Consumer Protection Out of the Shadows of Shadow Banking: The Role of the Consumer Financial Protection Bureau

David J Reiss, Brooklyn Law School
IN THE SHADOW OF SHADOW BANKING

CONSUMER PROTECTION OUT OF THE SHADOWS OF SHADOW BANKING:
THE ROLE OF THE CONSUMER FINANCIAL PROTECTION BUREAU

David Reiss*

Consumer protection remains the stepchild of financial regulation. Notwithstanding the fact that the economic doldrums we find ourselves in originated in the under-regulated subprime mortgage sector, relatively few academic commentators focus on the role that consumer protection can play in reducing such risks as well as in restoring the balance between consumer and producer in the financial markets. This essay suggests that consumer protection regulation has an important role to play in the regulatory structure of the shadow banking sector.

This essay does four things. First, it describes the role of shadow banking in the residential mortgage market—the shadow mortgage banking sector, as it were. Second, it contrasts two mortgages. One is emblematic of shadow mortgage banking during the Subprime Boom. The other is Dodd-Frank’s response to the excesses of the Subprime Boom—the “Qualified Mortgage.” It then evaluates whether “Qualified Mortgages” can restrain some of shadow mortgage banking’s excesses, and finds that they may be able to do so. It concludes by reviewing the first steps taken by the Consumer Financial Protection Bureau as it begins implementing Dodd-Frank’s mortgage-related provisions.

I. SHADOW MORTGAGE BANKING

The shadow mortgage banking system dwarfs the banking system’s role in the residential mortgage markets.¹ A key component of the shadow banking² system is the securitization of credit,³ particularly

---

* Professor of Law, Brooklyn Law School. Versions of this essay were presented at the The Consumer Financial Protection Bureau After One Year symposium at Brooklyn Law School on March 2, 2012 and the Shadow Banking symposium at the Boston University School of Law on February 24, 2012. The author would like to thank participants of the symposiums for their comments. KeAupuni Akina provided excellent research assistance.

of residential mortgages. However, shadow banking institutions that originated residential mortgages, particularly subprime mortgages, were much less regulated than banking institutions that had the same line of business. As a result, they were less constrained by consumer protection regulations. They were also able to lower their underwriting standards in order to increase their market share.

This weaker underwriting could be seen in the proliferation of exotic mortgage products that

(i) did not require a down payment;
(ii) allowed for negative amortization, and
(iii) had no-doc verification of income and assets for underwriting purposes, the notorious “liar loan.”

3 Schwarz, supra note 2, at 5 (observing that “a large part of what is considered in today’s markets to be structured finance involves securitization”).

7 See Adam J. Levitin et al., The Dodd-Frank Act and Housing Finance: Can It Restore Private Risk Capital to the Securitization Market?, __ YALE J. ON REG. __, 5 (forthcoming 2012), available at http://ssrn.com/abstract=1970288 (“Lacking a stake in the performance of mortgages, securitizers were willing to securitize poorly underwritten loans.”).

8 “Negative amortization” refers to loans for which the principal amount of the loan increases over the term of the loan despite timely payments by the borrower. See Reiss, Subprime Standardization, supra note 5, at 1028.

9 ADRIAN, supra note 4.
These exotic mortgages allowed lenders to lend to many borrowers who did not have the credit profile of the traditional prime borrower.  

Secondary market shadow bankers encouraged this phenomenon partially because a bigger consumer pipeline meant more mortgage-backed securities underwriting and thus more fees.  But they also encouraged it because subprime mortgages could generate higher profits than comparable prime mortgages because of their significantly higher interest rates and more opaque pricing.

During the early 2000s, the shadow mortgage banking sector appeared to excel at providing inexpensive funding by taking illiquid and in some cases risky and confusing individual mortgages and converting them into liquid, investment grade, fungible securities. But while the shadow mortgage banking sector appeared to convert illiquid mortgages into liquid investments, it in fact did the opposite by "fund[ing] illiquid assets with short-term liabilities," creating a liquidity mismatch that is prone to runs, much like bank runs. Because that process of securitization was built on a faulty foundation, it contributed in no small part to the Subprime Boom and Bust.

