Abstract for “Liberal Justices’ Reliance on Legislative History: Principle, Strategy, and the Scalia Effect”

This article conducts an in-depth examination of Supreme Court Justices’ reliance on legislative history during the Burger, Rehnquist, and early Roberts eras. In doing so, it makes two important contributions to current statutory interpretation debates.

First, the article presents a powerful case against the conventional wisdom that legislative history is a “politicized” resource, invoked opportunistically by federal judges. The premise that judges regularly rely on legislative history to promote their preferred policy positions—if true—should find ample support in the majority opinions of liberal Supreme Court Justices construing liberal (pro-employee) labor and civil rights statutes. By analyzing all 320-plus majority opinions in workplace law authored by eight liberal Justices from 1969-2006, the authors establish that legislative history reliance is actually associated with a constraining set of results. When these eight liberals use legislative history as part of their majority reasoning, they do so to justify a higher proportion of their pro-employer outcomes than their pro-employee decisions. The authors then review individual majority opinions to demonstrate how this surprising pattern of reliance is based on neutral doctrinal considerations. Liberal Justices use legislative history to illuminate the existence and contours of complex statutory bargains that often favor conservative or pro-employer positions. The authors consider alternative explanations, premised on the institutional factor of who assigns majority opinions and also the instrumental possibility that liberals withhold use of legislative history in “minor” cases to enhance its value in more important decisions. They conclude, however, that Justices Brennan, Marshall, Souter, Stevens, and others are willing to follow so frequently a legislative history trail leading away from their presumed ideological preferences mainly because they have invoked this interpretive resource in principled fashion.

The article’s second major contribution is to identify and analyze the Scalia Effect that has arisen with respect to liberal Justices’ use of legislative history since 1986. In the face of Justice Scalia’s fervently expressed opposition to legislative history, liberal Justices have opted not to rely on that resource in a series of pro-employer majorities that Scalia joins. One result of the liberals’ strategic restraint is to make their use of legislative history in remaining (mostly pro-employee) majority opinions appear more ideological than was true before Scalia joined the Court. The authors also show that liberal justices have special reasons for acting strategically in this regard. When liberals rely on legislative history, Justice Scalia is significantly less likely to join their majority opinions even when he votes on their side; he also is significantly less likely to vote for the majority result when these liberals rely on legislative history than when they do not. Intriguingly, Justice Scalia’s strong resistance to legislative history usage does not extend to majorities authored by his conservative colleagues. Scalia seems prepared to give these conservative colleagues a free ride: he is every bit as likely to join their majorities, or vote for their results, when they rely on legislative history as when they do not.
INTRODUCTION

Critics of legislative history have long maintained that it lacks neutrality as an interpretive resource. Unlike the dictionary or the canons of construction, committee reports and
floor statements are produced by partisans—actors with a stake in the legislative contest to which they are contributing. Legislative history skeptics worry that this political dimension creates a risk of judicial misuse on two levels. Members of Congress or their staffs may craft statements in the legislative record with an eye toward manipulating or misleading judges as to the meaning of text. Moreover, judges reviewing the abundant legislative commentary from bill proponents and opponents may selectively invoke portions of this record to help justify their preferred policy result.

Concerns over the politicized nature of legislative history reliance\(^1\) have special resonance with respect to federal labor and employment law. Congress’s legislative goals in the field of workplace law have been essentially unidirectional—to augment employee protections and thereby improve terms and conditions of employment.\(^2\) From the late 1930s through the early 1990s, liberal coalitions in the House and Senate coordinated passage of more than a dozen major employee protection statutes.\(^3\) Leading members of these enacting coalitions were well

\(^1\) Judicial reliance on legislative history also has been criticized as conceptually incoherent (the legislature’s intention or purpose is at best deeply muddled and at worst unknowable) and constitutionally inadequate (on separation of powers and legislative supremacy grounds). Those criticisms, which have been discussed elsewhere in some detail, are not addressed in this article. See generally William N. Eskridge, Jr., Dynamic Statutory Interpretation 222-224, 230-238 (1994); Abner S. Greene, The Missing Step of Textualism, 74 Fordham L. Rev. 1913, 1924-1935 (2006); James J. Brudney, Congressional Commentary on Judicial Interpretation of Statutes: Idle Chatter or Telling Response?, 93 Mich. L. Rev. 1, 41-47 (1994).

