DR. KING’S SPEECH: SURVEYING THE LANDSCAPE OF LAW AND JUSTICE IN THE SPEECHES, SERMONS, AND WRITINGS OF DR. MARTIN LUTHER KING JUNIOR

Carlton Waterhouse

Available at: https://works.bepress.com/carlton_waterhouse/8/
ABSTRACT

The belief that an essential relationship exists between law and justice has been recognized since the time of the ancient Greeks. In fact, the concept extends well beyond Western philosophy and jurisprudence. Distinct from other aspects of justice, the relationship between law and justice considers the nature of law and its dictates as well as the responsibility of citizens to obey it. Although Dr. Martin Luther King, Jr. lacked the developed legal analysis of jurisprudence scholars, he made a meaningful contribution to the intellectual discourse of his time by forcing the discussion on the broader society and centering it on racial segregation—a critical issue of his day. This article places Dr. King’s views of law and justice within a historic and contemporary context by exploring the theory of law and justice and how it shaped and inspired Dr. King’s leadership of the Civil Rights Movement. The article begins by addressing a consideration of the special relationship between “law and justice.” It then explores the three philosophical commitments that formed Dr. King’s vision of law and justice: America’s democratic principles, Personalism, and Natural Law. Lastly, this article considers Dr. King’s vision in comparison to two schools of critical jurisprudence: Critical Legal Studies and Critical Race Theory. Dr. King saw clear contradictions of the legal system that violated the demands of law and justice. This article identifies and explores the valuable insights provided by Dr. King’s vision of law and justice while still pointing out the oversights and contradictions present in it.
“The arc of the moral universe is long but it bends toward justice.”

-Martin Luther King, Jr.

INTRODUCTION

From whence springs the meaning of justice? Upon what foundation rests its cornerstone? These questions and more pervade recent discourses about justice.

Likewise with increasing frequency, legal scholars and philosophers debate the viability
of justice arguments due to fundamental disagreements about the nature of the world and the societies in which we live.²

Without the benefit of a legal education or a survey of legal philosophy, Martin Luther King, Jr. weighed into a historic debate in legal scholarship regarding the nature of law and the responsibility of citizens to obey it.³ Is law simply the pronouncement of authority with the power to sanction? Is it the historically contingent legislation of democratic regimes? Is it divine directive revealed to prophets and the faithful and binding upon all? Or is it a fundamental ordering of the universe made clear to all through unimpeded reason? Through sermons, addresses, books, and other writings, King developed and presented his views regarding law and justice.⁴ Although lacking the developed legal analysis of jurisprudential scholars, King made a meaningful contribution to jurisprudential discourse of his time by opening the discourse to the broader society and centering it on a critical issue of his day.⁵

Despite his lack of legal training, King benefited from an excellent education and the unique ability to connect with the black masses of the south, suffering the hardships of segregation, and northern whites committed to the ideals of liberalism.⁶ Given the time and interest, King very well could have made a more meaningful contribution to our understanding of law and justice. While alive, King was not afforded the same luxuries

⁶ Id. at 44.
of abstract contemplation taken for granted by many ancient and contemporary philosophers and his ruminations were ultimately cut short by a sniper’s bullet. King’s writings and addresses, nonetheless, reveal a man genuinely concerned with the theological and philosophical questions of his day. Critical scholarship endeavors to recognize and identify the insights and inconsistencies, limitations and lucidity in the words and ideas of men and women like Dr. King whose lives like rudders changed the course of history. Through the engagement we should come to better understand them and ourselves.

This article strives to identify, understand, and critically evaluate King’s views on law and justice. Part I of the article begins with a brief consideration of the relationship between law and justice. After considering some background on the subject, the article explores how America’s democratic principles, Natural Law, and Personalism shaped King’s understanding and articulations on the subject. Part II of the article examines Dr. King’s proclaimed views in light of the insights of two schools of critical jurisprudence: Critical Legal Studies and Critical Race Theory. The analysis concludes with a reflection on the poignancy of the challenges to King’s vision of law and justice in light of historical developments of the last forty years.

LAW AND JUSTICE

---

7 Id. at 623-634.
8 See generally, Garrow, supra note 5.
9 There is, of course, disagreement over the merit of claims raised by some critical legal scholarship questioning the integrity of American jurisprudence. See RONALD DWORKIN, LAW’S EMPIRE 271-275 (1986) (addressing challenges raised by critical legal scholarship to the integrity of the American legal system).
10 Id.
The intersection of law and justice has a unique form distinct from the many other
types of justice commonly spoken about.\footnote{Aristotle, Nichomachean Ethic Book 5, paragraph 2, http://classics.mit.edu/ Aristotle/nicomachaen .5.v.html .} Broader than restorative justice, distributive
justice, retributive justice, compensatory justice, and procedural justice, the intersection
of law and justice incorporates and/or facilitate one or more of the above aspects of
justice.\footnote{Julian Lamont & Christi Favor, Distributive Justice, STANFORD ENCYCLOPEDIA OF PHILOSOPHY, http://plato.stanford.edu/entries/justice-distributive/. See Oscar Ross Ewing, The New Legal Justice, 24 Yale L. J. 441(1915). (For a thoughtful consideration of the concept and its development in Western thought.)} However, unlike the above concepts, the intersection of law and justice or the
“legal delivery of justice” depends on the juridical system of a nation or a society.
Ideally, law should serve the ends of justice.\footnote{The substance of the ideal that should be used to define the relationship between law and justice is the primary subject of contemporary jurisprudence. Levit, Delgado & Hayman, supra note 2.} In his speeches and writings, Dr. King
made the “justness” of laws and the legal system itself of primary importance.

As social system, law is broad reaching. Laws govern and structure the
relationships individuals maintain with one another as well as the relationships that
individuals have with groups. Further, law establishes the relationship that individuals
and groups have with the nation or state. Laws range from legislative efforts to prescribe
the boundaries of commercial and other relationships to a person’s ability to be
compensated by another for some wrongful injury that they suffer.\footnote{Aristotle, supra note 11, paragraph 7.} In the United States, law dictates and regulates the creation, operation, and dissolution of marriage. Law
determines suitable parties, the duration of the relationship, and even the boundaries of
acceptable conduct. Over the course of American history, in particular states, African
Americans and other “non-whites” were legally prohibited from marriage, cohabitation or
sexual relationships with whites; state anti-miscegenation laws even made such acts felony offenses.

