does not end the court's inquiry because it is possible that the pricing terms were so fair as to render the transaction entirely fair. Nevertheless, where the pricing terms of a transaction that is the product of an unfair process cannot be justified by reference to reliable markets or by comparison to substantial and dependable precedent transactions, the burden of persuading the court of the fairness of the terms will be exceptionally difficult.” Id. at 748.
56 ENCITE LLC at text associated with footnote 176.
closely held corporation provided themselves with advantageous ways to liquidate their illiquid company stock holdings through company repurchases without providing such means for non-employee stockholders,\(^57\) only fair dealing may apply.\(^58\)

The heavy burden found in both the fairness review applied in *Bodell I* and the entire fairness review, at least in terms of the volume and duration of litigation, requires some way to avoid an automatic fairness review of Board decisions that turn out badly for shareholders, making the Rule a necessity.

### D. Summary

*Bodell I* stands for the raw power of equity and how it can potentially trump statutory law, even when statutory law provides the Board with unlimited decision making authority. According to the court, this was true even though the court acknowledged that there “accords to the acts of the directors a presumption in favor of their propriety and fairness.”\(^59\) *Bodell II* stands for the need to truly respect statutory authority, requiring the courts to restrain the power of equity in the face of this authority. This required restraint provides the foundation for understanding the essence of the Rule.

*Bodell II*’s Rule formulation guides a court in how it should apply this restraint in its review of a Board decision. It first brings to the fore the requirement that a court must respect managerial discretion. This means that fairness cannot be the first stop in a court’s review. Instead, a gentler approach must be taken, an approach that involves fiduciary duties, not fairness. There is no room in the Rule formulation for fairness; fairness and fiduciary duties must be mutually exclusive. A fairness review is not allowed unless a fiduciary duty has been breached or there is some taint surrounding the decision such as director’ interestedness. This is the fundamental essence of the Rule and if there is one thing that law students must understand about the Rule, this is it.

### II. THE BUSINESS JUDGMENT RULE AND § 141(A)

The significance of the Rule is at its peak when it is applied under the critically important statutory corporate law that provides the Board with authority to manage the corporation. In Delaware this would be DGCL § 141(a): “The business and affairs of every corporation organized under this chapter shall be managed by or under the direction of a board of directors, except as may be otherwise provided in this chapter or in its certificate of incorporation.”\(^60\)

\(^{59}\) 132 A. at 444, 446.

\(^{60}\) DEL. CODE ANN. tit. 8, § 141(a) (2011).
On its face, this statutory law can be interpreted as providing the Board with unlimited managerial authority, similar to the authority provided by DGCL Section 4a as discussed in Bodell I and II. Unlike Section 4a and its successor DGCL § 152, DGCL 141(a) is an opt-out or default rule, not an opt-in rule. As a default rule this delegation of unlimited authority to the Board is not expected to be substantively altered through a charter amendment. In practice, this has definitely been the case, especially in the context of public companies.

Most importantly, both are examples of the private ordering or enabling approach found in statutory corporate law. According to the Court in Williams v Geier, “At its core, the Delaware General Corporation Law is a broad enabling act which leaves latitude for substantial private ordering, provided the statutory parameters and judicially imposed principles of fiduciary duty are honored.” Private ordering of authority is considered efficient because it allows for the implementation of market-driven corporate governance arrangements. That is, “observed governance choices are the result of value-maximizing contracts between stockholders and management.” The courts understand that this private ordering has been agreed to under the sanction of statutory corporate law and will feel compelled to respect the wishes of those parties to have the Board manage the company with minimal interference, including interference from the courts. Such respect is not speculative. For example, when a corporation amends its charter to provide for an exculpation clause to protect directors from duty of care liability as allowed under the authority granted by DGCL

---

61 DEL. CODE ANN. tit. 8, § 152.
63 According to Professor Jonathan Macey:

[B]ecause informal norms generate outcomes that are generally welfare-enhancing, while law at best generates outcomes that are mixed (and tend strongly towards the welfare-reducing), informal norms should come with a strong presumption of legitimacy. Formal legal Rules are likely to be inefficient at best and amorally redistributive at worst. Thus, under a wide range of circumstances, such as when society is interested in maximizing utilitarian considerations, and when society is interested in resolving standard legal disputes within groups, lawmakers are unlikely to improve upon the customary Rules the group develops through voluntary, private interaction.

§ 102(b)(7), the courts have shown great deference for the authority provided by this type of amendment. In essence, the Board and stockholders have agreed to contract away the board’s fiduciary duty of care. Thus, private ordering provides another policy rationale for why the courts should restrain themselves when applying equitable principles to Board decision making, adding weight to the lever on the side where statutory law rests and away from equity under the Rule.

Why stockholders permit the Board unrestrained authority under both DGCL § 152 and DGCL § 141(a) is based on the recognition that the Board, with superior information, including confidential information, is in the best position to make the most important corporate decisions. The parties to the corporate contract recognize that a centralized, hierarchical authority is necessary for the successful management of a corporation, especially as it grows to any significant size.

66 DEL. CODE ANN. tit. 8, § 102(b)(7). Section 102(b)(7) bars any claim for money damages against the director defendants based solely on the board's alleged breach of its duty of care.

68 Id.

69 ROBERT CHARLES CLARK, CORPORATE LAW, app. at 801–16 (1986) (arguing that “facilitation of cooperation” allows for efficiently completing large tasks). According to Kenneth Arrow, information scattered over a large organization must be both filtered and transmitted to a centralized authority in order for a large organization to make informed decisions and minimize error in decision making. KENNETH J. ARROW, THE LIMITS OF ORGANIZATION 68-70 (1974). Arman Alchian and Harold Demsetz argued that a centralized authority was necessary to eliminate the problems associated with having a large number of stockholders:

If every stock owner participated in each decision in a corporation, not only would large bureaucratic costs be incurred, but many would shirk the task of becoming well informed on the issue to be decided, since the losses associated with unexpectedly bad decisions will be borne in large part by the many other corporate stockholders. More effective control of corporate activity is achieved for most purposes by transferring decision authority to a smaller group, whose main function is to negotiate with and manage (renegotiate with) the other inputs of the team.

