THE AMERICAN CULTURE OF STUDYING AND TAKING LESSONS FROM DISASTERS – LESSONS FOR KENYA

Following is a list of documents that show clearly that America employs a multiagency approach to carefully study disasters and take lessons that inform future response. Very interestingly, such lessons are shared publicly.

In the recent past, Kenya has experienced several disasters including terrorist attacks, famine, military defeats, drought, water shortages, traffic jams, and fire disasters, to mention but a few. Kenya needs to develop a culture of thoroughly studying such disasters and taking lessons. Reports of such studies should be shared widely as part of public information and as a way for the government to self-impose accountability.