1. Justice and Legal Equality

One basic requirement of a law that corresponds with justice is “equality before the law” is expressed by the Greek philosopher Aristotle in his writings on justice:

For it makes no difference whether a good man has defrauded a bad man or a bad man a good one, nor whether it is a good or a bad man that has committed adultery; the law looks only to the distinctive character of the injury, and treats the parties as equal, if one is in the wrong and the other is being wronged, and if one inflicted injury and the other has received it.15

In the passage, Aristotle makes reference to what he calls rectificatory justice.16 This term relates to individuals’ treatment by a judge in a legal dispute. As a fundamental matter, Aristotle maintains that justice requires equality before the law for it is only by looking at parties equally that the law resolves disputes with the impartiality required by justice.17 As an example, Aristotle asserts that the facts at issue are tantamount and not the character or the reputation of the individuals.18 A good man who has defrauded a bad man is equally liable as a matter of justice as both are equally liable for any crime that they commit.19 In Aristotle’s view, the actions of individuals should govern the outcome of legal disputes rather than their personal characteristics.20

This notion of equality before the law has threads through Western philosophy and jurisprudence and blossoms in the Declaration of Independence and the United States

15 Aristotle, supra note 11, paragraph 4 (B).

Constitution. The Declaration of Independence points to the concept in considering the rights of all men. “We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.” With regard to white men, from the time of the founding of the nation the principle was established. As a matter of law, cases and controversies, as well as the rights of citizens were to be adjudicated and adjudged without respect of persons. However, the extension of equality before the law to blacks was not widely recognized at the time of the Declaration’s signing. In the wake of the revolutionary war that soon followed, many northern states abolished the enslavement of blacks and removed some legal distinctions based on race as contrary to the principles underlying American democracy. Despite these strides, most states failed to extend full equality to blacks before the law. When the question of the legal equality of blacks came before the Supreme Court in Dred Scott v. Sanford, the highest court of the land addressed whether blacks were entitled to rights equal to those of whites. Writing for the majority of the justices, Chief Justice Taney resolved the question writing:

The question before us is whether the class of persons described in the plea in abatement [enslaved and free blacks] compose a portion of this people, and are constituent members of this sovereignty? We think they are not, and that they are not included, and were not intended to be

included, under the word "citizens" in the Constitution, and can therefore claim none of the rights and privileges which that instrument provides for and secures to citizens of the United States.

On the contrary, they were at that time considered as a subordinate and inferior class of beings who had been subjugated by the dominant race, and, whether emancipated or not, yet remained subject to their authority, and had no rights or privileges but such as those who held the power and the Government might choose to grant them.  

In the decision, the majority rules that a formerly enslaved black man who gained his freedom through residence in a state that prohibited slavery could not bring suit in federal court as a citizen of the United States when he was re-enslaved by his former master after returning to the antebellum south. The Court makes the decision based largely on their understanding that neither the Declaration of Independence nor the Constitution contemplated the inclusion of enslaved or free blacks as those who were endowed with rights recognized and established by those documents.

Roughly eight decades after the Declaration of Independence was signed, the Fourteenth Amendment of the United States Constitution spoke directly to the issue. Stating that all persons born or naturalized in the United States and subject to its jurisdiction shall be citizens and that no state shall deny to any person within its jurisdiction the equal protection of the laws, the Amendment directly overruled the Supreme Court’s decision in *Dred Scott* and established in principle that all men were entitled to equality before the law. However, following a brief period of reconstruction,

31Id.
32Speaking of the prevailing opinion at the time the Declaration of Independence was signed, Taney wrote, They had for more than a century before been regarded as beings of an inferior order, and altogether unfit to associate with the white race either in social or political relations, and so far inferior that they had no rights which the white man was bound to respect, and that the negro might justly and lawfully be reduced to slavery for his benefit.
33U.S. Const. amend. XIV.
34Id.
in the south, equal protection before the law was a dead letter principle as legislatures and judges abridged the rights of blacks with impunity. Through the use of state and local laws designed to maintain a subordinate status for blacks, southern white legislatures returned blacks to a degraded status using Jim Crow laws that prohibited blacks from free access to education, political participation, employment, and public accommodations.

2. Justice and Racial Inequality

As a historical matter, equality before the law evaded blacks across the generations. From the time of the American colonies to the birth of Dr. King, the relationship between law and justice for most Americans was different than the relationship experienced by blacks. In the early colonies and in the antebellum south, blacks both bound and free were prohibited from using the legal procedures available to whites including the basic right to testify against a white man or women in court. At the onset of the new deal, blacks were legally denied the benefits of federal programs made available to whites. In the post-reconstruction south, blacks were legally bound out to whites after being arrested on spurious charges. Through most of Dr. King’s life, Jim Crow laws denied blacks equal access to jobs, housing, education, and medical care.

42 See, supra note 35.
As a result, the American legal system embodied a substantial contradiction leading up to the Civil Rights Movement: grand ideals of law and justice that promised equality before the law and the reality of the biased creation and implementation of laws towards blacks and other nonwhites.\textsuperscript{43} In 1954, the dawn following the long night of America’s legal contradiction began to break when the Supreme Court ruled in \textit{Brown v. the Board of Education} that laws requiring segregation in education were unconstitutional.\textsuperscript{44} Although the Court had made earlier decisions that undercut segregation practices in more limited situations,\textsuperscript{45} the wholesale rejection of segregation in the public school system was a monumental occurrence with a significant symbolic and practical effect. For King, the unanimous decision suggested that the long deferred hope of legal equality might soon be realized.\textsuperscript{46} The law and justice promised in the Declaration of Independence and the United States Constitution was soon to come as King saw it, though it would require much prodding and agitation.\textsuperscript{47}

Rather than a clear uncontested meaning as it might be inferred by the Aristotelian formulation, in practice the concept of equality before the law struggled to gain acceptance as something widely available across preexisting social barriers such as race.\textsuperscript{48}

PHILOSOPHICAL COMMITMENTS OF DR. KING TO LAW AND JUSTICE

1. \textbf{Personalism, Law, and Justice}

\textsuperscript{43} Green, \textit{supra} note 38.
\textsuperscript{44} \textit{Brown v. the Board of Education}, 347 U.S. 483 (1954).