The systemic problem with the subprime sector’s origination practices was not just that they were originating mortgages that were more likely to default. Underwriting standards for securitized pools can address this concern if the higher rates of default are predictable.

---

10 Gerding, supra note 1, at 30.
13 Pozsar, supra note 2, at 14.
14 See Hsu & Moroz, supra note 6, at 7. A “bank run” occurs when a bank’s depositors withdraw their deposits from a bank because they fear it is insolvent. Because even healthy banks keep only a small percentage of their deposits on hand, a bank run can ruin even a healthy bank.
15 See id. at 7, 11-18 (describing the role of shadow banking in the 2008/2009 financial crisis
16 Christopher S. Gerardi et al., Fed. Reserve Bank of Boston, No. 09-1, Making Sense of the Subprime Crisis 7 (2008), available at http://www.bos.frb.org/economic/ppdp/2009/ppdp0901.pdf (subprime mortgage “[l]oans originated with less than complete documentation of income or assets, and particularly those originated with both high leverage and incomplete documentation, exhibited sharper rises in defaults than other loans”).
17 See id. at 2 (suggesting that the ability to accurately predict rates of default would have helped to curb lax underwriting and rating standards leading up to the subprime credit boom).
IN THE SHADOW OF SHADOW BANKING

thornier problem, from a mortgage-backed securities underwriting perspective, is that market participants did not understand how risky those mortgages were and how rapidly the risk profile of mortgage products originated by many shadow banking institutions changed. In other words, underwriters and rating agencies had no baseline from which they could establish reliable default rates for all of the new products that were originated during the Boom. Many other academics have called for increased regulation of the shadow banking sector in order to secure its foundation. But few have focused on the role of consumer protection regulation as part of that new foundation.

II. A TALE OF TWO MORTGAGES

The following tale of two mortgages provides a good context for understanding the role of consumer protection in shadow banking regulation. One of my most striking memories from the height of the Subprime Boom involves a phone call from a reporter for the WALL STREET JOURNAL. He wanted me to comment on a particular type of high interest mortgage marketed by a national lender.

---

18 See Pozsar, supra note 2, at 3; Schwarcz, supra note 2, at 17. 19 See also Tobias Adrian & Adam B. Ashcraft, FED. RESERVE BANK OF N.Y., STAFF REPORT NO. 559, SHADOW BANKING REGULATION 7-8, 50 (2012), available at http://ssrn.com/abstract=2043153 ( likening the breakdown of reliable creditworthiness information to a game of telephone where each step of transformation made it difficult for investors to understand their risk exposure).

19 See Pozsar, supra note 2, at 3; see also Schwarcz, supra note 2, at 18.

20 See, e.g., Schwarcz, supra note 2, at 26-27 (regulation of shadow banking may require a holistic approach that includes other agencies because shadow banking effects various regulatory agencies that may oversee banks, securities, or derivatives); Gorton & Metrick, supra note 5, at 21-23 (arguing that securitization is merely another form of banking and so functions of shadow banking that are similar to bank functions should be similarly regulated).

The mortgage came with a two-year teaser cap on loan payments (not on the interest rate mind you—on the payments!). It also had a three-year prepayment penalty period. This can create a perfect storm for a borrower, particularly for an unsophisticated one. For once the artificially low payments of the two-year teaser period end, the borrower might find it difficult to make her payments on the loan.

Now, remember that the mortgage has a prepayment penalty. If the borrower tries to refinance from this high interest rate product to a more appropriate one after the two-year teaser cap is lifted, she will be forced to pay a prepayment penalty. That is because the prepayment penalty period lasts for three years, a year longer than the teaser cap on payments. This ensures that the lender wins—one way or another.

