Demand Promissory Notes and Commercial Loans: Balancing Freedom of Contract & Good Faith

George A. Nation III*
Demand Promissory Notes and Commercial Loans:
Balancing Freedom of Contract & Good Faith

I. Introduction

Promissory notes are ubiquitous in commercial lending. The promissory note represents the borrower’s promise to repay. The Uniform Commercial Code’s Article 3 governs promissory notes. Under Article 3, promissory notes are either demand instruments or time instruments. In general, the holder of a demand instrument may decide to demand payment at any time and for any reason, while the holder of a time note must wait for payment until the arrival of the specific repayment date or dates included in the note. For this reason, time notes usually contain an acceleration clause. An acceleration clause allows the holder to accelerate, move forward in time, the maturity date of the note if certain events occur. These events, usually defined as “events of default”, typically indicate a decline in the borrower’s credit rating. An acceleration clause allows the lender to require (demand) payment of the loan early, but only if an event of default occurs. Given the fact that most commercial borrowers plan an ill liquid use of the

3 See U.C.C. § 3-102, 3-104 (especially Official Comment 2 discussing the relevance of Article 3 to nonnegotiable instruments).
4 See U.C.C. § 3-108 (a)-(b) (2002) (defining “payable on demand” and “payable at a definite time”).
5 See infra notes 130 - 140 and accompanying text.
6 A time note gives the borrower the right to the borrowed funds until maturity. See U.C.C. 3-108.
8 See HEMMENDINGER, supra note 1, § 9:10; Nation, Recognition supra note 7 at 97-100.
9 HEMMENDINGER, supra note 1, § 9:10; Nation, Recognition supra note 7 at 99-100.
10 See HEMMENDINGER, supra note 1, § 9:10.
borrowed funds it may seem odd that demand notes are also often used in the commercial lending context.\textsuperscript{11} However, many lenders see advantages in using demand notes.\textsuperscript{12} These advantages usually relate to perceived enforcement flexibility.\textsuperscript{13} That is, many lenders believe, sometimes incorrectly, that if they use a demand note to document the loan they not only have the right to decide to demand payment at any time, but they also have the right to receive repayment of the loan as soon as they demand payment.\textsuperscript{14} Borrowers on the other hand, may interpret the “payable on demand” language as similar to an acceleration clause; that is, some

Thus, holders of time notes must wait for either the payment date provided for in the note or the occurrence of an event of default before they have a right to repayment of the note. The holder of a time note does not have the right to decide unilaterally to accelerate the note; the occurrence of an event of default is either beyond the holder’s direct control or must be an event that would give rise to a good faith belief that the prospect of payment has been impaired. It is important to note that the occurrence of an event of default may also be beyond the borrower’s control.

\textsuperscript{12} See generally George A. Nation III, \textit{Commercial Loans Payable on Demand: Poor Note Drafting Continues to Cause Problems for Lenders}, 116 Banking L.J. 313 (1999) [hereinafter Nation, \textit{Commercial}] noting the following:

Many of a lender’s most important remedies, such as set-off and foreclosure, are only available after the loan becomes due and payable. Thus, lenders often desire as much flexibility as possible to make the loan due and payable. As discussed, if the loan is documented with a time note, the only way to make it due and payable early is to accelerate the note. However, a prudent lender should only accelerate a loan if it is convinced that it can demonstrate that it reasonably believed that the repayment of the loan was in jeopardy. Some lenders believe that the burden of establishing to a jury, in the context of a lender liability lawsuit, that the lender reasonably believed that repayment of the loan was in jeopardy, is a significant burden. For lenders who wish to avoid this burden, time notes are not acceptable.

\textsuperscript{13} \textit{Id}.

\textsuperscript{14} Some courts have held, based on the legal fiction that demand notes are mature from the moment of their execution, that a pure/traditional demand note (not a demandable note) can be collected at any moment by the holder. See discussion \textit{infra} at notes 68 & 85 and accompany text.
borrowers may believe, sometimes incorrectly, that the lender will demand payment only if the borrower’s credit worthiness declines.\textsuperscript{15}

Article 3 was substantially revised in 1990,\textsuperscript{16} and some minor revisions were made in 2002.\textsuperscript{17} The 1990 revisions, \textit{inter alia}, clarified in some respects the treatment of demand notes, however the revisions also created some confusion as to the difference between time and demand notes.\textsuperscript{18} The purpose of this article is to discuss the proper way to balance freedom of contract and good faith when demand notes are used in the commercial lending context. In other words, how should courts accommodate the different interpretations that lenders and borrowers often have of demand notes?

II. Background

A. The \textit{Reger} Case

A good illustration of the use of a demand note by a commercial lender and the potential problems associated with such use can be found in the case of \textit{Reger Development, LLC v. National City Bank},\textsuperscript{19} which was decided by the Seventh Circuit Court of Appeals in 2010.\textsuperscript{20} Reger Development, an Illinois LLC, was involved in real estate development and Kevin Reger was Reger Development’s principal and sole
member. In June 2007, Reger and National City Bank entered into discussions concerning the possibility of a loan from the Bank to Reger for the purpose of financing potential development opportunities. National City Bank had lent funds to Reger Development for similar purposes on a number of previous occasions. That is, the parties had an established course of dealing. Kevin Reger met with National City’s representative to discuss the loan and asked about changing the terms of form documents that had been suggested by the bank to document the proposed line of credit. The suggested form documents purported to create a demand obligation. Kevin Reger was told that the form documents presented by National City where nonnegotiable. Kevin Reger on behalf of Reger Development executed the form documents, which consisted of a promissory note and a commercial personal guarantee signed by Kevin Reger in his individual capacity, guaranteeing the debt of Reger Development. Reger Development also paid a $5,000 closing fee for the line of credit. The promissory note provides that Reger will pay “on demand” the principal amount of the loan. Interest payments were to be made monthly based on the outstanding principal amount. In addition, the note provides, the following: “Payment: Borrower will pay this loan in full immediately

upon lender's demand.” However, the note also provides: “Notwithstanding any other provisions set forth in this Note, if (a) any principal owing under this note remains unpaid after Lender shall have given Borrower notice of demand for payment thereof or after the commencement of any proceeding under any bankruptcy or insolvency laws by or against Borrower or (b) any accrued interest under this note remains unpaid after the due date of that interest, then, and in each such case, all unpaid principal of this note shall bear interest at a rate of (3%) three percent per annum above the rate that would otherwise be applicable”. Also, notwithstanding the $5,000 closing fee paid by Reger Development, the note stated in bold the following: “NO COMMITMENT: NOTWITHSTANDING ANY PROVISION OR INFERENCE TO THE CONTRARY, LENDER SHALL HAVE NO OBLIGATION TO EXTEND ANY CREDIT TO OR FOR THE ACCOUNT OF BORROWER BY REASON OF THIS NOTE.” The note also included an integration clause, stating that, the documents were the complete agreement between the parties.

A year after the documents were executed, June 2008, the bank requested updated personal financial statements and tax returns, which the note gave the bank the right to request. The Borrower provided the requested documents. On August 19, 2008, notwithstanding the fact that Reger Development was in full compliance with all of the terms of the loan documents, including being fully up-to-date in the payment of all interest charges due, National City asked the company to
pay down $125,000 of the principle of the line of credit, which the borrower did the next business day. On September 9, 2008, at which time Reger Development continued to be in full compliance with all of its obligations under the loan documents, National City requested that Reger Development term out $300,000 of the note by having one of Kevin Reger’s other businesses take out a three-year loan in that amount secured by a second mortgage on other real estate. The bank also notified the borrower that it would be reducing the amount of money available under the line of credit to between $400-$500,000, down from the original $750,000. Kevin Reger was surprised by the banks actions and requests and asked if National City would call the line of credit if Reger Development did not agree to the Bank’s “requests”. The Bank acknowledged that Reger Development was not in default but stated, “there is a possibility that we may demand payment on the line”. Reger Development then sued the bank, filing a complaint in Illinois State court accusing National City of breaching the terms of the note. The company also alleged the National City used the form promissory note to perpetuate a fraudulent scheme in which the bank deceived people into taking out loans by concealing the fact that the principal could be called on demand. The Bank was headquartered in Cleveland, Ohio and removed the case to the Northern District of Illinois under diversity jurisdiction. The Bank successfully moved to dismiss the complaint for
failure to state a cause of action.\textsuperscript{45} The district court rejected Reger Development's motion for reconsideration and Reger Development appealed to the Seventh Circuit Court of Appeals.\textsuperscript{46}

With regard to the breach of contract claim, Reger Development alleged that National City breached the loan contract by arbitrarily and capriciously demanding payment under the line of credit even though Reger Development was in good standing and by unilaterally changing, and attempting to change the fundamental terms of the contract documents without Reger Development's consent.\textsuperscript{47} In this connection Reger Development identified several provisions in the note that it claimed were fundamentally inconsistent with the nature of a demand instrument.\textsuperscript{48} These provisions include a default interest provision, a prepayment clause, (that allowed Reger Development to pay “all or a portion of the amount owed earlier than it is due”, and a provision providing National City the right to access Reger Development’s financial information, which Reger Development characterized as a financial insecurity provision.\textsuperscript{49}

As a result of these provisions, Reger Development argued that the note, notwithstanding it's payable on demand language, created an obligation that allowed National City to demand payment only if Reger Development suffered some type of economic adversity.\textsuperscript{50} That is, Reger claimed that the note should be interpreted as a time note and the demand provision should be interpreted as a type

\textsuperscript{45} Id.
\textsuperscript{46} Id.
\textsuperscript{47} Id. at 764.
\textsuperscript{48} Id. at 765.
\textsuperscript{49} Id.
\textsuperscript{50} Id.
of acceleration clause.\textsuperscript{51} Moreover, under this interpretation Section 1-309 of Article 1 of the UCC would apply to the note.\textsuperscript{52} UCC 1-309 provides that a clause that says the holder may accelerate “at will” or “when it deems itself insecure” or uses “words of similar import” means that the holder has the right to do so only if it in good faith believes that the prospect of payment or performance is impaired.\textsuperscript{53} Under Reger Development’s interpretation of the note National City could call the note, that is, demand payment/accelerate the note, only if it believed in good faith that the prospect of payment or performance was impaired.\textsuperscript{54} Thus, when Reger Development threatened to call the note and demanded a change in the terms of the line of credit agreement, it was breaching the contract because it had no right to call the loan since Reger Development was not in default with respect to any obligations under the documents and had not suffered any economically adverse event which would have led National City to in good faith believe that the prospect of payment or performance had been impaired.\textsuperscript{55}

Reger also alleged fraud on the part of National City.\textsuperscript{56} Reger alleged essentially that National City created the impression that Reger would have the use of the loan proceeds unless it suffered some type of economic adversity, which would give National City the right to demand payment.\textsuperscript{57} Whether National City could have, upon appropriate notice, terminated the lending relationship even if Reger development had not suffered any economically adverse event was not the