\textsuperscript{46} King, \textit{supra} note 4.
\textsuperscript{47} \textit{Id.}
\textsuperscript{48} \textsc{Martin Luther King, Jr., Stride Toward Freedom} 31 (San Francisco: HarperCollins 1958)
King made clear that the basic philosophical position guiding his actions was rooted in a personal idealism. He wrote, “Personalism’s insistence that only personality—finite and infinite—is ultimately real strengthened me in two convictions: it gave me metaphysical and philosophical grounding for the idea of a personal God, and it gave me a metaphysical basis for the worth of all human personality.” King applied these concepts in forming his views on what justice required. He regarded racial discrimination and segregation as evils in the society that were manifestly unjust. On the subject he said, “Segregation stands diametrically opposed to the principle of the sacredness of human personality. It debases personality.” This debasement, in King’s view, took on multiple dimensions harming both blacks and whites in the process. For blacks, King felt that discrimination and segregation treated them as means to an end and not ends in and of themselves violating Immanuel Kant’s Categorical Imperative that “all men must be treated as ends and never as mere means.” The southerners’ view of black’s as property or “animated tools” cemented through Jim Crow laws depersonalized blacks, in King’s view, and desecrated the sacredness of their humanity.

Segregation and the racial discrimination it legitimized also afflicted blacks with “social leprosy” that inflicted psychological as well as physical scars, King contended. Elaborating, he explained that the scars flowed from “suppressed fears and resentments,
and the expressed anxieties and sensitivities that make each day of life a turmoil.”

Even whites suffered from the reign of Jim Crow, in King’s estimation. King felt the presumed inferiority and inequality of blacks maintained through Jim Crow segregation abused the image of God in them and proportionately decreased the image of God in those whites who inflicted the abuse.

Because segregation was based in legal code as much as custom and practice, King saw the Jim Crow laws damage to the personhood of whites and blacks as direct violations of law and justice. The affront to personality caused by Jim Crow laws served as significant evidence to King that the laws were unjust and dictated civil disobedience as an ethical response. “Any law that uplifts human personality is just. Any law that degrades human personality is unjust. All segregation statutes are unjust because segregation distorts the soul and damages the personality.” As such, the first concern of law and justice for King is the laws effect on human personality.

2. Natural Law and Justice

When Dr. King raised issues of moral justice he drew upon an ideal rooted in the classical western natural law tradition. This tradition, grown from the writings of Greek philosophers and the Christian scholars that influenced as much as the sacred texts of

62 Id.
63 King, supra note 4, at 293.
Judaism and Christianity, viewed justice as part of the natural order of the universe created by God and comprehended by human beings through their ability to reason.65

In this tradition, the laws of society are secondary to a higher law that establishes the right and the good.66 From this higher law, human beings derive the norms of behavior toward each other that govern their lives together.67 What Dr. King called the human law, within the tradition, represented the efforts of different societies to enshrine the higher law in their particular legal systems.68 This “positive law” was subject to the higher or natural law in moral terms.69 Accordingly, a society’s legal pronouncements could be viewed as good or bad on moral as well as legal and pragmatic grounds.

On legal grounds, a law could be good or bad based on its conformity with procedural requirements established by preexisting legal requirements governing its promulgation or pronouncement.70 A law properly promulgated by a legislative body or pronounced by a judge in light of preexisting legal requirements would be good law.71 A law issued outside of established procedural obligations or binding legal requirements would be a bad law.72

In a prudential or a pragmatic sense, a law could be good or bad based on its expected or actual effects.73 A law that positively affects a society through its application or from its mere promulgation would be a good law while a law that negatively affects

73 See Fuller, supra note 70, at 153-57 for a contrary view.
the society would be a bad law. Of course, consequences cannot always be seen in advance, so as a pragmatic matter laws that are good in practice actually accomplish desirable ends and should be distinguished from those that merely portend certain results. A law that is universally endorsed initially may be universally rejected, later, because of an unanticipated consequence while a law that enjoys little support in its development may be widely praised in the future because of some foreseeable but unanticipated benefit.\textsuperscript{74} In these instances, reason may not dictate any particular position regarding a law because of its lack of apparent moral content; however, the effect of the law may have moral significance that places it within or beyond the bounds of natural law. Take for example a law establishing the uniforms of guards. If the uniform included a feather from the favored bird of the nation that inadvertently caused a debilitating and ultimately deadly rash in all of the guards the continued application of the law requiring the use of the feather would take on moral significance and be judged in turn in accordance with the natural law. Accordingly, in both a pragmatic and a moral sense this would be a bad law because it would prevent guards from serving and because it would unintentionally deprive them of their lives without good reason.

Natural law then establishes a moral norm that can be used to judge the moral character of a nation’s laws.\textsuperscript{75} A society’s laws may conform or violate the natural law in their formulation, their implementation, or their outcome.\textsuperscript{76} A law that conforms to the higher moral or natural law would then be a good law while a law that conflicts with the

\textsuperscript{74} Here I speak of laws that lack apparent moral significance in their formulation but have outcomes that take on moral importance.

\textsuperscript{75} Aquinas. Summa Theological, Question 95: Human law, Article 2, \url{http://www.newadvent.org/summa/2095.htm};

\textsuperscript{76} Dyson, \textit{supra} note 65, at 143.
moral law would be a bad law.\textsuperscript{77} Under this approach, knowledge of morality or natural law is accessible to human beings through their ability to reason.\textsuperscript{78} However, this classic or traditional understanding of natural law places it outside the bounds of human control or subjectivity.\textsuperscript{79} Accordingly, the natural law is not bound by culture, nationality, or time though knowledge and awareness of it may vary.\textsuperscript{80}

Saint Thomas Aquinas offered a systematic treatment of natural law referenced by King in the Letter from the Birmingham City Jail.\textsuperscript{81} King wrote, “To put it in terms of Saint Thomas Aquinas, an unjust law is a human law that is not rooted in eternal and natural law.”\textsuperscript{82} The system developed by Aquinas places all laws within a structured hierarchy that begins with God in the creation of the world through divine wisdom.\textsuperscript{83} This divine wisdom manifests the eternal law that permeates perfectly through the natural law and imperfectly in human laws.\textsuperscript{84} In the natural law, the eternal law can be better known through reason.\textsuperscript{85} Reason, commonly distributed to humanity, allows the natural law in its general precepts to be known to all while its conclusions in particular circumstances may be unclear because of bad habits or dispositions.\textsuperscript{86} When human laws violate the dictates of the natural law then they are unjust laws that do not accord with reason or the eternal law.\textsuperscript{87} Despite the close connections within the system, Aquinas allows room for variation in positive human law dependent upon the society and