Let’s turn to another species of mortgage, Dodd Frank’s “Qualified Mortgage,” as well as its statutory sibling, the “Qualified Residential Mortgage.” Dodd-Frank tries to reduce the risk of a systemic failure by regulating the quality of mortgages that are securitized by banks and shadow banks. The “Qualified Mortgage” is one that is privileged in Dodd-Frank in order to incentivize lenders to originate them instead of other types of mortgages.

---

24 Dodd-Frank enacts enhanced supervision and prudential standards for nonbank financial companies for the following purpose:

(1) PURPOSE.—In order to prevent or mitigate risks to the financial stability of the United States that could arise from the material financial distress, failure, or ongoing activities of large, interconnected financial institutions, the Council may make recommendations to the Board of Governors concerning the establishment and refinement of prudential standards and reporting and disclosure requirements applicable to nonbank financial companies supervised by the Board of Governors and large, interconnected bank holding companies, that—

(A) are more stringent than those applicable to other nonbank financial companies and bank holding companies that do not present similar risks to the financial stability of the United States; and

(B) increase in stringency, based on the considerations identified in subsection (b)(3).

25 See generally Dodd-Frank Act § 1412, 124 Stat. 2145-48. The Dodd-Frank Act requires that the Bureau promulgate rules relating to “Qualified Mortgages.” Id.
The “Qualified Mortgage” provides lenders with a safe harbor from certain provisions of the Truth in Lending Act (“TILA”) as well as from Dodd-Frank’s mandatory “ability to repay” underwriting standards. The net effect is to create a kind of “plain vanilla” mortgage option that lenders will want to originate because they pose fewer regulatory and litigation risks.

This plain vanilla option is meant to crowd out a number of abusive practices that sprang up during the Subprime Boom. While not labeled explicitly, the elements of the “Qualified Mortgage” definition are tied to notorious mortgage products.

The first elements bars negatively amortizing mortgages. The second bars liar loans. The third bars balloon payments which protects borrowers from payment shock. The fourth bars underwriting based on

---

26 Id. The “safe harbor” is a rebuttable presumption that a “Qualified Mortgage” meets Section 1411 of the Dodd-Frank Act’s “ability to repay” standards. Id.; see generally id. § 1411(a)(2), 124 Stat. 2142 (to be codified at 15 U.S.C. § 1639c(a)). FHA and GSE-insured loans are exempt from the “skin in the game requirements.” See id. § 941(b) (to be codified at 15 U.S.C. § 75o-11(c)(1)(G)(ii)) (requiring that several government agencies promulgate “a total or partial exemption” for FHA and GSE-insured loans, thus excluding the loans from the “credit risk retention requirements”). A “Qualified Residential Mortgage,” on the other hand:

defines which loans will be exempt from requirements that at least five percent of the credit risk be retained by the securitizer. While the [“Qualified Mortgage”] ‘ability to repay’ obligation will apply to all residential mortgages, the [“Qualified Residential Mortgage”] definition will apply only to mortgages that are privately securitized.

27 John Pottow, Ability to Pay, 8 BERKELEY BUS. L.J. 175, 175-76 (2011). The definitions of “Qualified Mortgage” and “Qualified Residential Mortgage” bring back to life the “plain vanilla” mortgage option that had been heatedly debated before the Dodd-Frank Act was adopted but had been rejected in its original incarnation. Id.

29 “Balloon payments” are loans where “monthly payments are lower but one large payment (the balloon payment) is due when the loan matures. Predatory loans may contain a balloon payment that the borrower is unlikely to be able to afford . . . [s]ometimes, lenders market a low monthly payment without adequate disclosure of the balloon payment.” U.S. GEN. ACCOUNTING OFFICE, CONSUMER PROTECTION: FEDERAL AND STATE AGENCIES FACE CHALLENGES IN COMBATING PREDATORY LENDING 19 (2004), available at http://www.gao.gov/new.items/d04280.pdf [hereinafter GAO, CONSUMER PROTECTION].
teaser and adjustable interest rates, again to limit payment shock. The fifth bars equity-based lending. The sixth limits high points and fees to limit equity stripping. And the seventh limits mortgage terms to 30 years to reduce the likelihood of a borrower being caught in an endless cycle of debt.