\(^2\) Congress’s agenda in the workplace law arena has on occasion departed from this redistributive focus. Provisions in the Taft-Hartley and Landrum Griffin Acts restricting employee rights to picket and union rights to impede commerce reflect congressional intent that was primarily conservative rather than liberal as we are using those terms. Nonetheless, Congress’s workplace law statutes have overwhelmingly sided with employees in regulating conflict between employer and employee interests. By contrast, federal legislation in certain other areas—such as securities law or tax law—is less easily classified as liberal or conservative. See, e.g., Margaret v. Sachs, Judge Friendly and the Law of Securities Regulation: The Creation of a Judicial Reputation, 50 SMU L. Rev. 777, 784-91 (1997) (discussing pro-regulation nature of 1933 Securities Act and 1934 Securities Exchange Act); Michael A. Perrino, Fraud and Federalism: Preempting Private State Securities Fraud Causes of Action 50 Stan. L. Rev. 273, 280-98 (1998) (discussing anti-regulation nature of 1995 Private Securities Litigation Reform Act); Bernard Wolfman et al., The Behavior of Justice Douglas in Federal Tax Cases, 122 U. Pa. L. Rev. 235, 286-89, 320-25 (1973) (analyzing ways in which pro-regulatory nature of federal tax law is viewed by one Justice as at times liberal and at other times conservative).

\(^3\) These statutes include the National Labor Relations Act and the Fair Labor Standards Act in the 1930s, the Portal to Portal Act in the 1940s, the Equal Pay Act, Title VII, and the Age Discrimination in Employment Act in the 1960s; the Occupational Safety and Health Act and the Employee Retirement Income Security Act in the 1970s; the
situated to include statements that purported to explain Congress’s specific intentions or general purposes, thereby imbuing key legislative history materials with a liberal spin.

In addition, the Supreme Court that ultimately interprets and applies federal labor and employment laws has been heavily influenced by liberal Justices since the early 1960s. The voting records of Justices Brennan, Marshall, Stevens, and Souter, among others, reflect a broad tendency to support the legal positions taken by individual employees, racial minorities, women, unions, and retirees—principal beneficiaries of Congress’s employee protection statutes. When authoring majority opinions, these justices might well be inclined to adopt Judge Leventhal’s mischievous perspective and pick out their friends from among the crowded assortment of statements contained in the legislative record. Such “friendly” pro-employee statements are likely to be especially visible or salient in the legislative record accompanying workplace law statutes.

In short, the premise that federal judges are regularly or systemically using legislative history to promote their preferred policy positions—if true—should find ample support in the majority opinions of liberal Justices construing liberal statutes. This article explores the assumption that liberals on the Court will use legislative history to help justify liberal or pro-employee results significantly more often than to support conservative or pro-employer results. It does so by focusing on more than 300 majority opinions authored in the field of workplace law by eight liberal Justices who have served for at least ten years on the Burger, Rehnquist, or Roberts Courts. Not surprisingly, we found that the eight liberals—Justices Brennan, White, Polygraph Protection Act and the Worker Adjustment Retraining Notification Act in the 1980s, and the Americans with Disabilities Act and Family and Medical Leave Act in the 1990s. Many of these regulatory schemes have been updated and expanded by Congress as additional enactments.

4 See Patricia Wald, Some Observations on the Use of Legislative History in the 1981 Supreme Court Term, 68 IowA L. Rev. 195, 214 (1983) (quoting her colleague Judge Leventhal’s observation that citing legislative history is akin to “looking over a crowd and picking out your friends”).

5 See Part I B., infra, discussing classification of Justices as liberal or conservative for our purposes, based on the Spaeth Supreme Court database.
Marshall, Blackmun, Stevens, Souter, Ginsburg, and Breyer—rely on legislative history as a group far more often than their eight conservative counterparts.⁶

More surprisingly, however, we determined that for the eight liberals, the relationship between pro-employee outcomes and legislative history usage is not significant.⁷ If anything, legislative history reliance is associated with a somewhat neutralizing set of results. When liberal Justices use legislative history as part of their majority reasoning, they do so to help justify more than half of their pro-employer opinions for the Court but just under one-half of their pro-employee outcomes. Further evidence of this moderating association is that majority opinions authored by liberal Justices reach liberal outcomes 30 percent more often than conservative results when not relying on legislative history, but the liberal-conservative outcome differential declines to 21 percent when the majority opinion’s reasoning includes legislative history. A link between legislative history reliance and more moderate outcomes is observable in the aggregated majority opinions of the liberals as a group, and also in the majorities authored individually by Justices Brennan, Marshall, White, Blackmun, Stevens, and Souter.

On the other hand, we found that since 1985, this moderating association has waned among the cohort of liberal Justices. During his final years on the Court, Justice White—who had previously relied on legislative history disproportionately to help justify pro-employer results—invoked legislative history in only rare instances. In addition, the two most recently appointed liberals, Justices Ginsburg and Breyer, have reached pro-employee results in majorities that rely on legislative history substantially more often than in majorities that do not.