Such deference to Board authority is shared by the courts in its application of the Rule. The Delaware Supreme Court has described the Rule as “an acknowledgment of the managerial prerogatives of Delaware directors under Section 141(a),” a point if seriously taken will help make sure the balance does not tip too far towards equity:

The “business judgment” rule is a judicial creation that presumes propriety, under certain circumstances, in a board's decision. Viewed defensively, it does not create authority. In this sense the “business judgment” rule is not relevant in corporate decision making until after a decision is made. It is generally used as a defense to an attack on the decision's soundness. The board's managerial decision making power, however, comes from § 141(a). The judicial creation and legislative grant are related because the “business judgment” rule evolved to give recognition and deference to directors' business expertise when exercising their managerial power under § 141(a).

Unlike the defensive nature of the policy rationale provided directors in Bodell II, i.e., directors should not be blamed for honest mistakes of business judgment, this policy rationale focuses on how corporate decision making is enhanced because of a Board’s business expertise. Embellishing on this important point, the Court has also stated that “the core rationale of the Rule is that judges are poorly positioned to evaluate the wisdom of business decisions and there is little utility to having them second-guess the determination of impartial decision-makers with more information (in the case of directors)....”

Judges need to respect Board decision making for the simple reason they are inferior to the Board in terms of determining what is the best corporate decision and therefore should not take on the role of reviewing the substantive decisions of the Board, including determining “the appropriate degrees of business risk.” Judges recognize that they lack information, decision-making skills, expertise, and interests (i.e., lacking a stake in the company) relative to corporate management. As stated by the Michigan Supreme Court in the famous case of Dodge v. Ford Motor Co.,

---

70 Aronson v. Lewis, 473 A.2d 805, 812 (Del. 1984) (citing Zapata Corp. v. Maldonado, 430 A.2d 779, 782 (Del. 1981)).
72 Id.
73 Corwin v. KKR Financial Holdings LLC, 125 A. 3d 304, 313-14 (Del. 2015).
“[J]udges are not business experts.”\textsuperscript{77} Therefore, as long as the courts do not find a breach in a board’s fiduciary duties, they typically do not want to get involved in any type of substantive review of a board decision.\textsuperscript{78}

In part, the humility expressed by the courts in terms of their own decision making abilities is reflective of their understanding that making a business decision can be the result of a long and complicated thought process requiring expertise they do not have. The following statement, in the context of a Board trying to make a wealth maximizing decision on behalf of stockholders, makes that point:

\[D\]etermining whether a business decision is stockholder wealth-maximizing is not just about plugging in a formula and calculating the result, which any computer or calculator can do. Rather, it refers to the specific formula that will be utilized by management to determine if a particular decision maximizes stockholder wealth. One can think of this in terms of a mathematical formula where the decision maker is given the responsibility of choosing the variables and estimating the coefficients of those variables. This requires many sources of knowledge and expertise that chancellors and judges lack, including experience in the particular business that the company may be in, product and company knowledge, management skills, financial skills, creative and analytical thinking pertinent to a company’s business, confidential information, and so on. For example, who has the knowledge and expertise to decide whether a distinctive corporate culture enhances or detracts from stockholder value? The clear answer is that the board and its executive management are the proper locus of authority for making this decision.\textsuperscript{79}

In sum, what is desired by the courts in terms of corporate authority can be summarized in the following statement by Professor Stephen Bainbridge: the “[p]reservation of managerial discretion should always be the null hypothesis.”\textsuperscript{80} This approach is supported not only by the desire not to punish the Board for honest mistakes of judgment but also by two additional policy drivers, respect for the private ordering of corporate governance arrangements that almost always place the bulk of authority for decision making with the Board and the court’s knowledge that it lacks business expertise. All three policy drivers encourage a court to use the Rule and discourage it from going directly to an entire fairness review.

\textsuperscript{79} Id. at 408.
A. The Business Judgment Rule Formulation

In contrast to the Rule formulation found in Bodell II, the current formulation of the Rule under § 141(a), the Aronson formulation, includes an aspect of the duty of care, the need for a Board to make a decision “on an informed basis:

It is a presumption that in making a business decision the directors of a corporation acted on an informed basis, in good faith and in the honest belief that the action taken was in the best interests of the company. Absent an abuse of discretion, that judgment will be respected by the courts. The burden is on the party challenging the decision to establish facts rebutting the presumption.\(^{81}\)

For many, this additional requirement was a mistake, leading to the heavily criticized decision in the famous corporate law case of Smith v Van Gorkom,\(^ {82}\) where the Court made absolutely clear that an uninformed Board decision could overcome a court’s deference to board authority and lead to director liability.\(^ {83}\) In Van Gorkom, this liability occurred despite the fact that the Board had agreed to sell the company for a forty-eight percent premium above the previous day’s closing price.\(^ {84}\)

Under Van Gorkom, to establish that a Board has made an informed decision, the court must determine “whether the directors have informed themselves ‘prior to making a business decision, of all material information reasonably available to them.’”\(^ {85}\) Gross negligence is the standard used to determine if there has been a breach of the directors’ duty of care in becoming informed.\(^ {86}\)

---

\(^{81}\) Aronson v. Lewis, 473 A.2d 805, 812 (Del. 1984) (citations omitted). In Aronson, the Court addressed the issue of “when is a stockholder’s demand upon a board of directors, to redress an alleged wrong to the corporation, excused as futile prior to the filing of a derivative suit?” Id. at 807.

\(^{82}\) 488 A.2d 858, 873 (Del. 1985).

\(^{83}\) Frank Easterbrook and Daniel Fischel found the criticism of Van Gorkom to be entirely justified:

It is not hard to see why the case produced such a swift and sweeping reaction. Judicial inquiry into the amount of information managers should acquire before deciding creates the precise difficulties that the business judgment rule is designed to avoid. Information is necessary for corporate managers to maximize the value of the firm. But there is a limit to how much managers should know before making a decision.

