PUBLICATIONS:

Student Preparation for Active Learning: An Integrative Review -- Manuscript submitted for consideration of publication December 2014

Evidence of Teaching

As well as receiving positive evaluations from students for clinical teaching, I have also been asked to be a guest lecturer for NUR 33600 the past two semesters. I originally prepared this lecture as a project for one of my nursing education classes. After presenting it for the first time, I have been asked back to teaching in subsequent semesters. I feel this is a true honor that a faculty member would allow me to present this lecture multiple times.

This lecture consists of many types of learning. There is video demonstration, video personal stories from patients, active learning, and unfolding case studies. Students have enjoyed the variety of methods of learning during this lecture. In addition I have learned something each time I have presented the information and have grown in my teaching.

These “lectures” can be made available if requested.