⁶ The eight conservative Justices with at least ten years of service between 1969 and 2006 are Justices Burger, Stewart, Powell, Rehnquist, O’Connor, Kennedy, Scalia, and Thomas. We also discuss conservative Justices’ reliance on legislative history in certain settings, in an effort to illuminate or contextualize findings regarding the eight liberals. Our focus, however, is on the liberal Justices and how they make use of the legislative history that accompanies and explains this abundant assortment of pro-employee statutes.
⁷ We refer here to statistical significance, as described infra at note 46.
Our data for the eight conservative Justices is consistent with the notion that legislative history reliance is increasingly associated with the justices’ preferred policy outcomes. Use of legislative history by the “older” conservatives—Justices Burger, Stewart, and Powell—is linked to more liberal or pro-employee results; this again is a distinctly moderating association, also observable in the pre-1986 majorities authored by Justice Rehnquist. By contrast, legislative history reliance by two of the “newer” conservatives—Justices O’Connor and Kennedy—is strongly associated with results favorable to employers.8

We thus have uncovered evidence to suggest that both principle and politics may be at work in the way the liberal Justices rely on legislative history, and we examine some implications of both sets of findings. With respect to the role of principle, a key question is why legislative history accompanying liberal, pro-employee statutes ends up being relied on so often by liberal Justices to support conservative, pro-employer outcomes. Based on a review of some sixty pro-employer majority opinions authored by the liberal group of justices, we have identified three categories of legislative history usage regularly invoked to defend conservative results when construing the terms of a liberal statute.

First, liberal Justices use legislative history to amplify or unpack the meaning of employer defenses or exemptions built into the text. Second, the liberals rely on legislative history to establish the existence or details of a compromise on the issue being reviewed. Finally, they use legislative history to demonstrate that the legal position identified with employees and their supporters has overreached in its claims.

---

8 Two other newer conservatives, Justices Scalia and Thomas, virtually never rely on legislative history when writing majority opinions. Their occasional reliance on legislative history in dissents is associated with pro-employer results. The two newest conservatives, Chief Justice Roberts and Justice Alito, have not been on the Court long enough to allow for detailed analyses regarding legislative history reliance.
In our view, the liberal Justices’ repeated use of these three categories to help explain pro-employer outcomes reveals judicial use of legislative history to be deliberative and coherent in important ways that legislative history skeptics have not adequately recognized. We consider possible alternative explanations for the moderating tilt associated with liberals’ legislative history usage, including the impact of majority opinion assignments and the prospect that liberals may be pursuing complex strategic motives when using legislative history in these settings. Although such factors may play a supplemental role, we conclude that they do not detract from the importance of the three principled categories.

With regard to the possible role of politics, an important inquiry is why liberal and also conservative Justices after 1985 have relied on legislative history more often to justify or explain what would seem to be their preferred policy results. We suggest two ways in which Justice Scalia’s fervently expressed opposition to legislative history as a resource may have shifted the institutional dynamic for legislative history usage by stimulating strategic behavior on the part of some of his colleagues. This Scalia Effect may make other Justices appear more ideological in their approach to legislative history, primarily because of the circumstances in which liberals opt not to invoke the resource, although also because of when conservative Justices choose to use it.

First, liberal Justices seeking to retain the allegiance of a colleague have declined to invoke legislative history in a subset of more than twenty pro-employer majority opinions joined by Justice Scalia. It is striking that for three-fifths of these pro-employer majorities eschewing legislative history, the winning party’s briefs include—and often feature prominently—legislative history arguments. By not resorting to readily available legislative history justifications, liberal Justices may be securing Justice Scalia’s full endorsement for these
decisions; their remaining majorities that do rely on legislative history consequently take on a more distinctly pro-employee complexion.

Second, conservative Justices aware of Justice Scalia’s outspoken resistance may confine their use of legislative history, invoking it primarily to anticipate or counter legislative history arguments advanced by liberal Justices in dissent. Virtually every non-unanimous majority opinion favoring employers in which a conservative justice relies on legislative history also includes legislative history reliance by a dissenting liberal Justice. Justice Scalia joins all but one of these pro-employer majorities, suggesting he may be giving his conservative colleagues a free ride on their use of legislative history in these circumstances.

Part I summarizes the current debate over whether legislative history is inherently unreliable because of its political nature. Part I also identifies the Supreme Court dataset we use to examine the role played by legislative history. Part II presents our central findings, addressing the ideological tenor of legislative history usage by the Court as a whole, by the liberal cohort of justices, and by the liberal Justices individually. Part III pursues key aspects of our findings in doctrinal and behavioral terms, analyzing certain illustrative majority opinions and invoking social science and institutional perspectives on how the Court operates.

I. THE DEBATE AND THE DATASET

A. Legislative History as a Politicized Asset?

1. Opportunism at the Creation Stage

Pivotal players in the lawmaking process—congressional staff and lobbyists as well as members—generally recognize that judges are willing to rely on legislative history materials as an aid to construing text. Such materials are produced by a relatively small number of
participants, operating outside the more formal and costly processes required for the enactment of statutory language. In this setting, concerns have arisen that legislative history will too often include explanations or assertions supporting a policy outcome that was not addressed or achieved or even attainable in the text itself.\(^9\)

Legal academics and judges describing such public choice-related concerns refer to two troubling institutional features of legislative history creation. One is that congressional committees—the source of the most influential legislative history—tend to be preference outliers. Their reports advance general positions and specific constructions that are more extreme or less balanced than what the hypothetical median legislator believes is contained in the accompanying text.\(^10\) The other is that congressional staffers—the authors of virtually all legislative history—understand that members rarely read the committee or floor commentaries drafted by their underlings. Accordingly, staffers can revel in the “heady feeling”\(^11\) that stems from having subtly altered the meaning of textual arrangements previously negotiated by the legislators.\(^12\)