III. THE ROAD AHEAD

Can this new regulatory approach to shadow mortgage banking succeed? It does face a lot of challenges at both the origination level as well as the securitization level. It says that paternalism is appropriate in some contexts. It limits the flexibility of parties to modify a mortgage when compared to how society regulates goods and services generally. It may restrict credit needlessly. And it may be irrelevant.

A. Paternalistic

It had long been the view among economists that consumer protection is paternalistic to the extent that consumers are rational.
Behavioral economics has challenged this notion, demonstrating that consumers can behave in predictably irrational (and indeed, in some cases, in rationally ignorant) ways. The Subprime Bust has made paternalism much easier to swallow as a policy choice because so many have made such spectacularly bad choices. And behavioral economics has provided a theoretical justification for paternalistic government policies that some had found lacking until recently.

B. Limits Flexibility

It is well established that rules-based regulation is less flexible than a standards-based approach or an unfettered market for that matter. The definition of a “Qualified Mortgage” surely falls within the scope of rules-based regulation, with its bars on numerous mortgage characteristics. The Dodd-Frank Act did, however, build significant regulatory flexibility into its regulation of mortgages. Dodd-Frank authorizes regulators to “prescribe regulations that revise, add to, or subtract from the criteria that define a qualified mortgage . . .” It remains to be seen whether regulators will be nimble enough to deploy such flexibility, but the option is certainly there.

C. Restricts Credit

Consumer advocates and real estate industry trade groups argue that strict underwriting criteria contained in the proposed “Qualified Residential Mortgage” definition will restrict credit to many who could benefit from it because of its high down payment requirements.

36 See Isaac Ehrlich & Richard A. Posner, An Economic Analysis of Legal Rulemaking, 3 J. LEGAL STUD. 257, (1974) (“A rule withdraws from the decision maker’s consideration one or more of the circumstances that would be relevant to decision according to a standard”).

37 Dodd-Frank § 1412 (defining “Qualifying Mortgage”). See supra text accompanying note 33.

38 Dodd-Frank § 1412(b)(3)(B) (emphasis added). See also 15 U.S.C. § 78o-11(e) (allowing Federal banking agencies and SEC to adopt exemptions, exceptions and adjustments to “skin in the game” requirements).

39 COAL. FOR SENSIBLE HOUS. POLICY, PROPOSED QRM DEFINITION HARMs CREDITWORTHY BORROWERS WHILE FRUSTRATING HOUSING RECOVERY 1 (2011), available at http://www.responsiblelending.org/mortgage-lending/policy-legislation/regulators/Coalition-QRM-White-Paper-1.pdf. The Coalition argues that “once you apply the strong underwriting standards in the sample QRM definition, moving from a 5 percent to a 10 percent down payment requirement reduces the overall default experience by an average of only two- to three-tenths of one percent for each cohort
Finding the right balance between responsible underwriting and access to credit is, of course, key. But again, Dodd-Frank has the flexibility to achieve that result.

D. Possibly Irrelevant

The “Qualified Mortgage” and its statutory sibling, the “Qualified Residential Mortgage,” also face serious challenges in the secondary mortgage market. The “Qualified Mortgage” and “Qualified Residential Mortgage” definitions may be too narrow such that they will not crowd out less consumer-friendly mortgage products from the market. The definitions could be too broad such that they allow in many risky mortgage products. Both paths could lead to a return to a mortgage market where abusive lending practices return with a vengeance and pose systemic risk to the financial system. Finally, the definitions could be just so lousy that they could lead to a dormant mortgage market, with a concomitant catatonic housing market. Thus, a key question is whether the definitions achieve a sweet spot among the approaches that could be taken.

IV. The Bureau’s Agenda

The agenda of the Consumer Financial Protection Bureau (the Bureau) has begun to take shape. The Bureau is the new agency created by Dodd-Frank that has much of the authority over Dodd-Frank’s year. However, the increase in the minimum down payment from 5 percent to 10 percent would eliminate from 4 to 7 percent of borrowers from qualifying for a lower rate QRM loan.” Id. at 6.