\(^{85}\) A.2d 858, 872 (quoting Aronson, 473 A.2d at 812).

\(^{86}\) Id. at 873.
Soon after *Van Gorkom*, the Delaware General Assembly, responding to concerns that directors faced too much in the way of personal liability, enacted DGCL 102(b)(7), a statutory provision that protects directors from monetary liability for any actions arising from a breach of their duty of care if corporations opt-in through a charter amendment. In essence, Delaware lawmakers have given Delaware corporations the opportunity to veto the *Van Gorkom* decision if they found it was not in their best interests.

However, consistent with the underlying policies of not punishing the Board’s honest mistakes of judgment and deferring to Board decision making authority as provided by private ordering and the court’s recognition of its lack of business expertise, the “informed” element of the Rule refers only to “procedural due care,” not “substantive due care.” According to the Delaware Supreme Court in *Brehm v Eisner*:

> Courts do not measure, weigh or quantify directors' judgments. We do not even decide if they are reasonable in this context. Due care in the decisionmaking context is process due care only.

---

87 DEL. CODE ANN. tit. 8, § 102(b)(7). Under § 102(b)(7), stockholders are allowed to incorporate into their certificate of incorporation:

A provision eliminating or limiting the personal liability of a director to the corporation or its stockholders for monetary damages for breach of fiduciary duty as a director, provided that such provision shall not eliminate or limit the liability of a director: (i) For any breach of the director’s duty of loyalty to the corporation or its stockholders; (ii) for acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law; . . . ; or (iv) for any transaction from which the director derived an improper personal benefit.

88 *Id.*

89 *Brehm v. Eisner*, 746 A. 2d 244 at 264.

90 *Id.* Interestingly, a valid waste claim may still exist even if the plaintiff cannot overcome the presumption of the Rule. In *re Walt Disney Co. Derivative Litigation*, 906 A. 2d 27, 74 (Del. 2006). In essence, waste is a standard of review that stands outside the Rule and is applicable when irrationality is not found to be associated with a lack of good faith:

To recover on a claim of corporate waste, the plaintiffs must shoulder the burden of proving that the exchange was so one sided that no business person of ordinary, sound judgment would conclude that the corporation has received adequate consideration. A claim of waste will arise only in the rare, unconscionable case where directors irrationally squander or give away corporate assets. This onerous standard for waste is a corollary of the proposition that where business judgment presumptions are applicable, the board's decision will be upheld unless it cannot be attributed to any rational purpose.
In sum, meeting the requirements of procedural due care under the Rule means that a Board has not reached their decision by a grossly negligent process that includes the failure to consider all material facts reasonably available.  

B. Rebutting the Presumption

Since Bodell II, the courts have created a fuller picture on what kinds of conduct (fiduciary duties) and lack of taint surrounding the decisions, e.g., disinterestedness, independence and rational business purpose, are required in order for a Board decision to receive the protections of the Rule:

The business judgment rule, as a general matter, protects directors from liability for their decisions so long as there exist “a business decision, disinterestedness92 and independence,93 due care, Freedman v. Adams, 58 A. 3d 414, 417 (Del. 2013) citing In re the Walt Disney Company Derivative Litigation, 906 A.2d 27 at 74. (Quotations and citations omitted.).

91 Brehm v. Eisner, 746 A. 2d 244, n.66 (Del. 2000).
93 Under Delaware law,

Directors must not only be independent, but must act independently. Kahn v. Tremont Corp., 694 A.2d 422, 429 (Del. 1997). As this Court has previously stated in defining director independence: “[i]t is the care, attention and sense of individual responsibility to the performance of one's duties ... that generally touches on independence.” Id. at 430, quoting Aronson v. Lewis, 473 A.2d 805, 816 (Del. 1984). Where only one director has an interest in a transaction, however, a plaintiff seeking to rebut the presumption of the business judgment rule under the duty of loyalty must show that “the interested director controls or dominates the board as a whole.” Cinerama, Inc. v. Technicolor, Inc., 663 A.2d 1156, 1168 (Del. 1995).

A party alleging domination and control of a company's board of directors bears the burden of proving such control by showing a lack of independence on the part of a majority of the directors. Odyssey Partners, L.P v. Fleming Cos., Inc., 735 A.2d 386, 407 (Del. Ch. 1999). Theoretically, a director can be “controlled” by another, for purposes of determining whether the director lacked the independence necessary to consider the challenged transaction objectively. A controlled director is one who is dominated by another party, whether through close personal or familial relationship or through force of will. Orman v. Cullman, 794 A.2d 5, 25 n. 50 (Del. Ch. 2002). A director may also be deemed
good faith and no abuse of discretion and a challenged decision does not constitute fraud, illegality, ultra vires conduct or waste.” There is a presumption that directors have acted in accordance with each of these elements, and this presumption cannot be overcome unless the complaint pleads specific facts demonstrating otherwise. Put another way, under the business judgment rule, the Court will not invalidate a board’s decision or question its reasonableness, so long as its decision can be attributed to a rational business purpose.96

If the presumption has been overcome, “the burden then shifts to the director defendants to demonstrate that the challenged act or transaction

"controlled" if he or she is beholden to the allegedly controlling entity, as when the entity has the direct or indirect unilateral power to decide whether the director continues to receive a benefit upon which the director is so dependent or is of such subjective material importance that its threatened loss might create a reason to question whether the director is able to consider the corporate merits of the challenged transaction objectively. Id.

94 In Lyondell v Ryan, the Delaware Supreme Court stated that failing to act in good faith means that a Board has intentionally failed “to act in the face of a known duty to act, demonstrating a conscious disregard for his duties.” Lyondell Chem. Co. v. Ryan, 970 A.2d 235, 243 (Del. 2009).
95 For example, it may be an abuse of discretion when the Board refuses to pay out a dividend even though the company has accumulated a large amount of earnings. As stated by the Chancery Court in Eshleman v. Keenan:

That courts have the power in proper cases to compel the directors to declare a dividend, is sustained by respectable authorities. But that they should do so on a mere showing that an asset exists from which a dividend may be declared, has never, I dare say, been asserted anywhere. In such a case a court acts only after a demonstration that the corporation's affairs are in a condition justifying the declaration of the dividend as a matter of prudent business management and that the withholding of it is explicable only on the theory of an oppressive or fraudulent abuse of discretion.