The public choice account of opportunistic behavior by key legislative history producers has not gone unchallenged. Some scholars suggest that committee-approved legislation

---

\(^12\) See generally Eskridge et al., supra note 10, at 311; Nicholas S. Zeppos, Legislative History and the Interpretation of Statutes: Toward a Fact-Finding Model of Statutory Interpretation, 76 Va. L. Rev. 1295, 1310 (1990).
generally reflects the policy preferences of the chamber as a whole, and others contend that committee actors are adequately constrained by whistleblowing and its related consequences. Members know they must depend on colleagues’ representations at the committee stage because the accuracy of committee-based information is integral to moving Congress’s agenda. Moreover, as repeat players with long-term reputational interests, committee leaders know that their statements about a bill’s specific or general objectives will be monitored by minority committee members and also by the chamber majority.

As for the role of staff, it may be more reasonable to view them primarily as faithful agents implementing their bosses’ directives. Congressional staff are recruited and hired for their congruence of viewpoints and loyalty as well as their expertise and judgment, and committee staff typically reflect or reinforce their member’s positions and values. Further, considerations of political accountability, sharpened by the prospect of embarrassing media coverage, effectively encourage members to oversee staff performance in this area.

Still, even absent evidence of widespread abuse, legislative history skeptics worry that the known fact of judicial reliance subjects courts to being deceived. One appellate jurist has opined that legislators are in effect “encouraged to salt the legislative record with unilateral interpretations of statutory provisions they were unable to persuade their colleagues to accept.”

---

14 See generally GREENAWALT, supra note 9, at 182.
15 See ESKRIDGE ET AL., supra note 10, at 311. See also WALTER J. OLESZEK, CONGRESSIONAL PROCEDURES AND THE POLICY PROCESS 106 (7th ed. 2007) (describing committee reports as “directed primarily at House and Senate members” and as “the principal official means of communicating a committee decision to the entire chamber”).
Another has referred to legislative history as “clues [that] are slanted, drafted by the staff and perhaps by private interest groups.”\(^{18}\)

These worries arguably take on added weight with respect to the field of labor and employment law. From the New Deal onward, the dynamic within House and Senate labor committees has tended to be more internally partisan than in other committees, and labor committee composition has often been to the left of the median member.\(^{19}\) These committees generated a series of major employee protection bills: many were enacted essentially as reported by the committee although some underwent modifications on the floor.\(^{20}\) It has been suggested that legislative history accompanying at least some of these bills did not match the policy inclinations or judgments of the chamber as a whole.\(^{21}\)

If key liberal committee members and their staffs have been successful in “reshaping” the legislative record to support their own preferences, one might anticipate a tilt toward pro-employee explanations or elaborations to be reflected in Supreme Court decisions invoking that record. We examine this preliminary hypothesis—that the Court’s overall reliance on legislative history is associated with liberal results—in Tables 1 and 2 below.

2. **Opportunism at the Interpretation Stage**

---

\(^{20}\) For examples of major provisions created in course of floor debate, see Title I of LMRDA (Senate floor); sex discrimination prohibitions of Title VII (House floor).

The concerns just expressed portray judges as unsuspecting victims, prone to be misled by the deceptive “slant” of a legislative record. Of course, Supreme Court justices are not generally viewed as such naïve or inexperienced figures. They have been nominated and confirmed based on a considerable background of performance as judges, lawyers, or policymakers, as well as on their articulated judicial philosophies. This experience is thought to generate both a certain level of doctrinal sophistication and a fairly developed set of ideological predispositions. One might therefore expect that justices whose backgrounds indicate an identification with the positions of employees, unions, or civil rights claimants would themselves be favorably inclined, even if subconsciously, toward a legislative record angled in those directions. Conversely, one might assume that justices whose experiences suggest alignment with employers and the business community would have less enthusiasm for invoking a legislative record tilted toward employee interests, or would sift that record for evidence supporting employers’ legal positions.

This leads into a second area of concern about legislative history as a political asset—the opportunities for judges to engage in strategic behavior. Statutes are typically the result of legislative bargaining among many individuals, and a prevailing coalition will include members whose support for the final bill language reflects differing priorities and even distinct objectives. The plethora of legislative record materials produced by coalition members (including their staff, interested private parties, and perhaps executive branch personnel) is likely to express a nuanced range of perspectives as to what the proposed law is meant to accomplish.

Subsequently, judges exercising interpretive discretion may invoke this legislative history in ways that favor the priorities of some coalition members over others, or even that prefer
positions espoused by members outside the coalition. Their rationale for these exercises of discretion is very likely to be that the history supports what the judges declare and believe to be the better reasoned legal position. But legislative history skeptics fear that what is selected as persuasive evidence will tend to comport with a judge’s own preferred policy outcome, and that such an accommodation is too readily secured given the choices available to judges from a richly diverse legislative record.