\textsuperscript{57} Id.
focus of the case but is an important issue discussed *infra*.\(^{58}\) One of the most important facts that lead Reger to allege fraud was the payment of the $5,000 closing fee.\(^{59}\) As Reger argued to the court, no reasonable borrower would have paid $5,000 to enter into a line of credit if the borrower had been clearly informed that the lender had no obligation to fund the line and that if the line was funded, the lender could demand and collect payment immediately.\(^{60}\) Reger argued that National City intentionally and fraudulently created the impression that it had made a commitment to make a loan rather than an illusory promise that essentially required National City to do nothing in exchange for the payment of the closing fee.\(^{61}\) Reger was under the impression, based on it’s payment of the $5,000 closing fee, it’s obligation to provide financial information to be reviewed and approved by National City, it’s established course of dealing with National City and the signing of the loan documents that it had received a commitment from National City to make the loan, notwithstanding the language in the note quoted above.\(^{62}\) Reger might be forgiven for thinking so given that, for example as noted *supra*, the UCC provides that a note that provides that it may be accelerated “at will” etc. really does not mean that at all; what it means is that the holder may accelerate only if the holder in good faith believes that the prospect of payment or performance has been impaired.\(^{63}\) Moreover, both the UCC\(^{64}\) and the common-law\(^{65}\) impose an obligation

of good faith in the performance and enforcement of every contract, and also
prevent the enforcement of contracts based on illusory promises.\textsuperscript{66} Thus, Reger or
any borrower might reasonably conclude that the bank had to act in good faith in
order to terminate or unilaterally modify the loan.\textsuperscript{67}

B. The Problems Associated With Using Demand Notes In Commercial Loans

This Reger case illustrates the crux of the matter, which is, how should the
law balance freedom of contract and good faith in the context of a demand note
given by a commercial borrower? According to many courts, when the magic legal
words "payable on demand" appear in a note, good faith is not relevant to the
holder’s demand for payment of the note because the holder is not causing the note
to mature by demanding payment, but rather is merely demanding payment of an
obligation that technically is already mature.\textsuperscript{68} This reasoning is based on the fact

\textsuperscript{65} See Restatement (Second) of Contracts § 205 1981 (imposing a duty of good faith between the
parties to a contract).
\textsuperscript{66} Id. § 77 (illusory promises are unenforceable for lack of consideration).
\textsuperscript{67} See infra notes 216-230 and accompanying text.
\textsuperscript{68} See Nation, Recognition supra note 7 at 55-56 (noting that since the holder of a pure-traditional
demand note takes no action to mature the note, good faith is not an issue as there is no duty or act to
which the obligation of good faith could be applied); See e.g., Nat'l Bank v. Willis Denney Ford, Inc.,
154 Ga. App. 846, 295 S.E.2d 916 (1980) (The court noted that a demand instrument is due
immediately after its execution and concluded: “Thus, the only ‘duty’ under the UCC on a holder of a
demand instrument is to seek enforcement of the instrument which is on its face ‘immediately’ due
and payable within the applicable statute of limitations,”); Centerre Bank v. Distributors, Inc., 705
S.W.2d 42, 47 (Mo. App. 1985) (The court noted that a demand note is mature on its date of issue; it
stated that “the good-faith requirement of [§ 1-304] is in the performance or enforcement of a
contract or duty,” and concluded that [§ 1-304] “has no application because it does not relate to the
performance or enforcement of any right under the demand note . . . ;”); Allied Sheet Metal
Fabricators, Inc. v. Peoples Nat'l Bank, 10 Wash. App. 530, 518 P.2d 734 (1974). See also Glen D. West
and Michael P. Haggerty, The "Demandable" Note and the Obligation of Good Faith, 21 UCC L.J. 99
(1988) at 118; But see, Julian B. McDonnell, Problems with Notes: Accrual, Acceleration, and
Suretyship, 18 U.C.C. L.J. 40 at 41, suggesting that the obligation of good faith be applied to demand
notes (“But, unfortunately, the rule [stated in § 3-122 (1)(b), that a demand note is due and payable
upon its date or, if no date is stated, on the date of issue] is applied in other contexts [than the statute
of limitations]. Thus, there are cases under the code indicating that the holder may sue, foreclose, or
that courts have traditionally interpreted a pure/traditional demand note as becoming due immediately upon its execution by the maker.\textsuperscript{69} Thus, under this interpretation, the holder does not exercise any discretion in calling for payment of a demand note because the note is already due and payable.\textsuperscript{70} The policy of fairness and commercial reasonableness that underlies Article 1–309’s recognition that there should be a limitation on the holder’s/lender’s ability to exercise its discretion in a way that obviously and predictably disadvantages the borrower, does not apply to a demand note under this traditional interpretation, because the holder exercises no discretion in making the note due and payable, because the note became do as soon as it was signed.\textsuperscript{71} However, from the perspective of the borrower there is no difference at all between a demand for payment and acceleration.\textsuperscript{72} A similar issue, also illustrated by Reger, concerns how courts should interpret contract language
that states, as the note did in *Reger*, “the lender has no obligation to lend any money”.

Is this language sufficient to overcome a compelling conclusion to the contrary created by the nature of commercial loans, the payment of various fees to the lender, repayment schedules, default interest rates, the credit approval process, etc.? How are the courts, borrowers and borrowers counsel to harmonize these competing viewpoints when even the UCC seems to confuse the issue? For example, Section 3–108 (a) provides that a promise or order is payable on demand if it states that it is “payable on demand or sight, or otherwise indicates that it is payable at the will of the holder, while, Section 1–309 provides that the term providing that a party may accelerate payment at will means that the party has the power to do so only if that party in good faith believes the prospect of payment performance is impaired. The Official Comment to Section 1–309 states that this section does not apply to demand instruments or obligations whose very nature permits call at anytime with or without reason, rather it applies only to an obligation of payment which in the first instance is due at a future date. But why not simply interpret a time note with an “at will” acceleration clause as a demand note under Section 3-108(a)? Why is a time note with an “at will” acceleration clause

---

73 *See* 592 F.3d 759 at 762.
74 *See e.g.*, Wood v. Lucy, Lady Duff-Gordon, 118 N.E. 214 (1917) (Justice Cordozo states: “A promise may be lacking, and yet the whole writing may be ‘instinct with an obligation’ imperfectly expressed. If this is so there is a contract.” *Id.* 214-215. The acceptance of the exclusive agency was an assumption of its duties. We are not to suppose that one party was to be placed at the mercy of the other. Without an implied promise, the transaction cannot have such business ‘efficacy as both parties must have intended they at all events is should have.” [citations omitted]). *See discussion infra* at notes 178-215 and accompanying text.
75 *See infra* notes 141-161 and accompanying text.
76 *See* U.C.C. § 1-308(a) and 1-309.
77 *See* U.C.C. § 1-309 Official Comment.
deemed to be payable in the first instance at a future date, but a note that provides for payment “at the will of the holder” is deemed a demand note? 78

Moreover, UCC 3–117 recognizes that the obligation of a party to an instrument to pay the instrument may be modified, supplemented, or nullified by a separate agreement of the obligor and a person entitled to enforce the instrument, if the instrument is issued or the obligation is incurred in reliance on the agreement or as part of the same transaction giving rise to the agreement. 79 Article 1–201(b)(3) defines agreement, as distinguished from “contract”, as the bargain of the parties in fact, as found in their language or inferred from other circumstances, including course of performance, course of dealing, or usage of trade. 80 Thus, the agreement between the borrower and the lender as determined by the nature of commercial lending, the prior course of dealing between the parties, the borrowers planned use of the loan proceeds, as well as the specific provisions of the note and the other loan documents may be used to determine the obligation of the maker/borrower to the holder/lender. 81

Interestingly, the Seventh Circuit's opinion states that the main question in Reger is whether the note entitles National City to demand payment from Reger Development at will. 82 But, answering that question doesn’t solve the real dilemma, which is, whether National City's exercise of discretion in setting the repayment terms of the loan, especially the due date, should be subject to a general obligation

---

78 See discussion infra at notes 141-177 and accompanying text.
79 See U.C.C. 3-117.

of good faith? That is, how should we accommodate freedom of contract, and the general obligation to act in good faith in the performance or enforcement of a contract, in context of the enforcement of a demand promissory note documenting a commercial loan?

III. Analysis

A. Old And Continuing Problems

Demand Notes have always been somewhat ambiguous. Even though these notes state that they are payable “on demand” early courts decided that no demand other than the bringing of a lawsuit was necessary in order for the holder to maintain an action on the note. Subsequent courts ruled that no actual demand or commencement of legal action was necessary in order to receive payment on a demand note, citing erroneously the earlier decisions holding that commencement of the law suit constituted sufficient demand. Eventually, the rule developed that a demand note, notwithstanding its express statement that it is “payable on demand”

83 See infra notes 178-215 and accompanying text.
84 See infra notes 216-230 and accompanying text.
85 By the early 1700s, the basic rule developed that no demand other than the action brought was necessary to enforce payment of a demand note. See J. MILNES HOLDEN, THE HISTORY OF NEGOTIABLE INSTRUMENTS IN ENGLISH LAW 109 (1955). The action itself was deemed sufficient demand to make the note due and payable. Id. Ironically, subsequent courts developed the rule that demand notes were mature from the moment of their execution without either the bringing of a lawsuit or a prior demand by the holder. See, e.g., Spencer Co. v. Chase Manhattan Bank, 81 B.R. 194, 198 (Bankr. D. Mass. 1987) (“Generally, demand notes are considered due and payable immediately upon their execution with or without a prior demand.”); Jenkins v. Karlton, 620 A.2d 894, 897 (Md. 1993) (“It has long been well settled that demand notes are payable immediately, without demand.”); Shawmut Bank v. Miller, 614 N.E.2d 668, 669 (Mass. 1993) (“It is the general rule that a note unconditionally payable on demand is payable immediately without demand.”); Allied Sheet Metal Fabricators Inc. v. Peoples Nat'l Bank, 518 P.2d 734, 738 (Wash. Ct. App. 1974) (“It is elementary that a demand note is payable immediately on the date of its execution.”).
86 See supra note 85.
is in fact a mature note due and payable from the moment of its execution. As a result, the name “demand” note is itself misleading. A better name for a demand note, at least based on the traditional analysis, is “mature note”. In addition, even though Article 3 technically provides for presentment and demand for payment of notes these requirements are virtually always waived with regard to notes used in commercial lending. This anomalous and ambiguous treatment of demand notes

---

87 In fact, it would seem that a note payable “on demand” should, on the basis of logic, the plain meaning of the language used, and general business practice (indeed based on all but legal precedent), require an actual demand for payment and a breach of the obligation to pay as prerequisites to enforcement.

