Introduction

Chapter 10

A Futuristic Foreign Policy

Ces. Muddle
The European Parliament and the Council of the European Union have adopted new rules on the use of artificial intelligence (AI) in the public sector. The new rules, known as the AI Act, aim to ensure that AI technologies used by public authorities are safe, explainable, and transparent. The act covers a wide range of AI applications, from automated decision-making systems to AI-driven surveillance and monitoring systems. The EU Commission has already drafted a draft version of the act, which is now being debated in the European Parliament and the Council. The act is expected to be adopted by the end of 2022.
European policy

Why policy (monitoring) was in the Public Health Regulation

The LRT (2003) was established to ensure that the government's measures were effective in reducing the level of tobacco consumption. However, the LRT's effectiveness was limited by various factors, such as the lack of enforcement and the incentive to continue consuming tobacco.

Defence policy

The LRT's impact on reducing the level of tobacco consumption was minimal. The government's measures were ineffective due to the lack of enforcement and the incentive to continue consuming tobacco.

A Potential Future Policy

There is a need for a comprehensive tobacco control policy that addresses the root causes of tobacco consumption, such as advertising and marketing, and provides incentives for individuals to quit smoking.