Legislative history proponents have responded to concerns that judges engage—consciously or not—in such strategic behavior. There is a broadly recognized hierarchy of legislative history sources that operates as an initial constraint on judicial discretion. Conference reports, standing committee reports, and explanatory floor statements by bill managers or sponsors are clustered near the top in terms of their presumptively persuasive force, while legislative inaction, statements by nonlegislative drafters, and post-enactment history are arrayed close to the bottom. Beyond these guidelines, judges are effectively pressured to consider on a case-by-case basis whether the legislative record materials are sufficiently accessible, relevant, and reliable to be construed as convincing evidence of what Congress must have understood it was approving. In deciding such matters, judges generally explain (and often defend against the objections of dissenting colleagues) that certain statements should sensibly be construed as part of a broader understanding among legislators, based on the identity of the speaker, the nature and visibility of her presentation, or the reasoned elaboration contained in her remarks.

---

25 See ESKRIDGE ET AL., *supra* note 10, at 304, 310; Brudney, *supra* note 1, at 75-82.
These factors and others vary from one setting to the next, just as there are context-specific variations in the applicability of dictionary definitions or language canons.

Nonetheless, the constraints that may broadly channel interpretive discretion are regarded by some as incapable of controlling judges who inevitably bring their own normative vantage points to a legislative record replete with aspiration and self-promotion as well as neutral presentation. Skeptics point to the frequency with which majorities and dissents at the Supreme Court level disagree as to the meaning of legislative history. In the labor and employment law area, where Congress has regularly acted to enhance employee protections but the strength and scope of those protections are not always clear, disagreements between liberal and conservative Justices are common.

Perhaps the most celebrated example involves *Steelworkers v. Weber*, in which Justices Brennan and Rehnquist adopted radically different viewpoints as to whether the Congress that enacted Title VII of the 1964 Civil Rights Act meant to prohibit voluntary affirmative action plans. The Brennan majority opinion determined that committee reports and floor debate revealed an intent to avoid regulating voluntary efforts to redress glaring racial imbalance in a workforce. The Rehnquist dissent insisted over 25 pages that the law’s chief sponsors and supporters could not have been clearer in identifying all such race-conscious plans as prohibited.

---

27 See generally Adrian Vermeule, Judging Under Uncertainty 89-115 (2006); Kozinski, supra note 23, at 817-19.
29 See id. at 202-208.
30 See id. at 229-254.
The majority’s use of legislative history in Weber has been viewed as an illustration of how liberal Justices can make the record say what they want it to, and there are other less prominent instances of analogous disagreements. When reviewing the history of a liberal workplace statute, conservative justices authoring pro-employer dissents have construed specific legislative record statements to mean the exact opposite of what the liberal majority has stated they mean. Pro-employer dissents also have relied on a separate piece of legislative record evidence than the ones invoked by the liberal majority, and they have concluded that certain portions of the same record reveal an overarching purpose at odds with the evidence of specific intent discussed by the liberal majority.

If these decisions are representative, one would expect liberal Justices’ legislative history reliance in the workplace law area to be associated with liberal pro-employee results substantially more often than with conservative pro-employer outcomes. We examine this central hypothesis and related questions in Tables 3 through 6 below, based on Supreme Court workplace law decisions over thirty-seven years.

B. The Dataset of Workplace Law Decisions

Our dataset consists of every Supreme Court case with a published merits opinion addressing some aspect of the employment relationship from the start of the Burger Court in fall 1969 through the 2005-06 Term. This universe features 578 decisions that implicate one or

---

31 See, e.g., Rodriguez & Weingast, supra note 21, at 1517-21.
35 For a detailed discussion of how we assembled our dataset, see James J. Brudney & Corey Ditslear, Canons of Construction and the Elusive Quest for Neutral Reasoning, 58 VAND. L. REV. 1, 15-29 (2005). The complete dataset and codebook are available on the web at http://www.psci.unt.edu/Ditslear/LHdata.html
The decisions address well-trodden fields such as union-management relations and race or gender discrimination, but also a wide range of other subject areas including safety and health, minimum wage and overtime standards, retirement benefits, discrimination based on age or disability, and even employment-related disputes arising in connection with tax, criminal, or immigration law. Measured in three-year intervals, workplace law cases have formed a reasonably stable portion of the Court’s docket since the mid 1970s, about one-sixth of all merits decisions.