88 See e.g., Shawmut Bank, 614 N.E.2d at 669 (“The label 'demand note' can be somewhat misleading [and] a sort of tolerated labeling...”); Shapleigh Hardware Co. v. Spiro, 106 So. 209, 210 (Miss. 1925) (noting that the general interpretation of demand notes is “subject to the just criticism that it makes the provision that the instrument shall be payable on demand mean the opposite of what the language indicates”); WILLIAM D. HAWKLAND, HAWKLAND UNIFORM COMMERCIAL CODE SERIES § 3-122:3 (2002) (“Since there is no requirement that the holder make demand before commencing an action, the name 'demand' instrument is a misnomer.”). The application of the rule that a demand note is mature at the moment of its execution should be confined to the context for which the rule was designed, the statute of limitations. See Palmer v. Palmer, 36 Mich. 487, 491 (1877), where the Supreme Court of Michigan stated:

If the judgment [of the lower court] is correct, it can only be so because, by the terms of the contract the holder had a right to postpone the maturity of the debt as long as he chose to do so. For if the debt did not become payable until fixed by demand, and the demand was optional with the creditor, no tender could be made which would bind him, and he could keep the debt alive in spite of the debt or, for an indefinite period. If there was an infirmity in the consideration, or any defect in the binding character of the obligation, he might retain it until all testimony as lost, and defeat the defense. This is the mischief which the statutes of limitation were intended to remedy.

See Glen D. West and Michael P. Haggerty, supra note 68, at 180-09.

Other courts that have held that § 1-304 does not apply to demand notes have cited with approval the notion that § 1-304 cannot be applied to override the express terms of a contract. See, e.g., Flagship Nat’l Bank v. Gray Distribution Sys., Inc., 485 So. 2d 1336 (Fla. App. 1986) review denied, 497 So. 2d 1217 (Fla. 1986). This analysis disregards the plain language of § 1-304 which refers to “every contract or duty” (emphasis added) and violates the plain language of § 1-302, which prohibits the elimination of the obligation of good faith even by agreement of the parties.

89 See supra note 88.

90 See U.C.C. § 3-501 & 3-502 (providing for presentment and dishonor). The Official Comment to § 3-502 states: “In the great majority of cases presentment and notice of dishonor are waived with respect to notes.” Also, U.C.C. § 3-502 (a)(1) provides that a note payable on demand is dishonored if presentment is duly made to the maker and the note is not paid on the day of presentment. However, § 3-501 provides that the maker may refuse payment for failure of the presentment to comply with the terms of the instrument, an agreement of the parties, or other applicable law or rule [emphasis supplied]) U.C.C. § 3-501 (b)(3).
has led to a number of problems, as illustrated by *Reger supra*, with the enforcement of demand notes especially in the commercial lending context.\(^{91}\)

Moreover, further ambiguities surrounding the distinction between time and demand notes resulted from the definitions contained in former Article 3. Former Article 3 provided that an instrument was payable at a definite time if by its terms it was payable on or a before stated date or at a... definite time subject to acceleration.\(^{92}\) Instruments payable on demand were defined as instruments payable at sight or on presentation and those in which no time for payment was stated.\(^{93}\) These definitions resulted in a number of potential problems when a demand note was used to document a commercial loan. For example, should a note that provides that it is payable on demand, but if no demand is sooner made then in installments on specific dates, be interpreted as a time or demand note?\(^{94}\) This note does not seem to fit the earlier definition of a demand note because it contains specific repayment dates.\(^{95}\) On the other hand, the note does state that it’s payable

\(^{92}\) See, Former U.C.C. Article 3 § 109(1).

\(^{93}\) See, Former U.C.C. Article 3 § 108.

\(^{94}\) See, *e.g.*, Reese v. First Mo. Bank & Trust Co., 664 S.W.2d 530 (Mo. App. 1984) (Note providing for payment ‘on demand but if no demand be made then ...” was a time note because the requirement of an actual demand indicated that the parties did not intend the note to mature upon issue.); Shaughnessy v. Mark Twain State Bank, 715 S.W.2d 944, 950-951 (Mo. App. 1986) (note provided for payment “on demand but if no demand is made then ...” and the court held that the note was not a demand note (implication was that it was not a demand-type note but a time note) because the requirement of an actual demand meant that the parties did not intend the note to be due when executed). *Cf.* Todd v. Third Nat’l Bank, 172 Tenn. 586, 113 S.W.2d 740 (1938) (note that stated it was payable on demand but also provided for periodic interest payments; court held it was a demand note because there was no indication that the parties did not intend the note to mature upon issue). See Nation, *Recognition supra* note 7 at 65-76 (discussing this issue). Revised Article 3 has resolved this issue in 3-108(c)(3) and such instruments are demand instruments. See U.C.C. 3-108(c)(3).

\(^{95}\) See notes 92-94 *supra*. 
on demand.\textsuperscript{96} Other provisions such as default interest rates, late charges, acceleration clauses and prepayment provisions all have created problems.\textsuperscript{97} All of these provisions, which are extremely common in the commercial lending context, are inconsistent with an obligation that is already due and payable; remember many courts interpret demand notes to be due and payable from the moment they are signed.\textsuperscript{98} If a demand note is always past due how can there be a default interest rate that is higher than the stated interest rate when technically a demand note is always in default?\textsuperscript{99} How can late charges apply when payment on a demand note is always made after maturity?\textsuperscript{100} What is the point of telling the maker of a demand note that he may prepay the note without penalty? Under the traditional legal theory of demand notes, of course the maker can prepay without a penalty because the note is already mature.\textsuperscript{101} Worse would be a demand note that tells the maker he cannot prepay the note without penalty? Obviously, under the traditional legal theory of demand notes such a provision makes no sense. And, of course, an acceleration clause also makes absolutely no sense in a demand note because it is not possible to accelerate a due date that has already arrived.\textsuperscript{102}

\textsuperscript{96} See notes 92-94 \textit{supra}.
\textsuperscript{97} See Nation, \textit{Recognition} \textit{supra} note 7 at 86-88 (discussing the fact that the courts that treat notes providing for payment on demand but including specific repayment dates as time notes do so in part because of references to maturity, an increased interest rate after maturity, and/or statements that failure to pay at maturity constitute an event of default). Any reference inconsistent with an obligation due on issue may create a problem.
\textsuperscript{98} See \textit{supra} note 85.
\textsuperscript{99} Note that Revised Article 3 provides “a demand instrument is overdue at the earliest the day after demand is made” See U.C.C. 3-304. Does “after default” mean the same thing as “overdue?” It may not under the traditional reasoning that no demand need be made by the holder of a pure/traditional demand note, and thus reference to default is inconsistent with a pure demand note.
\textsuperscript{100} See \textit{supra} note 85.
\textsuperscript{101} See Nation, \textit{Prepayment} \textit{supra} note 11 at 625 (no prepayment fee would be owned for prepayment of a demand note).
\textsuperscript{102} See \textit{supra} note 85.
Finally, these earlier definitions of time and demand notes also led to confusion concerning the application of the obligation of good faith contained in former Article 1-208 (current 1-309) mentioned supra. In the commercial lending context borrowers usually plan an illiquid use of the loan proceeds. As a result, a time note would make the most sense. That is, if everything goes as planned, the borrower would be able to repay the principal and interest over time as the borrower received revenue from its use of the loan proceeds. However, the possibility that things will not go as planned puts the lender in a risky situation. If the borrower suffers economic difficulty the lender may have trouble recovering its loan. Moreover, the longer the lender waits to take action the worse the situation is likely to become from the lender’s perspective. Therefore, it’s very important to the lender that it will be able to move quickly to recover its loan if the borrowers economic situation deteriorates. This is the reason that acceleration clauses are so important and so common. Without one a lender who has used a time note providing for installment payments would have to sue for each missed installment. An acceleration clause allows the lender to bring one lawsuit and recover the entire principal and all earned interest in one action. As a way to

103 See supra notes 75-78 and accompanying text.
105 A time note gives the borrow assurance that it will have the use of the funds until maturity unless its credit worthiness declines or it allows a default to occur. See U.C.C. § 3-188 (b)(2002).
106 Id.
107 See Nation, Recognition supra note 7 at 97-100.
108 Id.
109 Id.
110 Id. See also, HEMMENDINGER, supra note 1, § 9:10.
111 See notes 107-110.
112 See notes 107-110.
further reduce risk, lenders typically condition their right to accelerate upon the occurrence of an “event of default”, which is a defined term in either the note and often other loan documents.\footnote{See, HEMMENDINGER, supra note 1, § 9:10, Nation, Recognition supra note 7 at 99-100.} At a minimum an “event of default” is defined to include a missed payment of principal or interest, but the definition typically includes much more than that.\footnote{See, HEMMENDINGER, supra note 1, § 9:10, Nation, Recognition supra note 7 at 99-100.} In fact, any event that would indicate a deterioration of the borrower’s financial position is usually defined as an event of default.\footnote{See, HEMMENDINGER, supra note 1, § 9:10, Nation, Recognition supra note 7 at 99-100.} Moreover, rather than relying on a specific definition of every event which could result in the deterioration of the borrower’s financial position most lenders also include some very broad generic language to cover anything they might have forgotten or overlooked.\footnote{See, Nation, Demand Notes supra note 104 at 385-86.} For example, typically the event of default definition includes the occurrence of any “material adverse change” in the borrower’s financial position.\footnote{Id. at 386.} Broader still is the inclusion of a provision that allows the lender to accelerate payment “at will” or “whenever the lender deems itself insecure”.\footnote{Id.}

As noted supra the UCC has placed a specific good-faith limitation on the latter type of provisions.\footnote{See supra notes 75-78 and accompanying text (discussing U.C.C. §1-309 formerly §1-208).} That is, the lender may only use these broad, generic provisions to accelerate the loan if the lender in good faith believes that the prospect of payment or performance has become impaired.\footnote{Id.} However, this
limitation did not, and under revised Article 1 does not apply to a demand note. But does this limitation apply to a note that provides that it is payable on demand, but if demand is not sooner made it is then payable in installments? If such a note were interpreted as a time note then the demand provision would be a type of acceleration clause to which the specific good-faith limitation would apply. There has been significant litigation concerning these issues. In response, some courts and commentators have categorized demand notes as either “demandable” or “pure/traditional demand” notes. The distinction is that a demandable note requires an actual demand in order to become mature, while a pure/traditional demand note does not. For example, a note like the one mentioned supra, that provides that it is "payable on demand but if demand is not sooner made in installments", has been treated by some courts as demandable. That is, such a

---

121 Id. (discuss the Official Comment to §1-209 noting that the section does not apply to demand notes).
122 Under former Article 3 it was not clear how such notes should be treated. See Former § 3-109 and § 3-108 (discussed supra at notes 92-93).
123 See, e.g., Reese v. First Mo. Bank & Trust Co., 664 S.W.2d 530 (Mo. App. 1984) (Note providing for payment “on demand but if not demand be made then …” was a time note because the requirement of an actual demand indicated that the parties did not intend to note to mature upon issue); Shaughnessy v. Mark Twain State Bank, 715 S.W.2d 944, 950-951 (Mo. App. 1986) (note provided for payment “on demand but if no demand is made then…” and the court held that the note was not a demand note (implication was that it was not a demand-type note but a time note) because the requirement of an actual demand meant that the parties did not intend the note to be due when executed); Todd v. Third Nat’l Bank, 172 Tenn. 586, 113 S.W.2d 740 (1938) (note that stated it was payable on demand but also provided for periodic interest payments; court held it was a demand note because there was no indication that the parties did not intend the note to mature upon issue). See Nation, supra note 104 at 84-90 citing cases where courts felt constraint to interpret ambiguous notes as either time or demand notes instead of adopting the demandable note option.
124 See note 123 supra.
126 See Nation, Demand Notes supra note 104 at 389.
127 See e.g. Brown v. Maguire’s Real Est. Agency, 101 S.W.2d 41 (1937), rev’d for other reasons, 121 S.W.2d 754 (Mo. 1938), where the note provided, “On demand and if no demand be made, then on the 1st day of February, 1933,” and the court stated, “We think the intent of the note is that it does not
note, unlike a pure/traditional demand note, is not mature from execution, but requires an actual demand by the holder to become mature. Moreover, since the holder exercises discretion in making an actual demand for payment and in setting repayment terms, the general obligation to act in good faith may be applied to the holder’s exercise of this discretion.