22 Del.Ch. 82, 194 A. 40 (1937). See also, Moskowitz v. Bantrell, 190 A. 2d 749, 750 (Del. 1963) citing Eshleman (In discussing when a court may direct a Board to declare a dividend, the court said: “The principle of law applicable to the relief sought is well settled. Before a court will interfere with the judgment of the Board of Directors, fraud or gross abuse of discretion must be shown.”).
was entirely fair to the corporation and its stockholders." As a result, even though the decision may have lost the protections of the Rule, the court cannot go directly to a determination of damages. Instead, it must first make a determination that the transaction was not entirely fair. A finding of such “will be the basis for a finding of substantive liability.”

Under this Rule formulation, relative to the Rule found in Bodell II, the balance provided by the Rule has shifted toward equity through the explicit requirements of independence, a rational business purpose and most importantly, the relatively new requirement that the Board be informed. These are additional ways for a court to find taint in a Board’s decision and thereby move it out of the category of board decisions that the courts may not scrutinize and into the realm of fairness review, notwithstanding the prevalence of exculpation clauses that mute the effect of a finding that the Board was not informed when it made the challenged decision.

Therefore, while director conduct and lack of taint requirements under this Rule formulation may seem more extensive and demanding then found in Bodell II, its purpose is exactly the same, to be a tool the court can use to determine whether a Board decision should stand or be subject to a fairness review, i.e., an entire fairness review. These additional requirements can be understood as simply technical corrections when put in the context of maintaining the Rule as the first and most important line of defense against an entire fairness review. In that vein, the presumption language can be understood to mean that the court must presume that a board decision does not come under a fairness review so long as a board's fiduciary duties have been met.

C. The Rule as Abstention Doctrine?

Stephen Bainbridge, one of the most important corporate law scholars of the past 20 years, has argued that the Rule is an abstention doctrine. As such, “the business judgment rule’s function is to preclude courts from deciding whether the directors violated their duty of care.” Even with the courts being required to focus on procedural due care, the courts are still precluded, under the Rule, from reviewing for substantive due care, i.e., the quality of a Board’s decisions, or for breaches in the duty of care that arise from ordinary negligence in becoming informed. According to Bainbridge, the courts are willing to abstain from the review of most duty of care claims because they find this the best way to protect Board authority from unwarranted interference by the courts:

---

97 Id. at 91.
98 Id. at 93.
99 Id.
101 Bainbridge, supra note 80.
102 Id. at 101.
Establishing the proper mix of deference and accountability thus emerges as the central problem in applying the business judgment Rule to particular situations. Given the significant virtues of discretion, however, one must not lightly interfere with management or the board’s decision-making authority in the name of accountability. Preservation of managerial discretion should always be the null hypothesis.\footnote{Id. at 109.}

Duty of care claims that go beyond the judicially defined carve-out will quickly be dismissed without discovery even under the lenient standard of “reasonable conceivability,” the standard of review that the Delaware courts use in determining whether a complaint will survive a defendant’s motion to dismiss.\footnote{According to the Chancery Court:}

As recently reaffirmed by the Delaware Supreme Court, the governing pleading standard in Delaware to survive a motion to dismiss is reasonable conceivability. That is, when considering such a motion, a court must: accept all well-pleaded factual allegations in the Complaint as true, accept even vague allegations in the Complaint as “well-pleaded” if they provide the defendant notice of the claim, draw all reasonable inferences in favor of the plaintiff, and deny the motion unless the plaintiff could not recover under any reasonably conceivable set of circumstances susceptible of proof. This reasonable “conceivability” standard asks whether there is a “possibility” of recovery. If the well pled factual allegations of the complaint would entitle the plaintiff to relief under a reasonably conceivable set of circumstances, the court must deny the motion to dismiss.

\begin{quote}
\end{quote}

\footnote{As pointed out by Robert Rhee, the concept of the Rule as abstention doctrine does not imply judicial abnegation:}

The business judgment rule cannot be an abnegation of power because its very existence arises from the exercise of judicial lawmakers. The court's power to give deference must also mean the court's power to take it…. Rather, the systematic outcomes of no liability are achieved because the business judgment rule reflects a reasoned judgment of courts on the nature of a wrong; they evince the exercise of judicial power, and not the relinquishment of it.”

\begin{quote}
\end{quote}
But the Rule as a means to preclude duty of care claims could not have been the Rule’s original intent, at least under Delaware corporation law. At the time of Bodell I and II, 1926 and 1927 respectively, the Board’s fiduciary duties did not include a duty of care.\textsuperscript{106} It wasn’t until 1963 that the Delaware courts recognized the duty of care as a Board duty and it wasn’t even in the context of the Rule, but in regard to the Board’s oversight of the company.\textsuperscript{107} Finally, in 1971, the Delaware Chancery Court established that being informed was part of a Board’s fiduciary duties under the Rule.\textsuperscript{108}

The observation that the duty of care was a late arrival as part of a Board’s fiduciary duties is not meant to imply that the Rule was not originally meant to be an abstention doctrine. That is, it is not necessary to focus only on the preclusion of duty of care claims to come to the conclusion that the Rule is and has always been an abstention doctrine, at least since Bodell II. As already discussed, as a result of the application of the Rule formulation, the court must abstain from a fairness review when the plaintiff has failed to show that the Board decision has been tainted with fraud, interest, lack of good faith, abuse of discretion, lack of independence, gross negligence in becoming informed, etc.\textsuperscript{109} Therefore, in a very global and fundamental way, the Rule can be understood as an abstention doctrine, requiring the court to abstain from a fairness review unless some sort of director misconduct or taint surrounding the decision is found.