We focus here on the Court’s use of legislative history as an interpretive resource to help explain or justify its decisions. The Supreme Court ordinarily relies on committee reports, floor debates, hearings, and other legislative record evidence for one of two reasons: to help resolve textual ambiguity, or to confirm and reinforce apparent plain meaning. The Court makes regular use of other interpretive resources as well, such as the plain meaning of statutory language, the Court’s own precedent, the canons of construction, and agency deference. We do not attempt to prioritize among the various resources typically cited as helpful in contributing to the Court’s result. Judicial reasoning is highly situation-specific, and we concluded that any

36 The dataset through the first term of the Roberts Court consists of 658 decisions altogether, including 80 presenting issues of constitutional law that do not implicate federal statutes. Although we have included these “pure” constitutional decisions as a distinct category in other articles making use of the dataset, we omit them here. The content and function of “constitutional history” (e.g., Convention proceedings, The Federalist Papers, state ratification debates) have been analyzed differently from legislative history by certain current justices and also by legal scholars. See generally William N. Eskridge, Jr., Should the Court Read the Federalist but Not Statutory Legislative History?, 66 GEO. WASH. L. REV. 1301 (1998); Note, Justice Scalia’s Use of Sources in Statutory and Constitutional Interpretation: How Congress Always Loses, 1990 DUKE L. J. 160 (1990). We determined that these differences, along with the Court’s relatively infrequent reliance on constitutional history (roughly ten percent of the 80 cases, compared with over forty percent reliance on legislative history for the 578 statutory cases) warranted excluding the pure constitutional decisions from our analysis in this setting.

38 Apart from legislative history, we have coded for nine other interpretive resources on which the justices rely with some frequency: (i) the plain or ordinary meaning of text; (ii) dictionaries; (iii) language canons; (iv) legislative purpose; (v) legislative inaction; (vi) Supreme Court precedent; (viii) common law precedent; (viii) substantive canons; and (ix) agency deference. The Court’s opinions almost always rely on at least two resources and the vast majority recognize three or more.
effort to rank the Court’s multiple and often complementary justifications for its holdings would
simply be too subjective. For our purposes, so long as legislative history was expressly
identified and discussed by the majority as either an affirmatively probative or a determining
factor, we conclude that it was relied upon by the Court.\footnote{When a majority opinion invokes legislative history only in a deflecting way, \textit{i.e.}, to dismiss the value ascribed to it by a lower court, a party’s brief, or a dissenting justice, we do not regard this as positive reliance. Our conclusion that such deflecting references are not integral to the majority’s affirmative reasoning process rests on our decision to distinguish between substantive uses of an interpretive resource that an opinion’s author supports and substantive uses the author rejects as unpersuasive, inconclusive, or incorrect. Moreover, in order to examine most clearly the relationship between judicial reasoning and judicial outcomes, we chose to analyze resources as they are used to \textit{advance} results endorsed by the majority. \textit{See generally} Canons of Construction, \textit{supra} note 35, at 25-26.}

In order to address the concern that legislative history is more of a political than a neutral interpretive resource, we consider in some detail the relationship between the Court’s reliance on legislative history and the ideological direction of its majority opinions. We have classified all 578 decisions based on whether the Court’s outcome favored unions or employees (liberal) as opposed to employers (conservative).\footnote{For about eight percent of the 578 cases (44 total), we were unable to identify the Court’s decision as liberal or conservative. These involved either decisions that were closely divided in outcome between employees and employers, or disputes between individual employees and their unions where the direct policy implications seemed to us too close to call (\textit{e.g.}, allowing a newly elected union president to discharge appointed business agents who had opposed him in the election; or disciplining an individual for crossing a picket line during a strike authorized by a majority of the employees when the individual’s conduct violates the union constitution). We coded “reverse discrimination” cases (such as \textit{Weber}) as liberal if the outcome favored the group or class that was the primary intended beneficiary of the statutory provision. For further discussion of our ideological coding of cases, see Canons of Construction, \textit{supra} note 35, at 18-19.} In addition, we have identified each of the twenty-one Justices who served during this period as either liberal or conservative.

In identifying the ideological orientation of the Justices, we relied on voting scores derived from a database compiled by Professor Harold Spaeth, a well-recognized scholar of Supreme Court voting behavior.\footnote{See The Original U.S. Supreme Court Judicial Database, 1953-2005 terms (last updated 10-10-2006) \url{http://www.as.uky.edu/polisci/ulmerproject/sctdata.htm}. \textit{See generally} JEFFREY A. SEGAL & HAROLD J. SPAETH, \textit{THE SUPREME COURT AND THE ATTITUDINAL MODEL} 256-260 (1993).} By combining a number of Spaeth’s designated issue areas,
we are able to provide a distinctively formulated subject matter field that is comparable to our own workplace law dataset. Based on the voting scores for these issue areas, we identify eleven Justices as conservative and ten as liberal. The Spaeth combination of issue codes provides a useful independent baseline; at the same time, there is a close correlation between voting behavior in our dataset and in the larger Spaeth collection of civil rights-unions-economic-government employee issues.

Interinstitutional Preference Estimation, 17 J.L. ECON. & ORG. 477 (2001). These measures, however, are derived through the original Spaeth dataset, relying on vote scores that are still used regularly in the political science field. We chose not to pursue the newer measures, which are generally oriented toward the universe of all cases rather than a discrete subset of decisions. We do take account of the changing nature of legislative history reliance over time, as well as changes in the approaches taken by individual Justices. See infra tbsls. 1-6 and accompanying discussion.