\end{footnotes}
circumstances.\textsuperscript{88} These variations do not necessarily violate natural or eternal law as long as they regard matters for which natural law and reason dictate no particular action.\textsuperscript{89}

For Dr. King, the law of segregation was a corrupt human law that was unjust in its implementation, its consequences, and its formulation.\textsuperscript{90} Dr. King based his view on his understanding of moral law that held all humans as equal beings worthy of equal regard and consideration that afforded them certain natural rights.\textsuperscript{91}

In the Letter from the Birmingham Jail, King provided the most detailed elaboration of his views on law and justice.\textsuperscript{92} Written in response to a letter printed in the Birmingham newspaper by eight prominent local clergy that criticized civil rights protests in Birmingham, the letter provided King the opportunity to defend the civil rights movement from the attacks of critics both locally and nationally.\textsuperscript{93} To accomplish this, King placed the movement’s goals and tactics in the broader context of natural law and justice.\textsuperscript{94} I begin with a similar though more abbreviated explanation of his views on law and justice from his address to the Annual Meeting of the Fellowship of the Concerned in 1961.\textsuperscript{95} In this address, King defended the sit-ins and freedom rides of students fighting for civil rights to this interracial group that included white liberal allies who preferred a more gradual approach to the civil disobedience of the students.\textsuperscript{96} To counter the claims that it was inconsistent for the students and other civil rights activists to call for compliance with the \textit{Brown v. Board of Education} decision while violating the

\textsuperscript{95} \textit{Id.} at .43.  
\textsuperscript{96} \textit{Id.} at 47.
segregation laws, King explained what he saw as a fundamental distinction between the two. He explained:

[The students recognize that there are two types of laws. There are just laws and unjust laws. And they would be the first to say obey the just laws, they would be the first to say that men and women have a moral obligation to obey just and right laws. And they would go on to say that we must see that there are unjust laws . . . . what is the difference between a just and unjust law? Well, a just law is a law that squares with a moral law. It is a law that squares with that which is right, so any law that uplifts human personality is a just law. Whereas that law which is out of harmony with the moral is a law that does not square with the moral law of the universe.]

In King’s view, the moral law is preeminent and accords with a divine law established by God. Likewise, King saw God establishing certain rights for individuals in their relationship with others. These he called God given rights; in agreement with the statement in the Declaration of Independence that “all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.” King connected natural law with these and other pronouncements by the founding fathers and Lincoln. King saw a direct connection between the rights and freedoms that people enjoy and the dictates of natural law.

In King’s pronouncements, the natural law establishes rigid categories that demand clear responses. An unjust law like segregation demands rejection and non
cooperation as part of an unjust system.\textsuperscript{104} Straightforwardly, King states that just laws should be obeyed and unjust laws should not.\textsuperscript{105} This, King points out, flows from a duty not to cooperate with evil.\textsuperscript{106}

To explain how to decide the justness of a law King appealed to the natural law as a standard; expounding that a law that conforms to morality is “right.”\textsuperscript{107} To assess a law’s morality, King initially appealed to its effect on human personality.\textsuperscript{108} Laws that uphold personhood are moral and therefore just and right while those that “degrade personhood” are immoral and unjust.\textsuperscript{109} While King expanded the category of unjust laws later in the address, based on the process of their development, he did not explain how laws uphold or degrade personhood.\textsuperscript{110}

To clarify his meaning in more secular and practical terms, King said, “an unjust law is a code that the majority inflicts upon the minority, which that minority had no part in enacting or creating, because that minority had no right to vote . . . ”\textsuperscript{111} This undemocratic process of legislat ing against minority interests, King maintained, renders the resulting law unjust.\textsuperscript{112} This relates back to the discussion of laws legitimacy above based on its promulgation in accordance with preexisting legal procedures and requirements. Although King did not maintain that states that denied blacks the right to
vote were breaking state or federal laws, he was arguing that they violated the principles of democracy underlying the American legal system.\textsuperscript{113}

These violations of what King understood as the spirit of the law evidenced in the Declaration of Independence, the Constitution, and the Emancipation Proclamation represented miscarriages of justice discernable in terms that King believed natural law skeptics and atheists alike could equally appreciate.\textsuperscript{114} “An unjust law is a code that a majority inflicts on a minority that is not binding on itself. This is difference made legal. On the other hand a just law is a code that a majority compels a minority to follow that it is willing to follow itself,” King explained.\textsuperscript{115} His point was simple, segregation laws contradicted basic notions of fairness.\textsuperscript{116} They were passed in states that denied the black residents that they governed the right to vote on the legislators who would drafted them or the governors who signed them.\textsuperscript{117} Furthermore, they were applied hypocritically to place limitations on the black minority that the white majority was unwilling to follow.\textsuperscript{118}

3. American Democracy, Law and Justice

A critical component of King’s view of law and justice grew from America’s democratic ideology.\textsuperscript{119} Hearkening back to the Emancipation Proclamation, the Declaration of Independence, and the democratic notions underlying the U.S. Constitution, King described law and justice as the fulfillment and embodiment of basic

\textsuperscript{113} Id.
\textsuperscript{114} Id at 292-302.

principles articulated by the founders of the nation and extended by Lincoln in the
Emancipation Proclamation:

When the architects of our country write the magnificent words of the
Constitution and the Declaration of Independence, they were signing a
promissory note to which every American was to fall heir. This note was
the promise that all men, yes, black men as well as white men, would be
guaranteed the unalienable rights of life, liberty, and the pursuit of
happiness . . . . It is obvious today that America has defaulted on this
promissory note in so far as her citizens of color are concerned. Instead of
honoring this sacred obligation, America has given the Negro people a bad
check; a check which has come back marked “insufficient funds.” We
refuse to believe that there are insufficient funds in the great vaults of
opportunity of this nation. And so we have come to cash this check, a
check that will give us upon demand the riches of freedom and the
security of justice.