D. Summary

The role played by the Rule does not change under DGCL 141(a).\textsuperscript{110} However, two additional policy drivers are identified that reinforces the use of the Rule as a means to restraints the courts from reviewing a Board decision for fairness. First, respect for the private ordering of corporate governance arrangements which grants extensive authority to the Board to make decisions on behalf of the corporation. Second, the recognition by

\textsuperscript{107} Id. citing Graham v. Allis-Chalmers Manufacturing Co., 188 A.2d 125, 130 (Del. 1963) (As stated in Graham, “[i]t appears that directors of a corporation in managing the corporate affairs are bound to use that amount of care which ordinarily careful and prudent men would use in similar circumstances.”).

\textsuperscript{108} Id. at 148 citing Kaplan v. Centex Corp., 284 A.2d 119 (Del. Ch. 1971) (“Application of the Rule of necessity depends upon a showing that informed directors did, in fact, make a business judgment authorizing the transaction under review.”).

\textsuperscript{110} DEL. CODE ANN. tit. 8, § 141(a) (2011).
the courts that they are not business experts, meaning they must typically defer to the judgment of the Board in the determination of whether or not a Board decision is wealth maximizing. In addition, taints surrounding a business decision now include lacking independence and a rational business purpose. Moreover, the Rule is an abstention doctrine not just in terms of precluding duty of care claims, as persuasively argued by Stephen Bainbridge, but also in a more fundamental way, by requiring the courts to abstain from a fairness review if there is no breach in fiduciary duties or taint surrounding a Board decision.

III. THE RULE AND THE OBJECTIVE OF SWM

Starting with the Aronson formulation may also mislead one into believing that the objective of the BJR is not SWM. This is a result of the formulation not expanding on what it means for directors to act “in the best interests of the corporation.”111 This opens the door for some to argue that the objective of Board decision making is not SWM, but the balancing of the interests of the multiple stakeholders that interact with the corporation. This point is very timely as a number of academics recently signed a statement arguing in part that the Rule serves as evidence that the Board is under no legal obligation to maximize the wealth of stockholders:

10. Contrary to widespread belief, corporate directors generally are not under a legal obligation to maximize profits for their stockholders. This is reflected in the acceptance in nearly all jurisdictions of some version of the business judgment rule, under which disinterested and informed directors have the discretion to act in what they believe to be in the best long term interests of the company as a separate entity, even if this does not entail seeking to maximise short-term stockholder value. Where directors pursue the latter goal, it is usually a product not of legal obligation, but of the pressures imposed on them by financial markets, activist stockholders, the threat of a hostile takeover and/or stock-based compensation schemes.112

Does the Rule really serve as evidence that corporate law does not require the Board to maximize shareholder value? This Part makes the argument that the answer is a decisive “no.”

111 473 A.2d 805, 812.
112 Lynn Stout, et al., The Modern Corporation Statement on Company Law, https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2848833 (This document was signed by 55 signatories, mainly corporate law scholars, but also including some prominent practitioners such as Martin Lipton, the purported inventor of the poison pill.).
A. SWM as the Objective of Corporate Governance

There are a number of different reasons and explanations for why it is optimal to have SWM as the objective of corporate governance and why corporate law should support that objective by imposing legal obligations on the Board. First, unlike a stakeholder approach (to be discussed) where the board of directors is given the unenviable task of balancing the interests of multiple stakeholders without maximizing the interests of any, SWM allows for the maximization of an objective function. 113 Second, by serving only one master, shareholders, a Board can held more accountable for its decisions. According to Frank Easterbrook and Daniel Fischel, “a manager told to serve two masters … has been freed of both and is answerable to neither. Faced with a demand from either group, the manager can appeal to the interests of the other.”114 According to Jensen, if a stakeholder approach is taken, then “[t]he result will be confusion and lack of purpose that will fundamentally handicap the firm in its competition for survival.” 115 Third, according to Easterbrook and Fischel, one can think of SWM as the default Rule under corporate law because it is “the operational assumption of successful firms.” 116 Fourth, according to John Boatwright, “corporate decision making is more efficient and effective when management has a single, clearly defined objective and shareholder wealth maximization provides not only a workable decision guide but one that, if pursued, increases the total wealth creation of the firm.”117

Why SWM is preferable as the corporate objective can also be explained through two models of the corporation, the principal-agent model and the nexus of contracts model.

1. Principal-Agent Model

In a principal-agent model of the corporation, shareholders are viewed as owners of the corporation and Boards are their agents. 118 However, the typical separation of ownership from control in the corporation creates great potential for managerial self-dealing and shirking. If realized, the results are agency costs, Board decisions that are not focused on SWM. Agency costs are a detriment to shareholder profit. Therefore, directors

114 EASTERBROOK & FISCHEL, supra note 83, at 38.
115 Jensen, supra note 112, at 11.
116 EASTERBROOK & FISCHEL, supra note 83, at 36.
should be legally bound to minimize agency costs with the objective of maximizing shareholder profits.

2. Nexus of Contracts Model

Michael Jensen and William Meckling would describe an organization that takes the corporate form as a legal fiction that serves “as a nexus for a set of contracting relationships among individuals.”119 Under a nexus of contracts or “contractarian” model of the corporation, shareholders are not perceived to own the corporation but are considered to be only one of many parties that contract with the corporation.120 Nevertheless, the board of directors still has fiduciary duties to maximize shareholders wealth.121 This is a result of the hypothetical bargain struck between shareholders and the other parties in the corporation.122

In this hypothetical bargain, shareholders, the sole claimants to the residual cash flows generated by the firm, would argue that since they are the least contractually protected versus other parties, they deserve SWM as the gap filler in their corporate contract.123 That is, they are the parties to the corporate contract that have the greatest risk of ending up with nothing as a result of their dealings with the corporation. In the context of public companies, shareholders enforce their preference for SWM through the market for corporate control124 and hedge fund activism.125

123 See id.; see also id. at 579.
124 Henry G. Manne, Mergers and the Market for Corporate Control, 73 J. POL. ECON. 110 (1965). Manne provides the following description of how the market for corporate control operates:

Briefly, the market for corporate control in our system operates in the following manner: if an existing corporation with publicly traded shares is poorly managed, holders of those shares will respond by selling. This will drive the price down to the point indicated by the quality of management which the corporation is receiving. As the price of securities of any corporation is thought to be low relative to the price that would be generated by more efficient managers, the stage is set for the critical functioning of the market for corporate control. Outsiders . . . will respond to the opportunity to make substantial capital gains (not necessarily in the tax sense) by buying control, managing the company efficiently, and then perhaps disposing of the shares. It is not necessary that they remain permanently to manage the business.
Why other stakeholders would support a Board and executive management targeting SWM is because all other parties that have contracted with the corporation must be paid off prior to the shareholders receiving a residual, if any. As stated by Henry Manne, the result of SWM being the corporate objective is an example of “pure positive economics” and should be accepted as such.