B. Recognition of Demandable Notes: A Step Toward A Solution

Recognizing the distinction between pure/traditional demand notes and demandable notes is very important to finding a solution to the problems associated with the use of demand notes in commercial lending. Distinguishing between demand, demandable and time notes is very important in order to protect the reasonable expectations of the lender/holder and the borrower/maker. That is, it mature, so that an action may be maintained upon it, prior to February 1, 1933, without demand for its payment first having been made” (emphasis added). See Exchange Nat’l Bank v. Crest Fin. Co., 203 N.E.2d 58, 60 (1964), where the note stated, “On Demand, and if no demand is made then 91 days after date,” and the court, citing Brown supra, stated, “The note in the instant case, like the note in the Brown case, could be matured prior to its due date by the making of a demand upon the maker.” For a more recent statement of the same rule see Spencer 81 B.R. at 198 (D. Mass. 1987):

Although formal demand is not required to mature an obligation evidenced by a demand note, the parties to a lending arrangement can agree that a note will become due and payable only after a formal demand is made. Moreover, the mere fact that the parties choose to label the instruments which evidence their obligations as demand notes does not automatically mean that no prior demand is required. Where the terms and conditions of a so-called demand note indicate that the parties intended the obligation to become due and payable upon the happening of a future event, the debt is not mature upon execution of the note. The obligation matures only when the agreed-upon event occurs. [Citations omitted.]

128 See supra note 85 and 127.
129 See supra note 68.
130 See supra note 125.
131 That is by characterizing a note as demandable the lender’s/holder’s right to call the loan at any time and for any reason (the holder may start the clock running on the borrower’s reasonable time to refinance at any time the holder chooses) is preserved and the borrower/maker is treated fairly because he is given a reasonable time to arrange refinancing before he is in default under a demandable note. The requirement that the holder/lender of demandable note give the borrower a reasonable time to arrange refinancing comports with general commercial practice. That is most lenders, as a matter of policy, give the maker some notice of their desire to terminate the financial relationship prior to actually requiring repayment, unless doing so would jeopardize repayment of
allows courts to avoid treating a demandable note as a time note and then applying
the specific 1–309 good faith obligation to the holder’s decision to demand
payment. Such an interpretation is in error because it misses the fundamental
distinction between time and demand (pure/traditional demand notes, and
demandable notes) obligations. A demand obligation whether pure/traditional or
demandable allows the holder/lender to decide to demand payment at any time and
for any reason and the obligation to act in good faith does not apply to the holders
decision to demand payment because the fundamental nature of a demand

the loan. During this notice period the maker often, with the help of the holder, seeks alternate
financing. See, e.g., Bank One Texas v. Taylor, 970 F.2d 16 (5th Cir. 1992); “[T]he former president of
MBank, Ed Evans, testified at trial that the bank could not simply demand payment on an
‘unreasonable basis,’ but was obligated to consider in good faith, all the facts and circumstances
before accelerating the note.” (Id. at 32); Data Indus., Inc. v. National Bank, Civil Action No. 88-1231
(HHG)(D.D.C. Sept. 26, 1989) (lender gave borrower ninety days’ notice of its intent to pay down
loan); K.M.C. Co., Inc. v. Irving Trust Co., 757 F.2d 752, 759 (6th Cir. 1985) (“Logically, at such time as
Irving might wish to curtail financing K.M.C., as was its right under the agreement, this obligation to
act in good faith would require a period of notice to K.M.C. [maker] to allow it a reasonable
opportunity to seek alternate financing, absent valid business reasons precluding Irving from doing
so.”) (James Kuharski was executive vice president and manager of secured lending activities for
Irving [Trust], and two levels above Sarokin [loan officer] in Irving’s management hierarchy.
Kuharski acknowledged that Irving owed its clients [borrowers] a duty of good faith, that it was not a policy of Irving to terminate financing without notice, and that if Sarokin believed that Irving was
adequately secured he would not have been acting in accordance with that duty of good faith to have refused without notice to advance funds to K.M.C. [borrower].”)(emphasis added). Id. at 761.
Obviously, this notice period is not given if the lender’s desire to terminate the financial relationship
is due to a good faith belief that the prospect of payment or performance has become impaired. But if
this is the case, the termination is more in the nature of an acceleration, not the result of the use of
the demand provision that is included to allow the lender to mature the note for internal
no enforcement action taken); Taggart & Taggart Seed, Inc. v. First Tennessee Bank N.A., 684 F. Supp.
230 (E.D. Ark. 1988) (bank made demand in 1984 and extended the repayment date until April
demanded payment giving maker sixty days to pay).

132 See, supra notes 94–123 (courts holding demandable notes to be time notes because their
provisions did not adhere to the definition of a demand note as being due on issue). See Nation,
Recognition supra note 7 at 84 noting that many courts have felt compelled to construe notes as
either time notes or demand notes and citing cases. However, when the parties intend to create a
demandable obligation, the application of either a time note or demand note interpretation by the
court interferes with the reasonable expectations of the parties. See Spencer 81 B.R. at 198 (quoted
supra in note 127).

133 See Nation, Recognition supra note 7 at 61-65 (noting that: “Holder’s of both demandable and
demand notes can unilaterally determine the time for payment.”) id.; Nation, Demand supra note 104
at 387-88 (same).
obligation is that it allows the holder to decide to demand payment at any time for any reason.\textsuperscript{134} However, as discussed \textit{infra}, this does not mean that every demand obligation becomes due and payable immediately upon the holder’s demand for payment.\textsuperscript{135} Moreover, it also does not mean that the general obligation of good faith (1-203 now 1-304) does not apply to the aspects of the holder’s demand for payment other than his decision of when to make the demand.\textsuperscript{136} That is, as discussed \textit{infra}, the general obligation of good faith does apply to both the way in which the holder communicates the demand and, importantly, to the holder’s setting of the repayment date applicable to the demand.\textsuperscript{137} However, while the recognition of demandable notes better reflects the commercial lending situation, problems still persist.\textsuperscript{138} In addition, while the revisions to Article 3 discussed \textit{infra} provide some clarification, they also provide some new ambiguity.\textsuperscript{139} The difficulty is trying to balance the nature of commercial lending and the likely understanding between the borrower and the loan officer with the drafting of the lender’s lawyers.\textsuperscript{140}

\textsuperscript{134} See Nation, Recognition, supra note 7 at 77-78 (“The holder’s [of a demandable note] right to demand payment should not be burdened with a good-faith obligation.”) \textit{Id}.; Nation, Demand supra note 104 at 395-96 (same).

\textsuperscript{135} See \textit{infra} notes 162-178 and accompanying text.

\textsuperscript{136} See Nation, Recognition supra note 7 at 78-80 (concluding that the general good faith obligation under 1-309 [formerly 1-203] should apply to both the setting of the amount of time the maker has to respond to the demand before the note is in default, and to the making of the demand for payment). \textit{Id}.

\textsuperscript{137} See \textit{infra} notes 162-178 and accompanying text.

\textsuperscript{138} See \textit{e.g.}, Reger 592 F.3d 759. Nation, Demand supra note 104 at 392 (“Notes used in commercial lending that provide for payment on demand have been the source of a significant amount of litigation” [notes omitted]). \textit{Id} at 400.

\textsuperscript{139} See \textit{infra} notes 141-161 and accompanying text.

\textsuperscript{140} See, \textit{e.g.}, Bottrell v. American Bank 773 P.2d 694 (S.Ct. Mont. 1989) (using demandable note analysis and intimating that a period of notice is required to be given to the maker before the note matures); Shawmut Bank v. Miller, 614 N.E.2d 668 (S.Ct. Mass. 1993) (applying demandable note analysis in the commercial lending context)(both \textit{Bottrell} and \textit{Shawmut} are discussed in Nation, Demand supra note 104 at 401-406). See also, Simon v. New Hampshire Sav. Bank, 296 A.2d 913 (Sup. Ct. N.H. 1972). (The plaintiff applied to the bank for a twenty-year construction loan repayable at the rate of $144 per month. \textit{Id}. at 375) The bank lent the borrower money; however, the mortgage
C. Revised Article 3—More Ambiguities

The drafters of revised Article 3 attempted to clear up some of the ambiguity surrounding demand notes in Section 108 (c), which provides that if an instrument, payable at a fixed date, is also payable upon demand made before the fixed date, the instrument is payable on demand until the fixed date and, if demand for payment is not made before that date, becomes payable at a definite time on the fixed date. Thus, it is clear under 3–108 (c) that a note providing that it is payable on demand but if demand is not sooner made then in installments, is a demand note and one that requires the holder to make an actual demand for payment – that is, a demandable note. In addition, 3–108 (a) provides that a promise or order is payable on demand if it states that it is payable on demand or at sight, or otherwise indicates that it is payable at the will of the holder, or does not state any time of payment. As noted, this definition unfortunately creates some new ambiguity regarding whether a time note that includes an “at will” acceleration provision

---

141 See U.C.C. § 3-108(c).
142 Id. Prior to these revisions some courts had trouble classifying notes of these types. See supra note 94.
143 See U.C.C. § 3-108(a).
should be treated as a demand note.\textsuperscript{144} Certainly one could consider such a note to be payable at the will of the holder. However, such an interpretation would seem to render Article 1 Section 309 (former 1-208) at least partially irrelevant.\textsuperscript{145}

Revised Article 3 leaves us with a conundrum: are demand notes the same as a time notes subject to at will acceleration?\textsuperscript{146} Or, to rephrase the same question with dramatically different results, are time notes subject to at will acceleration demand notes?\textsuperscript{147} If the answer to the first question is yes, then why do the courts treat these instruments so differently?\textsuperscript{148} If the answer to the second question is yes, then 1-309 is a dead letter.\textsuperscript{149} But, if we answer no to either or both questions what is the basis for that conclusion?\textsuperscript{150} That is, is there any real difference between a demand note and a time note that provides for at will acceleration, and if there is what is the nature of that difference, and how does that inform our treatment of demand notes in the commercial lending context?