This passage, from King’s keynote address for the March on Washington, highlights his
consistent description of a chief goal of the civil rights movement as the fulfillment of the
American creed provided in Declaration of Independence that “all men are created
equal.” King understood that, despite the promise of the creed, the reality for blacks was
legal and social inequality. Beginning the same speech with a reference to the “beacon
light of hope” that the Emancipation proclamation brought to “millions of Negro slaves
who had been seared in the flames of withering injustice,” King articulated the
inconsistency in the promises of equality and freedom and the lived experiences of black
people. “But one hundred years later, [from the issuance of the Emancipation
Proclamation] the Negro still is not free; one hundred years later the life of the Negro is

120 These principles also shared King’s commitment to the sacredness of human personality. In an address
to a church conference in 1963 King explained, “This idea of the dignity and worth of human personality is
expressed eloquently and unequivocally in the Declaration of Independence . . . . Never has a sociopolitical
document proclaimed more profoundly and eloquently the sacredness of human personality.” Id. at119.

122 Id.
still crippled by the manacles of segregation and the chains of discrimination,” he contended.\footnote{Id.}

This contradiction or tension fueled King’s understanding of and approach to the issue of law and justice.\footnote{I have a Dream (Aug. 28, 1963) in MARTIN LUTHER KING, JR., A TESTAMENT OF HOPE: THE ESSENTIAL WRITINGS AND SPEECHES OF MARTIN LUTHER KING, JR. at 217-18 (James M. Washington ed., New York: HarperCollins 1991).} Approaching the matter as an activists and unwilling victim rather than as a detached scholar weighing abstract ideas of political and legal philosophy, King saw racial discrimination and segregation as evils that directly contravened the great principles of the nation.\footnote{King, supra note 4, at 119.} Quoting a lecture by Frederick Douglas on the Constitution, he noted that its language speaks unreservedly of “We the people.”\footnote{Id.} Without qualification as to race or class or other status, King like Douglas saw a claim in the Constitution towards an undifferentiated humanity that necessarily includes blacks as members of humanity who should be included in “the benefits for which the Constitution of America was ordained and established.”\footnote{Id.} The rightful extension of the benefits of the Constitution and the rights described in the Declaration of Independence represented the embodiment of law and justice to King: the rightful end to a long night of injustice.\footnote{Id. at 197.} The Supreme Court had instilled hope in King and others in 1954 with the landmark decision in \textit{Brown v. Board of Education}.\footnote{Brown v. the Board of Education, 347 U.S. 483 (1954).} Speaking of Brown, King remarked “It came as a reaffirmation of the good old American doctrine of freedom and equality for all people.”\footnote{King supra note 4, at 197.} King saw, in this decision undermining the scourge of legally sanctioned segregation that had been entrenched in \textit{Plessy v. Ferguson}, a foreshadowing of the day
when law and justice promised by the founding fathers would become a reality for their black progeny.\footnote{131 Id.}

In the Letter from the Birmingham Jail, King connected his defense of civil disobedience in Birmingham with the prevalence of unjust laws that compel disobedience.\footnote{132 Id. at .289.} To help his readers know just from unjust laws, King expanded on his discussion of Personalism and natural law with concrete examples rooted in the principles of American democracy:

\begin{quote}
[A]n unjust code is a code inflicted upon a minority which that minority had no part in enacting or creating because they did not have the unhampered right to vote. Who can say that the legislature of Alabama which set up the segregation laws was democratically elected? Throughout the state of Alabama all types of conniving methods are used to prevent Negroes from becoming registered to vote despite the fact that the Negro constitutes a majority of the population. Can any law set up in such a state be considered democratically structured?\footnote{133 Id. at 294.}
\end{quote}

Alabama, the south and the entire nation’s failure to ensure the right to vote for millions of African Americans served as one of the principle injustices for which King sought a legal remedy.\footnote{134 Id. at .197.} He described this particular Jim Crow practice, as “a tragic betrayal of the highest mandates of our democratic tradition” and as “democracy turned upside down.”\footnote{135 Id.}

Law and justice for King then was the end of Jim Crow segregation.\footnote{136 Id. at 47; see also, Id. at 293-94.} On three separate but consistent grounds, King saw the end of America’s legal contradiction that promised freedom and equality for all, but provided bondage and racial inequality for
blacks as a fundamental requirement of law and justice. Segregations laws were an affront to human personality and dignity, an immoral contravention of the natural law, and inconsistent with America’s democratic principles. Only when they ended could law and justice begin.

In the remainder of this article, I consider how King’s views compare to two contemporary legal discourses: critical legal studies and critical race theory. I will attempt to buttress the optimism of King that grounded his views above with later statements from him following the passage of the Civil Rights Act of 1964 and his visit to Watts and lackluster campaign in Chicago. These later statements focus more on the substantial reform required to meet the needs of black northerners and southerners trapped in ghettos and rural poverty. It was during this period that King came to appreciate, more fully, that legal rights alone could not secure the material wellbeing of the masses of blacks that racial justice demanded.

**DR. KING AND CONTEMPORARY LEGAL DISCOURSE**

1. **Critical Legal Studies, Law, and Justice**

Contemporary scholars reject many of the foundational beliefs under girding King’s philosophy. The most divergent view in today’s scholarship comes from the adherents of Critical Legal Studies. The Critical Legal Studies (CLS) movement grew out of scholarly critiques of legal and political thought in the late 1970s that challenged philosophical claims that the existing legal system represented an objective, inevitable,

and fair system.\textsuperscript{141} Many scholars espousing this view contended that the American legal system advances a liberal capitalist ideology that uses a hierarchical vision of the world built on patterns of domination and subordination that appear fixed immutable and proper.\textsuperscript{142} A second theme of the CLS scholarship was the indeterminate nature of legal rules and reasoning.\textsuperscript{143} Scholars advancing this view critiqued claims that legal rules necessitated particular judgments in legal cases; instead they maintained that law failed to provide judges with objective criteria that necessitated particular rulings.\textsuperscript{144} The prevalence of competing claims and considerations in cases dictates that judges bring subjective value judgments into play in reaching their conclusions, CLS scholars argued.\textsuperscript{145} The chief development of this theme from CLS is a critique of rights discourse as both a façade that hides the actual needs and relationships paramount to desired outcomes and an ephemeral signifier devoid of the content necessary to ensure or determine legal results.\textsuperscript{146} This question of the importance or relevance of rights will then serve as the central theme of my analysis of King’s views relative to these more recent jurisprudential movements. Namely, how does King’s conception of law and justice as the realization of the natural rights provided by God that uphold human personality in accordance with natural law as promised by the Declaration of Independence and the Constitution withstand the challenge made by CLS scholars? 