Like the principal-agent model of the corporation, a nexus of contracts model tells us to expect the corporate objective to be SWM. However, unlike the principal-agent model, it does not suggest that an exclusive focus on minimizing agency costs is the only way to achieve that objective. From a nexus of contracts approach, that determination should be up to the organizers of the corporation with input from all stakeholders. For example, the critical question of what should be the balance of power between the Board and shareholders needs to be resolved prior to beginning operations as a corporation. This, of course, is referred to as the private ordering of corporate governance arrangements and is assumed to be value-maximizing for all stakeholders, including shareholders. Again, the balance of authority is almost always tilted heavily toward the Board.

If one is to think of the corporation as a nexus of contracts, then one has also to include the role played by the courts in making sure those contracts are enforced. The courts’ fiduciary duties serve “as gap-filling devices for incomplete contracts between shareholders and firm managers.” Moreover, if fiduciary duties are crafted carefully to maximize shareholder value, this would mean that all stakeholders would benefit from their application. However, the three policy drivers already discussed, 1) protecting the Board from liability for honest mistakes of judgment, which also serves the purpose of allowing the Board “to maximize shareholder

---

125 An activist hedge fund works in a similar manner to the potential acquirer. The difference is that the activist hedge fund attempts to correct inefficiencies through its influence, not its control of the company. It acquires a significant but not controlling share in a company at a relatively low price with the expectation that existing inefficiencies will eventually be corrected through its efforts and the price will rise to reflect these enhanced efficiencies. In essence, hedge fund activism provides a corrective function similar to, but with less investment and more advocacy than, what is found in the market for corporate control. See Bernard S. Sharfman, *A Theory of Shareholder Activism and its Place in Corporate Law*, 82 TENN. L. REV. 791, 805-07 (2015). See also, Bernard S. Sharfman, *Activist Hedge Funds in a World of Board Independence: Creators or Destroyers of Long-Term Value?*, 2015 COLUM. BUS. L. REV. 813 (2016).

value in the long term by taking risks without the debilitating fear that they
will be held personally liable if the company experiences losses."129 2)
deference to private ordering as authorized by statutory law, and 3) the
courts’ understanding that the Board, not the courts, are in the best position
to make corporate decisions, severely restrain their desire to take an active
role in arbitrating disputes. These drivers strongly encourage the courts, as
a means to maximize shareholder value, to defer to the judgment of the
Board.

B. A Stakeholder Model of Corporate Governance

Those who signed off on the statement rejecting SWM as the legal
objective of Board decision making most likely believe in a stakeholder
model of the corporation. In such a model, there is no one stakeholder
holding the position of residual claimant. According to Henry Hansmann
and Reinier Kraakman, there are two types of stakeholder models.130 The
first model is called a “fiduciary model of the corporation.”131 In this
model, “the board of directors functions as a neutral coordinator of the
contributions and returns of all stakeholders in the firm.”132 This is in
contrast to another type of stakeholder model which they describe as a
“representative model of the corporation.”133 In this model, “two or more
stakeholder constituencies appoint representatives to the board of directors,
which then elaborates policies that maximize the joint welfare of all
stakeholders, subject to the bargaining leverage that each group brings to
the boardroom table.”134

From a normative perspective, a stakeholder model would allow,
without legal ramifications, a Board to consider multiple stakeholders, not
just stockholders, in its decision making. This would require the Rule to
protect the interests of multiple stakeholders, not just stockholders. As a
result, director conduct, as embodied in fiduciary duties, would not have
SWM as the objective of this conduct.

Perhaps the best known stakeholder model in corporate law literature is
the team production model of Margaret Blair and Lynn Stout.135 They use
their model, a fiduciary model, to argue that SWM is not the correct

135 Margaret M. Blair & Lynn A. Stout, A Team Production Theory of
objective\textsuperscript{136} of a public company\textsuperscript{137} and that this is already recognized by the courts.\textsuperscript{138}

Blair and Stout model the public company as a team of members who make firm-specific investments in the corporation with the goal of producing goods and services as a team ("team production"), with the board of directors serving as a "mediating hierarchy."\textsuperscript{139} In this role, board members are "mediating hierarchs whose job is to balance team members’ competing interests in a fashion that keeps everyone happy enough that the productive coalition stays together."\textsuperscript{140}

Any person or entity that makes a specialized investment that has little or no value outside the joint enterprise, a "firm-specific" investment, is a member of the team.\textsuperscript{141} The result is "that no one team member is a ‘principal’ who enjoys a right of control over the team,"\textsuperscript{142} Team members are primarily made up of executives, rank-and-file employees, and equity investors, but can also include researchers, creditors, the local community, marketers, and vendors who provide specialized products and services to the firm.\textsuperscript{143} Like equity investors, these stakeholders have made firm-specific investments and therefore must be considered residual interest holders, protected only by long-term implicit agreements (noncontractual and therefore not legally enforceable) that they enter into because they trust the board of directors to do its best to ensure they recoup their investments.\textsuperscript{144}

In their model, Blair and Stout suggest that “the business judgment Rule may help prevent coalition members (and especially stockholders) from using lawsuits as strategic devices to extract rents from the coalition. This is because the business judgment Rule works to ensure that directors can only be found liable for breach of the duty of care in circumstances where a finding of liability serves the collective interests of all the firm’s members."\textsuperscript{145} Moreover, Blair and Stout find support for their understanding in the Aronson formulation\textsuperscript{146} of the Rule since it omits express language stating that directors’ acting in “the best interests of the company”\textsuperscript{147} is only for the benefit of shareholders. While it is not known

why the Court did not clarify what “best interests” means in the context of the Rule, it should be noted that the *Aronson* formulation was applied in a derivative suit where shareholders were suing on behalf of the corporation. In that case, the Court may have simply felt there was no need to clarify what “best interests” means. Nevertheless, Blair and Stout argue that Rule works to support all team members, not just stockholders, when it is used to defend a legal challenge to a Board decision.