\textsuperscript{144} Id.
\textsuperscript{145} See U.C.C. 1-309 Official Comments (this section does not apply to demand instruments).
\textsuperscript{146} According to the express terms of both notes, the time when the maker must pay the note is subject to the discretion of the holder. \textit{See, supra} note 72.
\textsuperscript{147} That is, according to the express language of a time note with an “at will” acceleration clause, it is payable at the will of the holder.
\textsuperscript{148} That is, the holder of a demand note may demand payment at any time for any reason, but the holder of a time note subject to “at will” acceleration may only demand payment when he in good faith believes that the prospect of payment or performance has been impaired. \textit{See supra} notes 51-55 and accompanying text.
\textsuperscript{149} That is \$ 1-309 applies to acceleration pursuant to an “at will” or similar discretionary right to accelerate, but does not apply to demand notes. Thus, if a note providing the holder with the right to accelerate “at will” is a demand note, then 1-309 would apply to nothing.
\textsuperscript{150} Perhaps there is a clue in the Official Comments to 1-309 which say that it does not apply to a demand instrument or to instruments whose very nature permits call at any time with or without reason. Rather, 1-309 applies only to an agreement or to paper which in the first instance is payable at a future date. It would be possible to argue that a note providing that it is payable on demand, but if demand is not sooner made in installments, is “in the first instance” payable at a future date (because if the holder does nothing the note is not payable until the arrival of the future date, which is essentially the same as a note subject to a possible acceleration), and thus should be subject to 1-309. \textit{See e.g.}, cases cited supra in note 94. However, I think this interpretation is incorrect. \textit{See infra} notes 162-177 and accompanying text.
Consider two Notes: one provides that it is payable on demand but if demand is not sooner made then in monthly installments of principal and interest over three years. The other provides that it is payable in 36 monthly installments of principal and interest and includes an acceleration clause that provides that the holder may accelerate at will. What is the real difference between these two notes? They both, at least according to their terms, represent a three-year loan subject to the discretion of the holder to call the note at any time. In one case calling the loan is considered a demand for payment and in the other it is considered acceleration. Is this a distinction without a difference? Legally of course there is an important difference; the holder of the second note may accelerate only if he in good faith believes that the prospect of payment or performance has been impaired pursuant to Article 1-309, while the holder of the first note, arguably has the unfettered discretion to arbitrarily and capriciously call the note at any time for any reason, good or bad, and is expressly not subject to any good faith obligation in making his decision to demand payment. Why do the policies underlying 1-309 not apply in the case of the first note? Obviously, the technical answer is because the first note is a demand note and the second note is a time note. Such an answer however simply begs the question. Should the policy underlying 1-309, which uses an obligation of good faith to limit the contracting parties freedom, apply to demand notes used in commercial lending?  

151 See U.C.C. § 1-309.
152 See supra notes 162-177 and accompanying text.
153 See, Nation, Recognition supra note 7 at 88-95 (concluding that 1-208 [1-309 today] should not apply to demand type instruments and states that: (“the right to accelerate “at will” should not be interpreted as creating ... a demand-type obligation”). Id. at 75. But, however, that does not mean that 1-304 does not apply to demandable notes. See infra notes 162-177 and accompanying text.
The drafters of the UCC and all of the state legislatures that adopted the UCC have decided, evidently, that the holder’s freedom to negotiate broad discretion to accelerate is trumped by the borrowers interest in relying on the availability of the loan proceeds unless it’s credit worthiness deteriorates. What is it about a demand note that changes this analysis? How should courts balance the interests of the borrower and the lender? In the commercial lending context an analysis based on the assumption that an obligation to act in good faith does not apply because the holder of a demand note does not exercise any discretion or take any action to mature the note because the note is always due and payable from the moment it is executed, is a dangerous fiction. In the case of a demandable note this analysis is legally, technically incorrect (such a note requires the holder to make an actual demand before the note matures), but even in the case of a pure/traditional demand note this “mature note” analysis is incorrect. The holder of a demand note, pure/traditional or demandable, always exercises discretion in deciding when to demand payment. In some contexts however, for example a check, this analysis does not create significant problems. The nature of a check is such that the funds to pay the check are always in liquid form and are required to be available at the time the check is written out. Thus, allowing the holder of a check to demand

---

154 Whether the holder may accelerate pursuant to more specific events of default without having to show that it believes in good faith that the prospect of payment or performance has been impaired is unclear. See Nation, Recognition supra note 7 at nt. 36.
155 See supra notes 85-89 and accompanying text.
156 See supra notes 127-140 and accompanying text.
157 See supra notes 68-72 and accompanying text.
158 See supra note 72.
159 See U.C.C. § 3-104 (f)
160 If the funds are not available in the account when the check is written the drawer may be liable for check fraud. See generally Thomas E. McCornin and Peter A. Frandsen, Grounding Check Kiting with
payment at any time does not create an unfair burden for the drawer. The commercial lending context, however, is very different and requires different rules.\textsuperscript{161}

D. Achieving Balance

One productive approach that I have written about in the past analyzes the discretion exercised by the holder of a demand note in demanding payment as relating to three separate events.\textsuperscript{162} The first, is the holders decision to demand payment, the second, is the actual making/communicating of the demand for payment to the maker, and the third is setting the date on which the note must be paid.\textsuperscript{163} The advantage of this approach is that it allows for the balancing of the interests of both the borrower and the lender.\textsuperscript{164} The lender’s right to demand payment at any time and for any reason is preserved, and as a result, the real distinction between time and demand type notes is preserved.\textsuperscript{165} However, the holder must make its demand to the borrower in good faith, and more importantly the lender must set the repayment date in good faith.\textsuperscript{166} In some cases it may be consistent with the observance of reasonable commercial standards of fair dealing to set the repayment date on the day immediately following the holder’s demand for

\textsuperscript{166} Id.
\end{flushleft}
payment.\textsuperscript{167} However, this would usually not be the case in the commercial lending context.\textsuperscript{168} Rather, setting repayment terms in good faith in the commercial lending context would typically require that the maker be given a reasonable time to arrange refinancing.\textsuperscript{169} This makes sense given that most commercial borrowers plan an ill liquid use of the loan proceeds.\textsuperscript{170} That is, in order for a commercial borrower/maker to pay the note in response to a demand for payment the borrower must arrange refinancing from another lender.\textsuperscript{171} Thus, to be fair to the borrower, the borrower must be given the opportunity to refinance and to be fair to the holder, the holder must have the right to call the note (start the clock running on the refinance time) at any time for any reason.\textsuperscript{172} However, it is important to note that this reasonable refinance time would be based on the time necessary for the borrower to arrange refinancing assuming the borrower is financially healthy.\textsuperscript{173} That is, at least as financially healthy as the borrower was when the loan originated.

Under this analysis, since there will usually be a gap of time between when demand for payment is made and when payment is due, the note will essentially become a time note for the period after demand for payment is made until payment becomes due.\textsuperscript{174} Therefore, all of those provisions that would be relevant to a time note, including for example, an acceleration provision would be relevant in a

\textsuperscript{167} See e.g., checks under 1-304(f) and notes 159-161 supra.
\textsuperscript{168} See supra note 131.
\textsuperscript{169} See Nation, Recognition supra note 7 at 77-84; Nation, Demand supra note 104 at 395-400.
\textsuperscript{170} See supra note 131.
\textsuperscript{171} See Nation, Demand supra note 104 at 395-400.
\textsuperscript{172} Id. at 398 (holder’s decision to demand payment not subject to an obligation to act in good faith, but an obligation of good faith does apply to the holder’s setting of the repayment terms of the note).
\textsuperscript{173} See Nation, Recognition supra note 7 at 72-73 ("... as long as the borrower is given enough time (between the lenders demand and the borrower’s obligation to pay) to arrange refinancing.") Id. at 72.
\textsuperscript{174} See e.g., Nation, Recognition supra note 7 at 74 (providing suggested repayment provisions for a demandable note that include an acceleration clause).
demand note used in the commercial lending context under this analysis.\textsuperscript{175} For example, a 3–108(c) note could be called, that is, the holder could make demand for payment, at any time, but the note would not become due and payable until the expiration of a reasonable refinance time. During this refinance time the holder would need to be protected from a possible deterioration in the borrower's creditworthiness.\textsuperscript{176} As a result, a typical acceleration provision and event of default definition would be necessary to protect the lender during this period of time.\textsuperscript{177}

It is also important to note that under this analysis 1–309 is not being applied to demand notes. The holder of a demand type note would not have to wait until the prospect of payment or performance of the note was impaired in order to call the note. However, the holder would be required to give the maker a reasonable time, refinance time, to respond to the demand for payment.

I would encourage the drafters of the UCC to strongly consider revising Article 3 to provide that the holder of a demand-type promissory note may make a demand for payment at any time and for any reason, including reasons unrelated to the maker's ability to pay, provided however that such demand for payment must be made in a commercially reasonable manner and if the promissory note was given in exchange for a loan of money for a commercial purpose, that the maker is given a reasonable time to make payment in response to the holder's demand for payment. Further, a reasonable time shall be determined in accordance with the
definition.

necessary for the borrower, if financially healthy, to arrange refinancing of the debt represented by the note.

E. Freedom of Contract

The principle of freedom of contract stands for the idea that competent parties should be free to enter into what ever bargains they desire and on whatever terms they desire within the broad parameters established by the legal system.178 These broad parameters include, *inter alia*, the requirement that the bargain entered into have a legal object, that there be no misrepresentation, duress, undue influence or mistake in the contract formation process.179 In addition, the doctrine of freedom of contract stands for the idea that a court’s job is to enforce the parties’ agreement, as long as it falls within the parameters mentioned above, regardless of whether the court believes the agreement is wise or unwise, a good deal or a bad one.180 The court’s role is not to approve or improve the contract; it is to enforce the contract the parties created.181

How is it possible to square the doctrine of freedom of contract with the interpretation of demand notes that I argue for in this paper? Again, *Reger* is a good example to consider. As the Seventh Circuit notes in its opinion, the language used

178 See John D. Calamari and Joseph M. Perillo, *The Law of Contracts* § 1-3 at 5 (2d ed. 1977) (freedom of contract is “a basic principal of contract law”); U.C.C. § 1-302 (parties may, except as otherwise provided, vary provisions by agreement).

179 See *Restatement (Second) of Contracts* Chapter 6 (mistake), Chapter 7 (Misrepresentation, Duress and Undue Influence), Chapter 8 (Unenforceability on Grounds of Public Policy). (1981).

180 See John D. Calamari and Joseph M. Perillo *supra* note 178 1-3 at 5-4 (parties’ power to contract as they please for lawful purposes remains a basic principle of our legal system.).

181 *Id.*
by National City Bank made clear that the note created a demand type obligation.\textsuperscript{182} The note said it was payable “on demand”.\textsuperscript{183} Further, the note explicitly stated that the borrower “will pay this loan in full immediately upon lenders demand”.\textsuperscript{184} Finally, there was the statement in bold capital letters, as noted, stating that:

“Notwithstanding any provision or inference to the contrary, lender shall have no obligation to extend any credit to or for the account of borrower by reason of this note”.\textsuperscript{185} I argue that the plain meaning of some of this language is overcome because it is inconsistent with other language in the note, as discussed \textit{infra},\textsuperscript{186} and because it is inconsistent with the nature of commercial lending\textsuperscript{187} and with the course of dealing between the parties.\textsuperscript{188} As a result, I argue that National City Bank could call the loan at any time and for any reason, but unless the bank in good faith believed that the prospect of payment or performance had been impaired it would be required to allow Reger Development a reasonable time to arrange refinancing before the loan would become due and payable.\textsuperscript{189}

\textbf{Freedom of contract is not absolute}.\textsuperscript{190} As noted above, there have always been limits placed on this freedom.\textsuperscript{191} Moreover, freedom of contract is not the only important principle of contract law. Protecting the commercially reasonable expectations of the parties is also important, and is reflected in the requirement that

all contracting parties must exercise discretion in good faith. The ultimate goal behind the doctrine of freedom of contract and the doctrine of good faith is to protect the commercially reasonable expectations of the parties. While usually the parties’ expectations are consistent with their written contract, in some instances the expectations of the parties are not consistent with their written contract. This situation most commonly occurs, in my experience, when the parties actually entering into the contract, for example the loan officer and borrower, have not themselves drafted, and/or read, and/or understood the terms of the written contract. The use of demand notes to document commercial loans often represents just such a situation.