In an article entitled “An Essay on Rights” Mark Tushnet provides a seminal CLS critique of rights discourse in which he elaborates the four elements of his critical

\textsuperscript{146} Id.
assessment. They are instability, indeterminacy, abstraction, and impediment.\textsuperscript{147} Rights are unstable: as social circumstances change so does the meaning and availability of rights.\textsuperscript{148} Rights produce indeterminate results: the existence or non-existence of one or more rights fails to necessitate any particular legal outcome.\textsuperscript{149} The rights concept is an abstraction from reality: the notion of rights substitutes an empty abstraction for actual experiences that should be valued.\textsuperscript{150} Rights impede social change: rights discussions function as a formidable obstacle to the changes needed to restructure society in accordance with a progressive agenda.\textsuperscript{151}

After a brief elaboration of the first two elements of Tushnet’s assessment, I evaluate the strength of their merits relative to Dr. King’s view of law and justice. I begin with his initial claim that rights suffer from instability.\textsuperscript{152} As abstract principles, rights have no coherent meaning outside the context of particular situations and societal understandings.\textsuperscript{153} Tushnet explains, “The conditions of the society define exactly what kind of rights-talk makes sense, and the sort of rights-talk that makes sense in turn defines what the society is.”\textsuperscript{154} In other words, rights depend on the historical contingency of particular societies and only have meaning in light of those contingencies.\textsuperscript{155} In turn, the contingencies themselves determine the nature of the society and the social meanings that govern relationships.\textsuperscript{156}

\textsuperscript{148} Id.
\textsuperscript{149} Id.
\textsuperscript{150} Id.
\textsuperscript{151} Id.
\textsuperscript{152} Id. at 1370

\textsuperscript{154} Id.
\textsuperscript{155} Id. at 1370-71.
\textsuperscript{156} Id.
Because of their instability, the successful recognition of rights one day may completely lose its value the next day or some point in the future under changed circumstances.\textsuperscript{158}

Applying this assessment to King’s view of law and justice reveals the historic contingency of King’s argument. The argument proffered by King and Frederick Douglas that blacks in America fell within the protections of the Constitution because they were “people” only makes sense in light of a putative understanding within society that blacks were in fact “people.”\textsuperscript{159} The fact that some whites and most blacks held the view when the document was signed could not establish the societal meaning of the term nor legal rights there from.\textsuperscript{160} This developed across the history of the nation out of many contingent occurrences.\textsuperscript{161} Likewise, the Declaration of Independence’s claim that “all Men” were endowed by their Creator with unalienable rights should be considered in light of the predominant view of the time that black males could not become “Men.”\textsuperscript{162}

Of course, this is the argument that Justice Taney made in \textit{Dred Scott} that infuriated some and placated others.\textsuperscript{163} Its relevance to my argument is that the Civil War seems to have been fought in part to determine which social meaning of “people” and “man” would prevail. The outcome of the war and the ensuing occupation of the South partially settled the question for blacks in the north and temporarily settled the question for blacks in the

\textsuperscript{157} \textit{Id.}
\textsuperscript{158} Here we might consider how the meaning of many Constitutional rights changed in the wake of the terrorist attacks on the World trade Center Towers and the Pentagon on September 11, 2001. New legal interpretations employed by the federal government in light of the perceived risk of additional attacks affected a host of Constitutional rights including a right to counsel, a right to a speedy trial, and a right to confront accusers, among others.
\textsuperscript{159} For a contrary view, consider Justice Taney’s opinion in \textit{Dred Scott v. Sanford.}
\textsuperscript{160} Tushnet, \textit{supra} note 147, at 1369-71.
\textsuperscript{161} For a consideration on relevance of Declaration of Independence and African American, see Higginbotham, \textit{supra} note 26, at 371-89.
\textsuperscript{162} United States Declaration of Independence, July 4, 1976.
\textsuperscript{163} \textit{Dred}, 60 U.S. 393.
While northern troops were present, the right to vote guaranteed to black men in the Fifteenth Amendment of the Constitution meant that they could freely participate in elections and even hold office. Following the withdrawal of the troops from the South, however, the right to vote for black men in the south had a completely different set of meanings that lead to seven decades of disenfranchisement.

In addition to a challenge to the stability of rights across time, Tushnet also proffers a challenge to what he calls the technical indeterminacy of rights. Technical indeterminancy addresses the fact that in individual cases judges use various reasons to determine rights existence, extent, limitations, significance, and benefit. Because of this myriad of considerations the existence of a right does not compel any particular outcome in a given case. As judges balance rights against each other, weigh the affected interests, and construct the background situation, a host of subjective valuations obscure any necessary outcomes. The risk of focusing on rights based arguments Tushnet explains is basic, “Because rights-talk is indeterminate, it can provide only momentary advantages in ongoing political struggles.” As we consider the four decades since the passage of the civil rights statutes of the 1960s, we can best appreciate the concern about indeterminacy and its consequence. Title VII of the civil rights act of 1964 prohibits discrimination in employment based on race; however, as early as 1970 the Supreme Court heard arguments on a seminal case of employment discrimination that tested the

meaning of discrimination.\textsuperscript{171} Under consideration was an employer’s ability to use aptitude tests that disproportionately excluded black workers from access to desirable “inside jobs.”\textsuperscript{172} The Supreme Court reversed the decision of the appellate court that had ruled the absence of purposeful discrimination meant that no violation of the employees’ rights had taken place.\textsuperscript{173} Instead, the Court found that the use of tests that disparately impacted blacks that were not related to job qualifications violated the protection afforded blacks under the statute.\textsuperscript{174} Within six years of the Court’s decision in the case the Supreme Court heard a similar case regarding examinations at the Washington, D.C. police academy in \textit{Washington v. Davis}.\textsuperscript{175} In that case, the Supreme Court overturned the appellate court’s decision ruling the use of a written verbal skills exam as unconstitutional because of the disparate racial impact it had excluding otherwise qualified blacks from joining the police force.\textsuperscript{176} The Supreme held that the protection provided in the \textit{Duke Power} case did not apply to the Washington D.C. police department because no such right against disparate impacts existed under the Equal Protection Clause of the Constitution and that the test was a valid and acceptable practice that could be used to improve the qualifications of the employees even if it could not be shown to improve job performance.\textsuperscript{177} These two watershed cases in civil rights law highlight the indeterminacy of legal rules and rights. Leading up to the decision courts had used the same analysis of racial discrimination claims under Title VII and the Equal Protection

\begin{flushleft}

Clause. In the *Griggs* decision, the test was unacceptable though the learned judges on
the Court of Appeals ruled that it was lawful and in the *Davis* decision the test was
unlawful though the Court of Appeals had found it acceptable. Here we have two
similar periods, two similar tests, two similar issues but two different results. In these
two cases and the numerous others like them from 1971 to 1976 and 1976 to today, a
discussion of the “right” to be free from racial discrimination adds little to an evaluation
of blacks’ ability to gain employment or access to jobs or other benefits who do not
perform as well as whites on written examinations. Although the right to be free from
racially based employment discrimination in most jobs was established in 1964, the
ability to be free from such racial discrimination is a completely different matter. To
argue for the creation of a right to be free from racial discrimination in employment in
American society has no meaning today—not because people are all free from racial
discrimination but because the right to be free exists. Persons concerned with enjoying
the actual freedom therefore might look to other means or methods to achieve it that do
not involve rights.