40 Levitin et al., supra note 7, at 11. Many argue that narrow “Qualified Mortgage” and “Qualified Residential Mortgage” definitions will be detrimental to the growth of the mortgage market. See Quercia et al., supra note 26, at 6, 10, 27-29, 33-35 (arguing that stringent underwriting requirements for “Qualified Mortgages” will provide a small increase in foreclosure reduction at the cost of significant restrictions in credit access for low to middle-income borrowers); see also Raymond Natter, Congressional Intent Regarding the Qualified Mortgage Provision, 98 BANKING REP. (BNA) 921 (May 22, 2012) (discussing Congressional concern that a narrow definition will result in unanticipated restrictions in “mortgage credit availability for traditional loans,” and that a narrow definition will prevent regulation from keeping up with financial products developed in the future).

41 Levitin et al., supra note 7, at 11. A related question is whether regulators can keep up with market participants as they attempt to circumvent the spirit of the regulations while complying with their letter. See Richard Hynes & Eric Posner, The Law and Economics of Consumer Finance, 4 AM. L. & ECON. REV. 162, 198 (2002).

42 See Levitin et al., supra note 7, at 23.
mortgage-related provisions. The Bureau’s Assistant Director for Regulations, Leonard N. Chanin, stated that the “bulk of the [Bureau]’s activities” in 2012 will be occupied by providing guidance regarding mortgage statutes and rulemaking. The most important initiatives will be finalizing the rules for Dodd-Frank’s “ability to repay” and “Qualified Mortgages” provisions. Chanin also noted that “[p]retty much the entire mortgage arena as we know it will be covered by the rules . . . [and] a lot of future rule makings really hinge on the adoption of these rules because they are so broad in terms of the mortgage market.”

The Bureau’s agenda for residential mortgage regulation can be inferred from its various proposed rulemakings, requests for comments, and consumer initiatives. The Bureau is clearly focusing on broadly accepted forms of consumer protection such as disclosure requirements and consumer education that address information asymmetries in the financial markets. It is also promulgating paternalistic regulations that set up bright line rules for products and behavior in the mortgage market and is complementing such regulations with closer supervision for formerly under-regulated mortgage market actors—the shadow mortgage banking sector.

This section will provide a brief overview of the Bureau’s activities thus far and its agenda for the immediate future with regard to home mortgage lending regulation. A preliminary evaluation indicates that the Bureau is balancing increased regulation with regulatory flexibility, implicitly acknowledging that such flexibility is necessary for a properly functioning market. Such an approach bodes well for consumers. As such it may also bode well for a reduction in systemic risk in this sector of the financial industry, the sector that gave us the Subprime Crisis. This is because that crisis demonstrated that a large sector of the consumer economy can go off the rails for quite some time before the financial markets take note. To the extent that consumer protection keeps a sector from doing so, it can reduce systemic risk.

43 Dodd-Frank Act § 1400, 124 Stat. 2136 (to be codified at 12 U.S.C. § 5481) (the Dodd-Frank Act names the Mortgage Reform and Anti-Predatory Lending Act as an enumerated consumer law which falls under the purview of the Bureau).

45 Id.

46 Id.
A. Disclosure

Disclosure requirements are designed to reduce information asymmetries between consumers and producers. Disclosure requirements are accepted across the political spectrum. Nonetheless, it is unclear how effective disclosure requirements are and whether the Bureau’s efforts in this regard will be more successful than those that have come before.

The Bureau is working to increase transparency and the exchange of information between borrowers and lenders through two initiatives. First, the Bureau is developing a consolidated mortgage loan disclosures proposal to consolidate mortgage loan disclosures and related rules under the Truth in Lending Act and the Real Estate Settlement Procedures Act. As a part of the Bureau’s Know Before You Owe initiative, the Bureau will combine the Truth in Lending Disclosure with the HUD-1 Settlement Statement that lenders give to consumers taking out loans to purchase a home or refinance a mortgage. The Bureau is currently in the final rounds of testing and soliciting comments on their proposed Loan Estimate and Settlement Disclosure forms.