C. For the Benefit of Stockholders

While the stakeholder approach of Blair and Stout has much appeal, a much stronger argument can be made that the Board does have a legal obligation to maximize stockholder value and that the Rule, as applied, facilitates this legal requirement.

Surprisingly, this argument begins by noting that statutory corporate law is silent in regard to this objective. Instead, DGCL simply states that corporations can be formed “to conduct or promote any lawful business or purposes.”\(^\text{148}\) This silence in regard to the objective of the corporation has always been the approach of statutory corporate law. As a result, statutory corporate law must be understood as being concerned only with the “basic organizational design” of the corporation: its attributes as a legal entity, such as limited liability for stockholders, and how its default rules distribute decision making authority.\(^\text{149}\)

So, where does the idea of SWM being a legal requirement come from? In another surprise, the idea is derived from the courts applying its principals of equity when determining if a Board has breached its fiduciary duties. Typically, this will occur when the Rule is applied, but it also has equal relevance when the standard of review is the *Revlon* duty or the *Unocal* test. In essence, SWM is a creation of equity, not statutory law.

Under the Rule, fiduciary duties embody the type of conduct that is required of directors in order to avoid their decisions from coming under a fairness review, and this conduct requires the Board to act in the best interests of stockholders. This is a matter of positive law and was clearly spelled out in a series of statements by the Delaware Supreme Court in *NACEPF v. Gheewalla*,\(^\text{150}\) a case which answered the critical question of whether or not the Board owed fiduciary duties only to stockholders when the corporation entered the “zone of insolvency,” i.e., when it is financially distressed and may become insolvent.

\(^\text{148}\) [DELCODE ANN. tit. 8, § 101 (b).]

\(^\text{149}\) Jonathan R Macey, *Fiduciary Duties as Residual Claims: Obligations to Nonstockholder Constituencies from a Theory of the Firm Perspective*, 84 *CORNELL L. REV.* 1266, 1269 (1999) (“Indeed, the very justification for having different types of business organizations is to permit investors, entrepreneurs, and other participants in the corporate enterprise to select the basic organizational design they prefer from a menu of standard form contracts.”).

\(^\text{150}\) 930 A. 2d 92 (Del. 2007).
Gheewalla begins by explaining why only stockholders are given the right to bring derivative suits:

It is well settled that directors owe fiduciary duties to the corporation. When a corporation is solvent, those duties may be enforced by its stockholders, who have standing to bring derivative actions on behalf of the corporation because they are the ultimate beneficiaries of the corporation's growth and increased value.\(^{151}\)

In opposition to a stakeholder model of the corporation such as the team production model, this statement reflects the understanding that only stockholders hold residual claims to the cash flows of the corporation.

The Court then goes on to explain that the separation of ownership and control as provided by the default rules of statutory corporate law is the reason why fiduciary duties must be applied by the courts for the benefit of stockholders:

Delaware corporate law provides for a separation of control and ownership. The directors of Delaware corporations have the legal responsibility to manage the business of a corporation for the benefit of its stockholders owners. Accordingly, fiduciary duties are imposed upon the directors to regulate their conduct when they perform that function.\(^{152}\)

Moreover, the Court stated that even when a corporation is in the zone of insolvency, a Board still owes fiduciary duties to stockholders, not to creditors:

When a solvent corporation is navigating in the zone of insolvency, the focus for Delaware directors does not change: directors must continue to discharge their fiduciary duties to the corporation and its stockholders by exercising their business judgment in the best interests of the corporation for the benefit of its stockholder owners.\(^{153}\)

Here, we have the Court telling us exactly what the phrase “best interests of the corporation” should mean in the context of a Rule review; the protections of the Rule will apply if Board decisions are made for “the benefit of its stockholder owners.”

Vice Chancellor Laster, in *In re Trados Inc. Shareholder Litigation*,\(^{154}\) encapsulates this thinking in the following quote:

\(^{151}\) *Id.* at 101.  
\(^{152}\) *Id.*  
\(^{153}\) *Id.*  
\(^{154}\) *Id.*
It is, of course, accepted that a corporation may take steps, such as giving charitable contributions or paying higher wages, that do not maximize profits currently. They may do so, however, because such activities are rationalized as producing greater profits over the long-term. Decisions of this nature benefit the corporation as a whole, and by increasing the value of the corporation, the directors increase the share of value available for the residual claimants. Judicial opinions therefore often refer to directors owing fiduciary duties to the corporation and its shareholders. This formulation captures the foundational relationship in which directors owe duties to the corporation for the ultimate benefit of the entity's residual claimants. Nevertheless, stockholders' best interest must always, within legal limits, be the end. Other constituencies may be considered only instrumentally to advance that end.155

This statement and the statements from Gheewalla, are explicit endorsements of SWM and a direct repudiation of the idea that corporate law espouses a stakeholder model of the corporation. Almost 100 years ago this same understanding was espoused by the Michigan Supreme Court in the famous corporate law case of Dodge v. Ford Motor, Co.156 In Dodge, the court found that the Board abused its discretion in withholding a special dividend payment because its decision to do so was a result of purposely disregarding the interests of stockholders.157 Speaking in terms of the duties that the Board and Henry Ford owed to minority shareholders under corporate law,158 the court stated that the Board had a legal obligation to maximize the profits of the corporation for the benefit of stockholders:

A business corporation is organized and carried on primarily for the profit of the stockholders. The powers of the directors are to be employed for that end. The discretion of directors is to be exercised in the choice of means to attain that end, and does not extend to a change in the end itself, to the reduction of profits, or the nondistribution of profits among stockholders in order to devote them to other purposes.159

This legal obligation was a result of the court applying its power of equity, not implementing statutory corporate law. In sum, equity requires the

157 Id. at 684.
158 Id. (“There should be no confusion … of the duties which Mr. Ford conceives that he and the stockholders owe to the general public and the duties which in law he and his codirectors owe to protesting, minority stockholders.”)
159 Id. George Mocsary notes that this was not something that the Dodge court came up with out of the blue, but an affirmation of Michigan case law. See Mocsary, supra note 117, at __.
objective of the Rule to be SWM. Unfortunately, starting with the Aronson formulation of the Rule may cause this to be overlooked.