A lender may legitimately desire the ability to call a loan at anytime and for reasons unrelated to the borrower’s ability to repay. In this case the bank may desire the right to call the loan, even though it was not concerned about the

---

192 See supra notes 64 and 65.
193 The U.C.C. defines good faith as “honesty in fact and the observance of reasonable commercial standards of fair dealing.” See U.C.C. § 1-201 at 20. This definition is in part objective and is intended to protect the reasonable expectations of the parties. Id. (Official Comment notes that this standard is concerned with the fairness of conduct.)
194 See e.g., cases discussed supra at 131. See generally Reid v. Key Bank, 821 F2d 9 (1st Cir. 1987) (note stated that it was payable on demand but also contained an acceleration clause, court concluded the note was a time note and could be called only if the holder in good faith believed the prospect of payment or performance had been impaired (Reid is discussed infra at notes 257-280 and accompanying text.).
195 See e.g., Reger 592 F 3d at 762-63 (borrower expressed surprise at Bank’s actions and loan office said form documents were nonnegotiable). See Nation, Demand supra note 104 at 391-395 (noting that lenders often use their superior bargaining power to include a demand repayment provision to try to “have it both ways,” create specific repayment dates to please the borrower but retain the enforcement flexibility of a demand obligation) Id. at 392.
196 See Nation, Demand supra note 104 at 392-394 (“The use of demand notes in commercial lending is illogical because most borrowers plan an ill liquid use of the loan proceeds and could not repay the loan on short notice, let alone with no notice” [notes omitted]]) id. at 392.
197 See Nation, Demand supra note 104 at 391 (lender may have internal reasons unrelated to the borrower’s financial health for calling the loan).
prospect of repayment.\textsuperscript{198} Moreover, in some cases the bank may need repayment very quickly and therefore desire the right to receive payment immediately upon demand.\textsuperscript{199} The question is not whether contracting parties in general should have the freedom to agree to such terms – they should.\textsuperscript{200} The question is, what is necessary to create such an agreement? I argue here that in the commercial lending context the phrase “payable on demand” gives the holder the right to decide to demand payment at any time for any reason, but the holder/lender must give the borrower/maker a reasonable time to respond to the demand for payment.\textsuperscript{201} In essence, the phrase “payable on demand” gives the holder/lender the right to start the clock running on the borrower’s reasonable time to respond to the demand, the refinance time, at any time and for any reason, but it is not sufficient to give the holder/lender the right to make the loan immediately due and payable upon demand.\textsuperscript{202} As noted supra, the phrase “payable on demand” may, in the appropriate context, create a demand type obligation which would become due and payable immediately upon demand for payment, but this will rarely if ever be the case in the commercial lending context.\textsuperscript{203}

The commercial lending context, as noted, typically contemplates that the borrower will use the funds in a manner that makes them ill liquid.\textsuperscript{204} That is, it would be very difficult if not impossible for the borrower to immediately repay the

loan once the borrower has invested the loan proceeds. The unthinking, route application of the doctrine of freedom of contract would suggest no sympathy for the borrower since the borrower did not spell out in the agreement what it needed. That is, the borrower should have insisted on a time note. Nevertheless, both the bank and the borrower know that the borrower cannot pay immediately upon demand. Further, Article 1-309 recognizes that, in the context of acceleration, there should be a limitation on the lenders ability to exercise its discretion in a way that obviously and predictably disadvantages the borrower; I argue by analogy that we should recognize a similar limitation in the context of demanding payment of a demand note. Moreover, this is clearly consistent with the general obligation of good faith imposed by both the common-law and the Code. However, it’s important to note that I am not arguing for the application of an article 1-309 limitation to the holders of demand notes. That is, I am not arguing that the holder of a demand note must in good faith believe that the prospect of payment has become impaired before he may call the note. Quite the contrary, I am arguing that the holder of a demand note is specifically not subject to that limitation; the holder may demand payment at any time and for any reason, but the note will not

mature immediately upon the making of a demand for payment, at least not in the commercial lending context.\textsuperscript{211}

There has always been a limit to what the terms of a contract can accomplish, under the law.\textsuperscript{212} For example, assume that a contract labeled “Sales Agreement”, is entered into in connection with a buyer’s offer to purchase a car, and that the contract contains a provision stating the following: “notwithstanding any other provision contained herein, including buyer’s payment of the purchase price, the seller has no obligation to deliver the car, to transfer title to the car to the buyer, or to deliver possession of the car to the buyer, and further, if seller does deliver the car to the buyer the seller has the right to regain possession of the car, at buyers expense, at any time.” Assume further, as in \textit{Reger}, that the buyer at the time of signing the contract paid $5,000 to the seller.\textsuperscript{213} Obviously no court should enforce such a provision. It is completely inconsistent with the transaction it purports to document. The seller may like the provision and argue freedom of contract, but freedom of contract will not save it.\textsuperscript{214} The Seventh Circuit argues that as long as the buyer, in fact, gets the car, even for a short time, the contract is enforceable.\textsuperscript{215} The Seventh Circuit is wrong.

\end{itemize}
F. Good Faith

The common law of contracts as well as the Uniform Commercial Code create obligations of good faith. For example, Article 1–304 impose a general obligation of good faith in the performance and enforcement of every contract. In addition, as discussed supra, Article 1–309 imposes a specific obligation of good faith, on acceleration pursuant to “at will” and other similar non-specific events of default. The UCC defines good faith, for all purposes other than Article 5, as: “honesty in fact and the observance of reasonable commercial standards of fair dealing”. The Official Comments make clear that fair dealing is a broad term that must be defined in context and that it is concerned with the fairness of the conduct rather then the care with which the act is performed. Further, Article 1–302 provides that the obligation of good faith may not be disclaimed by agreement of the parties’ freedom of contract notwithstanding.

Article 1–304 does not create a separate specific obligation, rather it applies to the performance or enforcement of obligations agreed to by the parties.

I argued hear that, in the commercial lending context the commercially reasonable enforcement of the maker’s obligation to pay on demand will usually require that the maker be given a reasonable time to respond to the lender’s demand for payment before the note becomes due and payable. This interpretation, in the commercial lending context, makes sense for both demand and demandable

216 See supra notes 64-65 and accompanying text.
217 See supra notes 51-54 and 70-77 and accompanying text.
218 See U.C.C. § 1-201 (20).
219 See U.C. § 1-201 (20) Official Comment.
220 See U.C.C. § 1-302 (discussed supra at notes 190-193 and accompanying text.
221 See U.C.C. § 1-304 Official Comment. See Nation, Recognition supra note 7, at nt. 21.
Even in the case of a traditional/pure demand note, the holder clearly exercises discretion when demanding payment of the note and when taking enforcement action, and the obligation of good faith should apply to the performance of that conduct notwithstanding the legal fiction that a demand note is mature from the moment it is signed. Applying this interpretation to both demand and demandable notes properly recognizes the fundamental distinction between time and demand type instruments by preserving, in the case of demand type instruments the holder’s/lender’s ability to call the loan at any time and for any reason. That is, the lender may start the clock running on the reasonable time that the maker has to respond to the demand for payment, at any time the lender desires. The maker’s reasonable expectations are protected because the maker will be given a reasonable time to arrange refinancing when the lender/holder demands payment. That is, unless the lender in good faith believes that the prospect of payment or performance has become impaired the note will not become immediately due and payable upon the holder’s/lender’s demand for payment.

As discussed supra, under this interpretation any demand type note would become, in fact, a time note once demand for payment was made, and would contain provisions such as an acceleration clause that are commonly found in time

---

222 My view of the application of the general obligation of good faith to pure demand notes has been strengthened by the Code drafters’ revision of former §Article 3-122 (1)(b) which provided that a demand note was mature on its date or date of issue for statute of limitations purposes. Today Article 3-118, does not state when a cause of action accrues and thus avoids the extraneous issues associated with former 3-122 (1)(b).

223 Id.

224 See Nation, Demand Supra note 104 at 395-400.

225 Id.

226 See supra notes 162-177 and accompanying text.

227 See supra notes 162-177 and accompanying text.
instruments. Thus, for example, a 3-108 (c) note would have three possible maturities: first, if everything went as planned it would become payable on the specific repayment dates included; second, if the holder desired repayment for reasons unrelated to the makers ability to pay the note it would become due and payable a reasonable time after the holder demanded payment; and finally if the maker’s ability to repay the loan deteriorated to the point that the holder in good faith believed that the prospect of payment or performance had become impaired, or if a specific event of default occurred then the note would become immediately due and payable via acceleration. As noted supra, under the UCC the parties are not permitted to disclaim the obligation of good faith, but they are permitted to define it as long as their definition is not manifestly reasonable. Thus the parties should define a reasonable refinance time in the note, and the courts should enforce such definition as long as it is reasonable.

G. Negotiability

One issue that may arise concerning demand-type instruments and the interpretation I argue for here is how this interpretation affects the negotiability of these instruments. To be negotiable an instrument must be payable on demand or at a definite time. Under my interpretation, demand notes used in commercial lending would not be payable until a reasonable time after demand for payment is

---

228 See supra notes 173-177 and accompanying text.
229 See e.g., Nation, Recognition supra note 7 at 79 (suggested repayment provision for a demandable note).
230 See supra notes 190-193 and 220-221 and accompanying text.
231 U.C.C. § 3-104 (a)(2).
made by the holder.\textsuperscript{232} For a 3-108 (c) demand note this interpretation does not impair certainty of time of payment because the maximum term of the loan is stated and thus it is no different with respect to time of payment than a time note subject to acceleration.\textsuperscript{233} In the case of a note that says only that it is payable on demand, an argument could be made that under the analysis argued for here the time of payment (being a reasonable time after the demand for payment is made) is uncertain and therefore the instrument is not negotiable.\textsuperscript{234} However, the argument could also be made that this amount of uncertainty is tolerable because it results from the application of the general obligation of good faith that applies throughout Article 3.\textsuperscript{235} In any event, if negotiability it is important to the parties they should specifically define a reasonable time in the instrument or use a 3-108(c) type note that provides for a definite due date unless demand for payment is sooner made.