---

48 See generally Lauren E. Willis, Decisionmaking and the Limits of Disclosure: The Problem of Predatory Lending, 65 MARYLAND L. REV. 707 (2006) (arguing that mandatory disclosure may be insufficient to overcome consumer decisionmaking heuristics).

IN THE SHADOW OF SHADOW BANKING

The Bureau is also proposing new rules relating to the servicing of mortgages.52 These proposals include requirements for clearer mortgage statements; clear warnings before the interest rates on ARMs adjust; options for avoiding lender-imposed ‘force-placed’ property insurance; and lender options for avoiding foreclosure.53 The proposals also include requirements that mortgage payments be immediately credited; payment records be kept as up-to-date and as accessible as possible, given the size of the servicer; errors be corrected as quickly as possible; and foreclosure prevention teams be maintained by the servicer.54

Finally, the Bureau is issuing, pursuant to Dodd-Frank, a monthly mortgage statement form,55 which is intended to assist consumers in appropriate budgeting.56 The form will include information about key current loan terms (principal amount and interest rate) and key information about the mortgage, such as the reset date for adjustable rate mortgages and the amount of any late or prepayment fees. Finally, it contains information about how to contact housing counselors if the homeowner is in financial distress.57

It is encouraging to note that the Bureau is testing its new disclosure forms. But the Bureau has not yet made clear whether it will be testing them once they are adopted. Only ongoing testing will determine whether improved disclosures will actually have a systemic impact on consumer choices.58

53 See NO SURPRISE, supra note 52, at 2-3.
54 See id. at 3-4.
55 Dodd-Frank Act § 1420, 124 Stat. 2156.
57 See Patross, supra note 56.
58 See generally Willis, supra note 48.
B. Education

Some, including the Bureau leadership, believe that financial education for consumers is key to consumer protection because better educated consumers make better informed loan decisions. 59 Others are more skeptical. 60 The Bureau provides mortgage payment and foreclosure prevention advice on its website. 61 The Bureau’s website also provides referrals to local foreclosure prevention resources and specialized assistance for servicemen and veterans. 62 As these measures are still in their infancy, the jury is still out as to whether these education efforts will improve outcomes for individuals and the financial system. And as with the disclosure initiatives described above, ongoing empirical testing will be key to demonstrating the impact of consumer education initiatives.

C. Bright Line Rules and Increased Supervision

Government-run consumer protection regimes premised on bright line rules are vulnerable to evasion by nimble, profit-maximizing private sector actors. 63 Nonetheless, many of the worst excesses of the Subprime Boom arose from a small number of underwriting innovations such as “equity based lending” and “liar loans.” Dodd-Frank, as implemented by the Bureau, bans some of the worst of these

59 See, e.g., CONSUMER FINANCIAL PROTECTION BUREAU, BUILDING THE CFPB: A PROGRESS REPORT 19 (2011), available at http://files.consumerfinance.gov/f/2011/07/Report_BuildingTheCfpb1.pdf (“This division provides, through a variety of initiatives and methods, information to consumers that will allow them to make the decisions that are best for them. Consumer education is a central mission of the Bureau.”).

60 Lauren E. Willis, Against Financial-Literacy Education, 94 IOWA L. REV. 197, 201 (2008), available at http://ssrn.com/abstract=1105384 (“The gulf between the literacy levels of most Americans and that required to assess the plethora of credit, insurance, and investment products sold today - and new products as they are invented tomorrow - realistically will not be bridged.”).

62 Id.

63 See Posner & Hynes, supra note 41, at 197-98 (2002) (“it is not clear how much the law would influence the behavior of even a rational, well-informed consumer, given the many loopholes, the limited penalty structures, and the many ways in which creditors can evade the law and creditors and debtors can contract around it.”).
“innovations” and incentivizes the private sector to use some of the others much less frequently than they did in the Boom. As with the disclosure and education initiatives, it remains to be seen how effective this approach will be.