D. The Continued Denial of SWM

Even in the face of clear statements by the courts that SWM is a legal obligation of all Board decision making under corporate law, continued resistance to SWM should still be expected. I expect this for the following three reasons. First, as already mentioned, statutory corporate law is silent on SWM. This opens the door for those who believe in a stakeholder model of the corporation to argue that corporate law does indeed support such an approach in practice. Second, those who believe in a stakeholder model are not willing to accept SWM as being the objective of equitable principles; no matter how many times the courts state this to be their understanding. Perhaps this is just inconsistent with their long-held views on what equity means and therefore cannot be accepted as true. Yet, what could be fairer to shareholders and other stakeholders who contract with the corporation than to require Board decision making be targeted to SWM if all parties benefit from such an objective? Third, the indirect way the Rule is utilized to maximize shareholder value. This point requires further explanation.

When a court reviews a Board decision under the Rule, a decision will rarely lose the protections of the Rule just because the decision was sub-optimal in terms of SWM. In this context the protections will be lost only if it is clear that the decision was made without stockholder interests in mind, e.g. in Dodge where the court found the Board had abused its discretion when it withheld the annual payment of its special dividend.\footnote{This is consistent with what then Chancellor William Chandler said in the context of a rights plan (poison pill) as reviewed under the Unocal test: “Directors of a for-profit Delaware corporation cannot deploy a rights plan to defend a business strategy that openly eschews stockholder wealth maximization—at least not consistently with the directors' fiduciary duties under Delaware law.” eBay Domestic Holdings, Inc. v. Newmark, 16 A.3d 1, 35 (Del. Ch. 2010).}

However, this does not mean that the courts are not focused on SWM as the objective of a Board’s fiduciary duties; it just means that the courts must restrain themselves in making such a determination. Underlying this approach are the three policy drivers that have already been discussed, drivers that direct a court to forego a direct focus on SWM under the Rule. Instead, the courts focus on the conduct of the directors and evidence of taint surrounding the decision making process: fraud, self-dealing, lack of independence, etc. In essence, protecting the ability of Boards to make decisions without interference by shareholders and courts is the best way to ensure that SWM does occur.\footnote{Sharfman, Shareholder Wealth Maximization, supra note 75, at 399-412.} However, this lack of direct focus on SWM provides the opportunity for those so willing to interpret this approach as a court’s lack of interest in SWM, thereby helping make their

\[\text{33}\]
case that the court is endorsing a stakeholder approach to corporate law, not SWM.\footnote{Id. at 400 ("Preserving managerial discretion necessarily means that fiduciary duties will be weak and that courts will primarily refrain from determining whether a decision maximizes shareholder wealth. The problem is that this approach is counterintuitive and therefore subject to being misunderstood, especially by those who have been trained in the law and believe that accountability should always be the default rule.").}

E. Summary

While one can argue that corporate law encompasses a stakeholder model and that the Rule serves as evidence of this, a better argument is that the legal obligation of the Board is SWM and that the Rule serves to support that purpose. Case law clearly states that the Board is under a legal obligation to maximize shareholder wealth. The requirement of SWM enters into corporate law through a Board’s fiduciary duties, not statutory or law. In essence, SWM is an equitable concept. The implementation of SWM is indirect as all three of the major policy drivers that influence the Rule guide the courts to stay away from a focus on SWM unless the Rule has been rebutted, either by a breach in a Board’s fiduciary duties or the court has identified a taint that surrounds the decision making process.

CONCLUSION

In \textit{Bodel I}, one is immediately struck by the power of equity and how the court felt very justified in challenging statutory law, Section 4a of the DGCL (currently DGCL § 152\footnote{DELAWARE CODE ANN. tit. 8, § 152.}), with a fairness review of a Board decision even when the Board had statutory authority to act without restraint.\footnote{\textit{Bodell I}, 132 A. at 444.} The Court in \textit{Bodell II} took a more sophisticated approach, understanding that corporate law is all about the separation of ownership from control and how the interests of stockholders need to be in balance with the Board’s statutory authority. The policy driver behind this approach being that the Board should be allowed to run the company without the fear of constantly facing potential liability for honest mistakes of judgment. For this to occur, equity must be restrained. To implement such restraint the Court employed the Rule, the tool used to determine when a Board decision should stand without further review or when a fairness review is required and the full force of equity is to be applied. Here, the Court made clear that under the Rule the review of a board decision could not include fairness unless a court had made a finding that a fiduciary duty had been breached or some sort of taint had surrounded the decision (interestedness). To serve as this tool of restraint is the fundamental reason why the Rule must be retained in its present form. If
the courts were to lose this ability to restrain itself from imposing a fairness review, then Board decision making and shareholder wealth will suffer.

It should now be easy to see that the defining moment in the history of the Rule was not the famous case of *Smith v Van Gorkom*,\(^{165}\) where the Court made absolutely clear that director liability could result from an uninformed Board decision, but the much older case of *Bodell II*.\(^{166}\) This was the case, long before it could be said that the Rule was an abstention doctrine through its preclusion of duty of care claims, where the Rule, by precluding a fairness review of a Board decision unless a fiduciary duty had been breached or some sort of taint had surrounded the decision, was established as an abstention doctrine in the most fundamental way.