IV. Seventh Circuit’s Analysis

The Seventh Circuit Court of Appeals upheld the District Court’s dismissal of Reger Development’s complaint for failure to state a claim.\textsuperscript{236} As noted, the Court

\begin{itemize}
\item \textsuperscript{232} See supra notes 162-178 and accompanying text.
\item \textsuperscript{233} See U.C.C. § 3-108 Official Comment (if a definite time limit is stated negotiability is unaffected).
\item \textsuperscript{234} Usually as long as the latest date when the holder may seek payment is clearly stated, the time of payment is considered definite even though under certain circumstances, the note may become payable sooner. However, under the interpretation argued for here, the later date is somewhat uncertain because it will be a reasonable time after the holder demands payment. \textit{Id.} If the parties agree to set a later date for payment the note should be considered payable at a definite time. For example, if the note provides: “this note shall become due and payable no later than 120 days after the holder’s demand for payment” the note would be payable at a definitive time.
\item \textsuperscript{235} That is, the note is clearly payable on demand, the fact that the general obligation of good faith, which applies throughout the U.C.C., applies to the setting of the repayment date is consistent with the structure of U.C.C.
\item \textsuperscript{236} Reger 592 F.3d at 767.
\end{itemize}
found that the main question in the case was whether the note signed by Reger Development entitled the lender, National City, to demand payment from Reger Development at will.\(^\text{237}\) This however is not the real issue in the case because both a pure/traditional demand note and a demandable note allow the holder to demand payment at any time.\(^\text{238}\) The real issue is whether the note in this case, a demandable note, matures immediately upon a demand for payment or whether the general obligation of good faith requires that the maker be given a reasonable time to respond to the demand before the note matures. Based on the courts examination of the note, and accepting as true the allegations contained in the complaint, the Court found that National City did indeed have the right, unfettered by any good faith obligation, to demand payment at any time for any reason; good or bad, arbitrary or capricious.\(^\text{239}\) This conclusion, while accurate, does not answer the relevant question in the case, which is whether the note matures immediately upon the making of a demand or whether the obligation to act in good faith requires the holder to give the maker a reasonable time to respond to the demand before the note matures. The court confuses the holder’s right to demand payment at anytime with the issue of whether the note matures immediately upon the making of a demand for payment. As a result, the court ultimately concludes, without ever focusing directly on the later issue, that: “viewed as a whole in a light most favorable to Reger Development, the note before us is plainly a demand instrument entitling

\(^{237}\) Id. at 762.

\(^{238}\) See supra notes 217-230 and accompanying text.

\(^{239}\) Reger 592 F.3d at 766.
National City to collect its loan whenever it wants.\textsuperscript{240} Amazingly and incorrectly under the broad standard applied to motions to dismiss for failure to state a claim, the Court found that Reger Development’s complaint failed to state a claim for relief that was plausible on its face.\textsuperscript{241} As a result, Reger Development never had the opportunity to present its case.

The court’s confusion regarding demand and demandable notes played an important part in the courts erroneous conclusions. The Court’s reasoning is based on the at least questionable, if not, erroneous traditional analysis of a pure/traditional demand note, that as noted supra indulges a legal fiction that considers the note due from the moment it is signed.\textsuperscript{242} However, the note signed by Reger Development is clearly a demandable note because it requires an actual demand by the holder in order to become mature,\textsuperscript{243} and as a result, even under the traditional analysis the Reger note did not become due upon signing, but required National City to make an actual demand for payment before the note became due.\textsuperscript{244}

The court’s confusion is evident, for example, in its discussion of the obligation to act in good faith. The court notes, that under Illinois law a covenant of fair dealing and good faith is implied into every contract, but concludes that the duty to act in good faith does not apply to a lender seeking payment on a demand note.\textsuperscript{245} This conclusion is at best accurate with regard to a pure/traditional demand note

\textsuperscript{240} \textit{Id.}
\textsuperscript{241} \textit{Id.} at 767.
\textsuperscript{242} \textit{See supra} notes 85-129 and accompanying text.
\textsuperscript{243} Reger 592 F 3d. at 762 (the note states “... Lender shall have given Borrower notice of demand for payment thereof, ...(”) \textit{Id.}
\textsuperscript{244} \textit{Id.} See also, \textit{supra} notes 130-140 and accompanying text.
\textsuperscript{245} Reger 592 F.3d at 764.
under the traditional analysis discussed supra, and is not true with respect to a
demandable note. As noted, the traditional analysis of pure/traditional demand
notes indulges a legal fiction that holds that a pure/traditional demand note is due
from the moment it is signed by the maker, as a result of this legal fiction the holder
of such a note technically needs to take no action to mature the note; the note is
already mature. Thus, in the case of a pure/traditional demand note, the holder at
least theoretically, exercises no discretion to which the obligation to act in good
faith may be applied. This is not, however, the case with a demandable note;
demandable notes do not, even under the traditional analysis, become due and
payable until the holder makes an actual demand for payment. As noted supra, the holder exercises discretion when making an actual demand for payment. The
general obligation to act in good faith found at common law and under UCC 1-304 is
designed to ensure that contracting parties exercise discretion with honesty and in a
commercially reasonable manner. As noted supra, there is another obligation of
good faith under UCC 1-309 that applies only to the exercise of discretion under an
acceleration clause. This specific obligation of good faith is not applicable to
either pure/traditional demand notes or to demandable notes because the holders

\footnotesize{246 See supra notes 85-129 and accompanying text.}
\footnotesize{247 See supra notes 130-140 and accompanying text.}
\footnotesize{248 See supra notes 85-129 and accompanying text.}
\footnotesize{249 See Nation, Recognition supra note 7 at 55-56. ("... good faith is not an issue as there is no duty or
act to which the obligation to act in good faith could be applied") Id. at 56. Cf. Nation, Recognition supra note 7 at nt. 21 (arguing that the obligation of good faith should apply to demand notes).}
\footnotesize{250 See Nation, Recognition supra note 7 at 62 ("... demandable notes require an actual demand for
payment prior to maturity and demand notes do not." [notes omitted]).}
\footnotesize{251 See supra notes 162-177 and accompanying text.}
\footnotesize{252 See supra notes 216-230 and accompanying text.}
\footnotesize{253 See supra notes 216-230 and accompanying text.}
of these instruments may decide to demand payment at any time for any reason.\textsuperscript{254} That is, demand type instruments (pure/traditional demand notes and demandable notes) represent obligations whose very nature permits demand for payment to be made at any time and for any reason.\textsuperscript{255} However, as noted, the fact that that the specific obligation of good faith under 1-309 is not applicable to demandable notes does not mean that the general obligation to act in good faith under 1-304 does not apply to demandable notes.\textsuperscript{256}

The Court’s confusion is further illustrated by the fact that in its discussion of good faith it incorrectly cites cases discussing pure/traditional demand notes rather than demandable notes, and cites cases discussing the specific obligation of good faith under 1-309, rather than the general good faith obligation under 1-304. For example, the Court cites \textit{Edgewood}\textsuperscript{257} for the position that while Illinois law generally holds that a covenant of fair dealing and good faith is implied into every contract … the duty to act in good faith does not apply to a lender seeking payment of a demand note.\textsuperscript{258} The \textit{Edgewood} court stated, in the context of reviewing jury instructions: “... if, with proper instructions, the note was found to be a demand instrument, ... there would be no "good-faith" issues”.\textsuperscript{259} For this statement the \textit{Edgewood} Court

cited Shawmut Bank v. Miller\textsuperscript{260} \textsuperscript{261} But Edgewood's citation to Shawmut makes clear that Edgewood's statement is in reference to pure/traditional demand notes and not demandable notes as the following quotes from the Shawmut decision explain: “Not only is the balance due on a traditional [pure] demand note collectible without demand, but also a holder of such a note may determine to collect the balance due for any reason, good or bad.”\textsuperscript{262} “Good faith is not a condition of a holder's decision to collect the amount due on a demand note.”\textsuperscript{263} The Shawmut court cites cases from various jurisdictions and concludes with the following: “These opinions reject any claim that 1-208 [1-309 today], imposes a duty of good faith in the enforcement of the obligation of a demand note.”\textsuperscript{264} “The Official Comment to 1-208 makes clear that 1-208 was not intended to apply to demand notes.”\textsuperscript{265} However, this part of the Shawmut decision is limited to the specific good faith obligation under 1-208 [1-309] and does not concern the general good faith obligation under 1-203 [1-304 today].\textsuperscript{266} The Court in Shawmut notes at footnote 7 that no claim concerning the general obligation of good faith under the UCC 1-203 [1-304 today] was made by the plaintiffs in the case:

“The Millers do not rely on 1-203 [1-304 today] which states a general obligation that ‘every contract or duty within this chapter imposes an obligation of good faith in its performance or enforcement’.”\textsuperscript{267} Although Shawmut notes that there is authority

against applying a general obligation of good faith to the decision of the holder of a demand note to demand payment, this does not concern the issue of whether the general obligation of good faith applies to the determination of how soon after actual demand for payment the note matures. Further the court cites a decision from Maine that applies the general obligation of good faith in the context of a demandable note.

It is clear from the opinion in Shawmut that the note in that case was a demandable note and not a pure/traditional demand note. In Reger the Court discusses the fact that the Reid court applied the specific obligation of good faith found in 1-309 [formerly 1-208] to a note stating that it was payable "on demand", because it found that the note was actually a time note. The Reid note provided that it could be called only after a specified date or pursuant to certain events of default. The Shawmut Court noted that the note in that case also defined events of default, but in contrast to Reid the Shawmut Court expressly states that those provisions do not change its "demand" nature. Thus, the Shawmut note was not a time note, as was the case in Reid, and as a result the specific obligation of good faith under 1-208 [1-309] did not apply in Shawmut. The Shawmut note defines events of

274 Shawmut 614 N.E. 2d at 671.
default and upon the occurrence of one of these events the note would either automatically or at the option of the holder become immediately due and payable.275 Thus, unlike a pure/traditional demand note, this note was not due and payable from the moment it was signed. Rather, this note would become due and payable as a result of an actual demand being made by the holder or as a result of the occurrence of one of the listed events of default.276

Both Shawmut and Edgewood stand for the proposition that the specific obligation of good faith contained in 1–309 applies only to time notes.277 Further, these decisions also stand for the proposition that the general obligation of good faith under 1-304 does not apply to a holder’s decision to demand payment of either a pure/traditional demand note or a demandable note.278 That is, the very nature of demand instruments, either pure/traditional or demandable, allows the holder to decide to demand payment for any reason and that any time. It does not follow however, that, especially in the case of a demandable note, the note must be paid immediately upon demand.279 Neither case stands for the proposition that the general obligation of good faith does not apply to the way in which the holder makes

the required actual demand for payment or to the holder’s setting of the terms of repayment.\textsuperscript{280}

The Seventh Circuit’s confusion is also illustrated by its reference to the Official Comments to UCC 1–309 [formerly 1-208].\textsuperscript{281} As noted above, the Official Comments state that that this section applies only to an obligation of payment or performance, which in the first instance is due at a future date.\textsuperscript{282} Clearly, the specific obligation of good faith contained in 1-309 is not applicable to either a pure/traditional demand note or to a demandable note.\textsuperscript{283} But, the court’s reference to the 1-309 comments tells us nothing, as noted \textit{supra}, regarding whether the general obligation of good faith found in 1–304 applies to a demandable note.\textsuperscript{284} Moreover, it is clear from both the provisions of the \textit{Reger} note quoted by the court as well as the courts analysis regarding various provisions of the note that Reger Development alleges are inconsistent with a demand note, that the \textit{Reger} note is a demandable note and not a pure/traditional demand note.\textsuperscript{285} For example, in discussing a default interest rate provision, providing for a 3% increase in the rate after default, and a prepayment clause, allowing the borrower to pay down all or a portion of the note \textit{before it is due} the court concludes that it is not persuaded by the suggestion that these references to due dates and default somehow overpower the

\textsuperscript{280} \textit{Id.} at 672 (“The summary judgment record is barren of any evidence tending to show the bank’s post-demand bad faith in the fixing of, and insisting on, the terms under which the bank required payment of the Miller’s [Maker’s] obligation under the note. We therefore need not consider whether good faith is a necessary element of the setting of the terms of a demand for payment when dealing with a demand note having the special qualities [being a demandable note] of the note in this case”).