King’s focus on law and justice as blacks’ possession of rights promised in the
founding documents that removed the legal legitimacy of Jim Crow segregation may

have belied an inordinate emphasis on and confidence in rights to change the lived experiences of blacks.\textsuperscript{185} However, despite the indeterminacy and instability of blacks newly acquired rights the importance of blacks’ attainment of formal equality should not be undervalued.\textsuperscript{186} The destruction of white supremacy in the South as an accepted social norm substantially changed the lived experiences of black southerners, who did then and still do represent the vast majority of America’s black population.\textsuperscript{187} In the South, the call for rights and the extension of formal equality to blacks was closely intertwined with their demand for equal recognition and equal regard in the public sphere.\textsuperscript{188} King expressed this in his concerns about the immorality of segregation as a double standard that the white majority imposed upon the black minority and an assault upon the dignity of blacks that correspondingly diminished the personhood of whites.\textsuperscript{189} As such, the CLS critique fails to account for the importance of defeating the public presumption of white supremacy and superiority in the psyche of black and white southerners.\textsuperscript{190} However, the focus on rights and formal equality did limit the reach of the victory to the American south.\textsuperscript{191} King acknowledged that himself in 1965 following the riots in Watts Los Angeles.\textsuperscript{192} He asserted, “It is in the South that Negroes in this past decade experienced the birth of human dignity . . . . In the North, on the other hand, the Negro’s repellent slum life was altered not for the better but for the worse.”\textsuperscript{193} After spending time in Los

Angeles and Chicago, King came to appreciate that his focus on rights did not account for the miserable conditions of many blacks in the north and in the west who already enjoyed the formal rights the movement fought for.\textsuperscript{194} In the same address, King identified the failure of civil rights leaders to adequately account for their strategy’s northern consequence as a “miscalculation.”\textsuperscript{195} This miscalculation is what the CLS perspective helps elucidate.\textsuperscript{196}

2. **Critical Race Theory, Law and Justice**

Critical race theorists bring a critical perspective to current and past antidiscrimination law.\textsuperscript{197} Their work bears the influence of CLS but looks primarily to the limitations of antidiscrimination law and its ability to address the continuing problem of societal racism.\textsuperscript{198} Unlike CLS, Critical Race Theory (CRT) does not reject law as a viable means to produce societal reform but instead serves as more of a lamentation regarding the courts’ failure to provide racial justice in post-civil rights era cases despite the symbolic provision of formal equality.\textsuperscript{199} The most prevalent focus of CRT is the federal courts’ rejection of race-based remedies for past discrimination on the grounds that they represent a denial of formal equality for whites—in short much CRT scholarship seeks to refute the claim that race-based remedies for past discrimination are unconstitutional as a violation of the rights of whites.\textsuperscript{200} The remainder of the

\textsuperscript{195} Id.
\textsuperscript{196} Although King lacked the benefit of the CLS perspective at the time, Malcolm X had consistently pointed out the limitations of the approach. See JAMES CONE, MARTIN AND MALCOLM IN AMERICA (Maryknoll, New York: Orbis 1992) for an examination of the contrasting views and perspectives of Malcolm X and Dr. King on race in America.
\textsuperscript{198} For a discussion of relation between CRT and CLS, see Id, at 13-32.
\textsuperscript{199} Id.
\textsuperscript{200} Id.
scholarship emphasizes the prevalence of racism against blacks and other racial minorities despite formal equality and critical feminist discourses examining the intersection of race and gender.\textsuperscript{201} In this section, I focus my analysis on CRT scholars’ concern with the post-civil rights era courts’ rejection of race based remedies and its relevance to Dr. King’s vision of law and justice. Although many CRT scholars would recognize the value and importance of the rights centered formal equality rhetoric of Dr. King and the Civil Rights Movement at the time it was used, they would likely mirror King’s disappointment with the progress made beyond the extension of rights.\textsuperscript{202}

Kimberly Crenshaw authored one of the seminal works in CRT engaging both the CLS critique of rights and the neoconservative critique of race based remedies.\textsuperscript{203} In the article she raises a very important issue that has great relevance for our consideration of Dr. King’s view of law and justice.\textsuperscript{204} Drawing on a common theme in CRT that racial justice requires race based remedies; Crenshaw asserts that the provision of formal equality gained through civil rights law undermined arguments that racism bore any meaningful relationship to the material wellbeing of blacks.\textsuperscript{205} In effect, by focusing demands on the elimination of the disjuncture in the nation’s promised and afforded rights for its citizens, the movement’s success in gaining the passage of civil rights laws requiring formal equality severed the relationship between historic racism and conditions

\begin{footnotes}
\item[201] Id.
\item[202] Id., supra note 4, at 295-300.
\item[203] Crenshaw, supra note 186.
\item[204] Commenting on the strategy used by civil rights leaders she notes, “Movement leaders used these tactics to force open a conflict between whites, which eventually benefited black people. Casting racial issues in the moral and the legal rights rhetoric of the prevailing ideology helped to create the political controversy without which the state’s coercive function would not have been enlisted to aid blacks. Id. at 1381.