We obtain an ideology score exogenous to our dataset based on each Justice’s votes through the 2005-2006 term (including votes prior to the 1969 term for eight of the twenty-one) on a subgroup of issues in the Spaeth data base. These consist of all civil rights issues (Issue variable codes in 200s and 300s), all union-related issues (Issue variable codes 553 to 599), selected government employee and federal preemption issues (Issue variable codes 432, 435, 503, and 910), and selected economic issues (Issue variable codes 601, 605, 611, 621, 631, and 636). The civil rights issues are modestly overinclusive in that they contain cases dealing with voting rights, education, and general poverty law as well as employment. The combined issue codes are also mildly underinclusive in that certain omitted codes represent policy areas (for example, First Amendment) that contain some employment-related subjects. Still, the Spaeth combination of issue codes has substantial overlap with our employment-based dataset, and in screening out a number of potentially distorting or conflating policy areas (such as criminal law, judicial power, natural resources), it provides a distinctive assessment for the ideological orientations of the Justices.

Justices are coded as liberal or conservative by using simple directional analyses keyed to the proportion of liberal votes in the Spaeth Issue areas. The eleven conservatives (Justices Harlan, Stewart, Burger, Powell, O’Connor, Scalia, Kennedy, Thomas, Rehnquist, Roberts, and Alito) voted for individuals (against employer, business, or government-related positions) less than 50 percent of the time; the other ten Justices cast pro-individual employee votes in more than 50 percent of the cases. When relying on judicial classifications in our analyses, we focus on the eight liberals (Justices Brennan, Marshall, White, Blackmun, Stevens, Souter, Ginsburg and Breyer) and the eight conservatives (those listed above except for Harlan, Roberts, Alito) who served ten or more terms between 1969 and 2006.

The voting scores listed below reflect the percent of cases in which a Justice cast votes favoring the legal position of individuals, employees, or unions; a score above 50 percent is characterized as liberal. We present vote scores based on the Spaeth issue codes side-by-side with scores based on our own dataset; we include in parenthesis the number of ideologically identified votes cast by each Justice.

42 We obtain an ideology score exogenous to our dataset based on each Justice’s votes through the 2005-2006 term (including votes prior to the 1969 term for eight of the twenty-one) on a subgroup of issues in the Spaeth data base. These consist of all civil rights issues (Issue variable codes in 200s and 300s), all union-related issues (Issue variable codes 553 to 599), selected government employee and federal preemption issues (Issue variable codes 432, 435, 503, and 910), and selected economic issues (Issue variable codes 601, 605, 611, 621, 631, and 636). The civil rights issues are modestly overinclusive in that they contain cases dealing with voting rights, education, and general poverty law as well as employment. The combined issue codes are also mildly underinclusive in that certain omitted codes represent policy areas (for example, First Amendment) that contain some employment-related subjects. Still, the Spaeth combination of issue codes has substantial overlap with our employment-based dataset, and in screening out a number of potentially distorting or conflating policy areas (such as criminal law, judicial power, natural resources), it provides a distinctive assessment for the ideological orientations of the Justices.

43 Justices are coded as liberal or conservative by using simple directional analyses keyed to the proportion of liberal votes in the Spaeth Issue areas. The eleven conservatives (Justices Harlan, Stewart, Burger, Powell, O’Connor, Scalia, Kennedy, Thomas, Rehnquist, Roberts, and Alito) voted for individuals (against employer, business, or government-related positions) less than 50 percent of the time; the other ten Justices cast pro-individual employee votes in more than 50 percent of the cases. 44 The voting scores listed below reflect the percent of cases in which a Justice cast votes favoring the legal position of individuals, employees, or unions; a score above 50 percent is characterized as liberal. We present vote scores based on the Spaeth issue codes side-by-side with scores based on our own dataset; we include in parenthesis the number of ideologically identified votes cast by each Justice.
II. RESULTS

A. Legislative History and Ideology for the Court as a Whole

Preliminarily, we reviewed ideological outcomes in general for our dataset and found that the decisions over this thirty-seven year period are fairly evenly divided. There is a small tilt toward results favoring employees: of the 534 cases for which we coded directional outcomes, 282 (53 percent) were liberal decisions while 252 (47 percent) were conservative. Employees and unions did fare somewhat better when appearing in the Burger Court than they have since 1986 in the Rehnquist and Roberts Courts; the difference in employee success rates between the two eras approaches significance.

For twelve of the sixteen Justices with ten terms or more on the Court, there is less than a 5 percent difference between our voting scores and Spaeth’s scores. For three Justices (White, Scalia, Rehnquist) the difference is between 6 percent and 10 percent, and for one Justice (Thomas) it is 14 percent. Only one of the twenty-one Justices has a differential that changes his characterization: Justice Roberts’ Spaeth “label” (conservative) is at odds with his voting record in our dataset based on eight workplace law cases in his initial term. We classified forty-four of the 578 cases as indeterminate. See note 40 supra. In nineteen of the 578 cases (nine in the Burger Court and ten in the Rehnquist Court), the Court announced its holding and set forth its principal reasoning in a plurality opinion. We treat these plurality opinions as majorities for purposes of our analyses.