\textsuperscript{285} \textit{Reger} 592 F.3d at 765.
repeated explicit contract language setting forth the lenders right to demand payment at any time.\textsuperscript{286} The reason for the Court's conclusion is that a bank may create a note that specifies a future payment date that will apply unless a demand for payment, \textit{an actual demand for payment}, is sooner made.\textsuperscript{287} The court is clearly describing a demandable note.\textsuperscript{288}

Moreover, based on the language from the \textit{Reger} note quoted by the court the note is obviously a demandable note and not a pure/traditional demand note. The court quotes the following provisions from the note:

\begin{quote}
FAILURE TO PAY ON DEMAND. Notwithstanding any other provision set forth in this Note, if (a) any principal owing under this Note remains unpaid after Lender shall have given Borrow \textit{notice of demand for payment thereof} [emphasis supplied] or after the commencement of any proceeding under any bankruptcy or insolvency laws by or against Borrow or (b) any accrued Interest under this Note remains unpaid after the due date of that Interest, then, and in each such case, all unpaid principal of this Note shall bear Interest at a rate equal to three percent (3\%) per annum above the rate that would otherwise be applicable.\textsuperscript{289}
\end{quote}

This provision clearly requires the holder of the note to give the maker/borrower "notice of demand for payment".\textsuperscript{290} Thus, this note is clearly a demandable note, and did not become due at the moment the maker signed it.\textsuperscript{291} This note would become

\begin{footnotes}

\item[287] Id. ("A bank that wishes to call the note can specify some future date on which it needs payment as a 'due date'.")
\item[288] See Shammut 614 N.E. 2d. at 671 (noting that a "garden-variety demand note" (a traditional/pure demand note) becomes due and payable at its inception and no demand is needed to make it due and payable, but if a note's other provisions would be superfluous under this traditional analysis then the court should recognize the parties right to create a note that only becomes mature upon the making by the holder of an actual demand for payment except when certain events occur).
\item[289] Reger 592 F.3d at 762.
\item[290] Id.
\item[291] See supra note 288.
\end{footnotes}
due sometime in the future after the holder made an actual demand for payment to the maker.\textsuperscript{292} Moreover, the fact that National City could give notice of demand at any time does not necessarily mean that the note would become due immediately upon the receipt by Reger Development of the notice of demand.\textsuperscript{293} This is clearly the case here notwithstanding an earlier provision of the note quoted by the court, which says that the borrower will pay this loan in full immediately upon lenders demand, because the paragraph quoted above says \textit{notwithstanding any other provision set forth in this Note} and therefore takes precedence over the conflicting provision.\textsuperscript{294}

Under the “Failure To Pay on Demand” provision set forth above, the note had three possible maturities: first, failure of the maker to pay after appropriate notice of demand had been given; second, upon commencement of any proceeding under any bankruptcy or insolvency laws by or against the borrower; and finally upon failure of borrower to pay any interest when due.\textsuperscript{295} Under the first possible maturity, the phrase “notice of demand” certainly seems to suggest that there would be a period of notice, that is, a period of time between the making of the demand for payment and the maturity of the note.\textsuperscript{296} A suggestion that is significantly strengthened by the understanding of the contracting parties and by their course of dealing.\textsuperscript{297} Thus, clearly summary judgment was not appropriate.

\item Reger 592 F.3d at 763 (Kevin Reger “expressed surprise” at the banks actions).
\end{enumerate}
\end{footnotesize}
The Court’s ultimate conclusion in this case is surprising given the fact that in its opinion the Court recognizes the idea that specific events of default may neuter contractual language describing a loan is payable on demand. The Court notes that cases from other jurisdictions (Reid for example) describe instruments with provisions that look out of place in a demand note and these courts’ conclude that such notes are not demand notes. However, the Court incorrectly assumes that the only impact of language inconsistent with a pure/traditional demand note is that it may cause the note to be treated as a time note. The Court fails to appreciate the significant difference between a demand note and a demandable note. Thus, the only provision that seems relevant to the Court in this connection is an acceleration clause, and the court states that the National City note does not contain an acceleration clause and therefore dismisses the significance of the provisions of the note that are inconsistent with a pure/traditional demand note, and the fact that the context, and the course of dealing between the parties are also inconsistent with a pure/traditional demand note. Finally, the court failed to recognize that the National City note does contain at least the semblance of an acceleration clause. That is, based on the paragraph quoted above, it would seem that this note would become instantly mature upon the commencement of any insolvency or bankruptcy proceedings by or against the maker, even in the absence of a demand for payment being made by the holder and perhaps immediately upon the failure of the maker to

make timely interest payments. In the end, the courts analysis is confused, erroneous, and very surprising, coming in the context of a dismissal for failure to state a claim. Finally, the Courts analysis regarding the illusory nature of the agreement is also in error. The Court states that a peppercorn may be considered sufficient consideration to support a contract in a court of law, a true but not very relevant statement. The important issue in the instant case is that at the time the loan documents were signed Reger Development did not even receive a peppercorn from National City if the language “notwithstanding any provision or inference to the contrary, lender shall have no obligation to extend any credit to or for the accountant borrower by reason of this note” is applied as written. Reger Development received exactly nothing. As a result, at the time the loan documents were signed there was no consideration and therefore no contract was created. The Court is correct in reasoning that once the loan was funded a contract existed between the parties, but that contract is implied-in-fact and based on the actions of the parties and not on the written loan documents. That is, the reasonable interpretation of the parties’ conduct (i.e. National City giving money to Reger Development) is that National City made a loan to Reger Development. However, under this analysis the issue becomes what the terms of this implied contract are – an issue the Court completely misses. The terms of the contract are determined by the agreement between the parties at the time of contracting, that is, at the time the funds

were actually given to Reger Development. Thus, the loan documents represent only one source of relevant information for determining the agreement of the parties. Other perhaps more relevant sources of information would include the understanding of the parties at the time the loan was actually funded which would be determined in part by objective factors such as the parties’ understanding of the borrowers use of the loan proceeds, as well as the parties’ prior course of dealing.\textsuperscript{310} Moreover, the principles underlying the obligation of good faith, the observance of reasonable commercial standards of fair dealing, would also be relevant in determining the terms of the parties implied contract.\textsuperscript{311} Again, the Court’s granting of summary judgment in this case was clearly in error.

IV. Conclusion

Commercial borrowers often invest the loan proceeds in such a way that the funds are no longer liquid and cannot quickly be returned to a cash state.\textsuperscript{312} Because of this, the needs of commercial borrowers are often fundamentally at odds with the traditional legal interpretation of demand notes that indulges the legal fiction that such notes are due from the moment they are signed.\textsuperscript{313} As a result, when a demand note is used to document a commercial loan there is often a pervasive disconnect between the needs of the borrower and the traditional legal interpretation of demand notes.\textsuperscript{314} I argue hear that this misunderstanding does not occur between

\textsuperscript{310} Id.

\textsuperscript{313} See supra notes 1–15 and accompanying text.
\textsuperscript{314} See supra notes 68–78 and accompanying text.
the actual negotiating parties, that is, between the loan officer and the borrower, rather, I argue that the disconnect results from the drafting efforts of lenders’ counsel and in fact is most likely to occur, in my experience, when a lenders’ form documents are used to document a loan.315

The Reger case is a good example of this phenomenon. In that case, the borrower a real estate developer (funds invested in real estate development cannot be easily returned to cash before the projects completion) signed a demand note, and also promised to pay, and in fact paid, a $5000 closing fee notwithstanding language in the documents that said the lender had no obligation to make any loan of any kind for any reason whatsoever to the borrower.316 In the Reger case, the bank’s form documents simply do not make sense with the underlying transaction.317 Moreover, this is usually the case when a demand note is used to document a commercial loan, and the traditional interpretation of demand notes is applied by a court to determine the rights and obligations of the parties.318 I argue here that when a court is faced with such a situation, Article 3 provides the tools necessary for the court to adopt a reasonable interpretation of demand type notes that protects the interests of both the lender and the borrower.319

Article 1–304 imposes a general obligation of good faith on the performance and enforcement of every contract under the Code.320 Article 1 also defines good faith as honesty in fact and the observance of reasonable commercial standards of

315 See e.g., Reger 592 F.3rd discussed supra notes 19-67 and notes 236-311.

fair dealing.\textsuperscript{321} Further 1–302 provides that the parties are free to vary the provisions of the UCC by agreement, except, \textit{inter alia}, the obligation of good faith,\textsuperscript{322} while article 3–117 says specifically that the obligation of a party to an instrument may be modified, supplemented or nullified by a separate agreement of the obligor and the person entitled to enforce the instrument, if the instrument is issued in reliance on the agreement or as part of the same transaction giving rise to the agreement.\textsuperscript{323} Article 1 defines agreement broadly as the bargain of the parties in fact as found in their language or inferred from other circumstances.\textsuperscript{324} Finally, the use of the phrase “at will” in both Article 3–108 (c) and Article 1–309 draws a linkage between demand notes used to document commercial loans and “at will” acceleration clauses, the enforcement of which the Code restricts to instances where the lender in good faith believes that the prospect of payment or performance has been impaired.\textsuperscript{325}

In this article I argue that courts should use these tools to interpret demand notes used in commercial lending as having at least two and often three possible maturities.\textsuperscript{326} First, a note that simply provides that it is payable on demand could become mature a reasonable time after demand for payment was made by the lender and the lender would be free to make demand for payment at any time, for any reason and the decision to demand payment would not be subject to any good

\textsuperscript{321} \textit{See supra} note 218 and accompanying text.

faith obligation.\textsuperscript{327} But such a note would not become immediately due and payable upon demand by the lender unless the lender in good faith believed that the prospect of payment performance had been impaired.\textsuperscript{328} Rather, the note would become due and payable a reasonable time after the demand for payment was made.\textsuperscript{329} If a 3–108 (c) type note is used, one that provides for scheduled payments of principal and interest if no demand is made, then an additional possible maturity would be upon the specific date or dates referred to in the agreement assuming no prior demand was made and the borrowers credit worthiness had not deteriorated during the life of the loan.\textsuperscript{330} I argue that such an interpretation properly balances freedom of contract and good faith, and protects the reasonable expectations of both the lender and the borrower.\textsuperscript{331}