\end{footnotes}
of material inequality in the minds of most whites.\textsuperscript{206} She explains the distinction between symbolic and material subordination explaining:

Symbolic subordination refers to the formal denial of social and political equality to all blacks, regardless of their accomplishments . . . . Material subordination, on the other hand refers to the ways that discrimination and exclusion economically subordinated blacks to whites and subordinated the life chances of blacks to those of whites on almost every level.\textsuperscript{207}

These two, Crenshaw recognizes, were typically connected in the minds of most people.\textsuperscript{208} However, the end of legal segregation means the society’s acceptance of formal equality and the inclusion of blacks as equal members in the nation’s political vision.\textsuperscript{209} Crenshaw points out, that as a consequence blacks’ experiences of material subordination are viewed as the result of cultural inferiority rather than historic or continued discrimination.\textsuperscript{210} She goes on to elaborate that the same legal reforms that removed symbolic subordination now supports an ideological framework that makes contemporary experiences of blacks facing material subordination seem “fair and reasonable.”\textsuperscript{211}

King became painfully aware of this paradox in the last years of his life.

Commenting in two separate addresses:

Why is the issue of equality still so far from solution in America, a nation that professes itself to be democratic, inventive, hospitable to new ideas, rich, productive and awesomely powerful? America is deeply racist and its democracy is flawed both economically and socially . . . . Justice for black people will not flow into society merely from court decisions nor from fountains of political oratory. Nor will a few token changes quell all the tempestuous yearnings of millions of disadvantaged black people . . . .

When millions of people have been cheated for centuries, restitution is a costly process.212

And

Many whites hasten to congratulate themselves on what little progress we Negroes have made. I’m sure that most whites felt that with the passage of the 1964 Civil Rights Act race problems were automatically solved. Because most white people are so far removed from the life of the average Negro, there has been little to challenge this assumption. Yet Negroes continue to live with racism every day. It doesn’t matter where we are individually in the scheme of things, how near we may be either to the top or to the bottom of society; the cold facts of racism slaps each one of us in the face.213

In these passages, King addressed a significant problem that followed the passage of the Civil Rights Acts of 1964 and 1965 that concern CRT scholars—formal equality provided by the legislation could not achieve law and justice for blacks.214 King’s remarks suggest recognition that the end of lawful segregation and the formal extension of legal rights to blacks that had been afforded to whites failed to meet the full demands of law and justice by ending widespread racial discrimination against blacks or by satisfying legal notions of restitution for past wrongs.215 These realizations underscore the ways that King’s vision of law and justice based in procedural justice was incomplete—lacking an adequate vision of restorative justice.

Overall, King’s view of law and justice was well suited to the time and the needs of the majority of blacks who like him lived under the powerful grip of Jim Crow segregation. Crenshaw argues persuasively, in her article, that in fact the federal government only supported King and the Civil Rights Movement because it framed its

---

212 King, supra note 4, at .314.
213 Id. at 322.

215 Id. at 314, 322.
argument in the way that it did.\textsuperscript{216} She explains, “Because Blacks were challenging their exclusion from political society, the only claims that were likely to achieve recognition were those that reflected American society’s institutional logic: legal rights ideology.”\textsuperscript{217}

Although the rights based arguments did place limitations on the possible accomplishments of the movement, Crenshaw acknowledges, the leadership like most oppressed people found themselves “between a rock and a hard place” as broader claims beyond the rights ideology, she maintains, would have fallen on deaf ears.\textsuperscript{218}

3. Restorative Justice and Reparations

While Crenshaw’s defense of the movement’s approach carries great merit, I believe that King’s failure to include restorative justice as an essential element of law and justice in the early days of the movement was simply a mistake. By 1963, King recognized the issue. In his book, “Why We Can’t Wait” he wrote:

The ancient common law has always provided a remedy for the appropriation of the labor of one human being by another. This law should be made to apply for American Negroes. The payment should be in the form of a massive program by the government of special compensatory measures which could be regarded as a settlement in accordance with the accepted practice of common law.\textsuperscript{219}

Even here, however, it is not clear the extent to which King is fully invested in the claim.\textsuperscript{220} Although he raises the issue, he makes the broader problem of poverty for poor whites a component as well and fails to sufficiently develop the redress claim as an independent and essential element of law and justice.\textsuperscript{221} Ultimately, the claim for redress

becomes overshadowed in King’s subsequent writings and speeches by King’s focus on the federal government’s obligation to end poverty. Before that time, King consistently and tirelessly focused his arguments around ending segregation. Although King was convinced of the need to address poverty before that time, the chief concern of the Civil Rights Movement voiced by King was the end of segregation as a dictate of law and justice.

We can only speculate on what might have resulted if King had strongly linked the demand for black rights with restitution for their past abridgment as a central theme of the Civil Rights Movement. Such an approach, arguably, would have allowed for a more sweeping movement that more effectively captured the needs of blacks across the country while still keeping the end of segregation in the forefront. This would have provided a more fundamental alliance with black northerners and southerners that could have nurtured a northern component of the movement that advocated both civil rights and restitution. It also might have avoided the bifurcation of civil rights and remedial measures for past discrimination that the Court now deem unconstitutional as violations of the civil rights of whites. Of course, there are other issues that also could have and arguably should have been included in King’s view of law and justice, most importantly the extension of formal equality to women.

CONCLUSION

---

commitment to remedying slavery and past discrimination against blacks as well bringing about economic justice for whites.

222 King’s later speeches and writings consistently address the issue of poverty as a central concern with only occasional references to slavery as a justification. This does not become a focal point however, until the Voting Rights Act of 1965 was passed.

223 See JAMES CONE, MARTIN AND MALCOLM IN AMERICA for a detailed consideration of King’s views on gender.
In the same way that personalism, the nation’s founding documents, and natural law brought him to see segregation as a violation of law and justice it should have enabled him to see the same dictate for black women and all women.\textsuperscript{224} Clearly, Dr. King’s exceptional vision was less than 20/20. Today, scholars and others have come to see that law and justice dictates equality before the law regardless of race, gender, national origin, religion, disability, sexual identity, or class. This expansion of Dr. King’s vision also includes restorative justice and redress for years of segregation and exclusion suffered before and during the Civil Rights Era. Although the courts and the Congress have yet to recognize and establish legal equality and rights in all of these areas there validity and importance have become more apparent in America and around the world today than during Dr. King’s life. Nonetheless, as many critical theorists might note, legal rights and legal remedies will often fall short of the substantive goals they represent even when fully recognized. Accordingly, if looking today, perhaps Dr. King would see the challenge in an expanded way that requires both rights and remedies that preserve and protect human personality for all as a fundamental tenant of American democracy worth fighting for. Yet, we should not saddle Dr. King’s vision with the battles that history dictates that we wage; instead, we would do well to marry our own visions of law and justice with a commitment to activism that the society finds as compelling as Dr. King’s.