One of the most important tasks for the Bureau in this regard is to finalize the hotly debated definitions for “Qualified Mortgages” and “Qualified Residential Mortgages” discussed above.64 The Bureau has also expanded its regulatory authority by extending supervision from banking institutions to nonbanks.65 The Bureau will assess whether nonbanks are in violation of federal consumer financial laws including TILA and the Equal Credit Opportunity Act (ECOA).66 This will be accomplished by employing a risk-based nonbank supervision program that focuses on risks posed to consumers.67 The Bureau has issued a proposal for public comment68 describing procedures that will allow it to “notify a nonbank firm that it is being considered for supervision because the bureau ‘may have reasonable cause’ to determine that the financial products or services offered pose risks to consumers.”69 While these notifications do not constitute charges for an alleged consumer protection violation, they are a way for the Bureau to reach nonbanks and notify them that they are being individually supervised by the Bureau.70

The Bureau has also expanded its regulatory scope by issuing notices to the mortgage loan industry regarding regulation and advised practices. For example, Director Cordray has stated that the Bureau will

64 See Regulatory Priorities, supra note 49.
65 Peggy Twohig & Steve Antonakes, Consumer Financial Protection Bureau, The CFPB launches Its Nonbank Supervision Program, CONSUMERFINANCE.GOV, http://www.consumerfinance.gov/blog/the-cfpb-launches-its-nonbank-supervision-program/ (last visited May 23, 2012) (“the CFPB has authority to oversee nonbank businesses, regardless of size, in certain markets: mortgage companies (originators, brokers, and servicers, and loan modification or foreclosure relief services); payday lenders; and private education lenders”).
66 Id.
67 Id.
69 Mike Ferullo, Consumer Bureau Lays Out Procedures For Notifying Nonbank Firms of Supervision, 98 BANKING REP. (BNA) 941 (May 29, 2012).
70 Id.

Finally, the Bureau has acknowledged that flexibility is essential to a properly functioning market. This doctrine is reflected in the Bureau’s efforts to address concerns particular to non-bank and smaller banking entities.\footnote{The Bureau has established an Office for Community Banks and Credit Unions: “to ensure that the Bureau incorporates the perspectives of small depository institutions into our policy-making process; to communicate relevant policy initiatives to community banks and credit unions; and to work with community banks and credit unions to identify potential areas for regulatory simplification.” CONSUMER FINANCIAL PROTECTION BUREAU, COMMUNITY BANKS AND CREDIT UNIONS, http://www.consumerfinance.gov/small-financial-services-providers/ (last visited May 23, 2012).} It has also manifested a sensitivity to concerns about over-regulation. This has been seen in its willingness to adapt to changing market realities as seen in the Bureau’s final regulations regarding Home Mortgage Disclosure (Regulation C).\footnote{12 C.F.R. § 1003 (2012), available at http://www.gpo.gov/fdsys/pkg/FR-2012-02-15/pdf/2012-3460.pdf. Mortgage lenders in metropolitan areas with assets of $41 million or less are exempt from requirement to collect data about their housing-related lending activities. Id.}

As noted above, the Bureau has to walk a fine line between protecting consumers from poor choices on the one hand and limiting consumer choice on the other. If it goes too far in one direction, it can reduce access to credit. If it goes too far in the other, it can leave consumers to fend for themselves against rapacious lenders in a predatory market. The stakes for homeowners and the housing sector are as high as can be. But the broader impact is also of great consequence, given the role that housing and residential construction play in the overall economy.

V. CONCLUSION

While the initial signals are positive, the jury is still out on how effective the Dodd-Frank consumer protection regime, as implemented by the Bureau, will be in protecting homeowners and promoting a vibrant market for residential mortgages. Nonetheless, the role of
consumer protection should always be front and center in discussions of shadow mortgage banking regulation. It is essential to healthy markets for the origination and securitization of residential mortgages. And it is essential to the legitimacy and functioning of the financial system overall. And past experience has shown that we leave it in the shadows at our peril.