45 We classified forty-four of the 578 cases as indeterminate. See note 40 supra. In nineteen of the 578 cases (nine in the Burger Court and ten in the Rehnquist Court), the Court announced its holding and set forth its principal reasoning in a plurality opinion. We treat these plurality opinions as majorities for purposes of our analyses.

46 In the Burger era, 56 percent of decisions were liberal while in the Rehnquist and Roberts eras it has been 50 percent; the difference approaches significance (t = .0875). The use of “significant” refers to results that are statistically significant using either the t-test or the z-test as appropriate based on the sample size. A t-test compares the mean of two samples of sets of data, controlling for the sample size, to determine whether the difference between the statistics could be due to chance. A result that is significant at the .05 level (t ≤ .05) has no more than a 5 percent chance of occurring purely as coincidence. R. Mark Sirkin, Statistics for the Social Sciences 178-89 (1995). We follow the common social science approach of designating results with a t-value of between .05 and .10 as “approaching significance.” All statistical analyses in this Article are run using Stata Version 8.
This finding of broad-based ideological neutrality with a liberal tilt, although seemingly at odds with the Court’s more conservative reputation in recent decades, is probably due to several different factors. As a threshold matter, disputes that are litigated all the way to the Supreme Court are likely to raise reasonable legal arguments on both sides, and the win rates of employee and employer advocates may therefore tend to be comparable over an extended period.47 Further, in the area of labor and employment law the business community in recent decades has played a larger role in presenting the Justices with cases that push the envelope than it did during the Warren Court era or the early Burger Court years. To the extent that employers have pursued an ambitious agenda before a Court they view as relatively sympathetic, their win-loss rate may have suffered as a consequence.48

Finally, aggregate results keyed simply to outcomes cannot measure the magnitude or consequences of particular Supreme Court decisions. An employer win in a major substantive case and an employer loss in a minor jurisdictional case may carry very different policy implications that our initial quantitative analysis does not capture. With respect to the Justices’ use of legislative history, we attempt to account for this magnitude factor by examining results in close cases as a separate category, and also by reviewing illustrative decisions in doctrinal terms.

1. Legislative History and Ideology Over Time

We begin by reporting the extent to which the Court as a whole has relied on legislative history to justify its liberal (pro-employee) and conservative (pro-employer) holdings. Table 1 presents legislative history reliance as a proportion of the 282 liberal decisions, the 44 cases with

48 Conversely, the employee rights community’s inclination to pursue new approaches before the Court has been more subdued in recent decades. See generally Lee Epstein, Interest Group Litigation During the Rehnquist Court Era, 9 J. LAW & POLITICS 639, 681-82 (1993).
indeterminate outcomes, and the 252 conservative decisions reached from 1969 to 2006. Table 1 includes a similar breakdown for cases decided during the two basic eras that constitute this thirty-seven year period: the 301 workplace law decisions issued by the Burger Court over seventeen terms through June 1986, and the 277 workplace law cases resolved by the Rehnquist and Roberts Courts in twenty terms through June 2006.49

The findings set forth in Table 1 indicate that the Court relies on legislative history to justify conservative results about as often as liberal outcomes. For the universe of all 578 cases, the difference between legislative history’s contribution to decisions that favor employees (43.6 percent) as opposed to employers (41.7 percent) is not close to significant. Further, although Table 1 suggests that overall reliance on legislative history has declined sharply from the Burger to the Rehnquist/Roberts eras,50 that decline has not been accompanied by a change in the ideological direction associated with legislative history reliance. The Burger Court invoked legislative history a shade more often to help support liberal as opposed to conservative results (53.9 to 52.9) and the Court in its reliance since 1986 has established a comparably bare margin favoring liberal outcomes (31.5 to 31.3).

49 There are fewer workplace law decisions per term during the Rehnquist/Roberts era (13.9) than in the Burger era (17.7). This decrease parallels the overall decline in number of decisions per term for the period since 1986. See generally LEE EPSTEIN ET AL. THE SUPREME COURT COMPENDIUM: DATA, DECISIONS & DEVELOPMENTS 82-84 tbl. 2-11 (3d ed. 2003).

50 See also James J. Brudney & Corey Ditslear, The Decline and Fall of Legislative History? Patterns of Supreme Court Reliance in The Burger and Rehnquist Eras, 89 JUDICATURE 220, 222 (2006) (reporting significant decrease in legislative history reliance between Burger and Rehnquist eras).
With respect to the 244 decisions (out of 578) that rely on legislative history, there is a more noticeable liberal tilt: 50 percent reach pro-employee results, 43 percent have pro-employer outcomes, and 7 percent are indeterminate. This liberal slant is observable in Burger Court decisions relying on legislative history, although not in decisions during the Rehnquist/Roberts Court. The difference should not be surprising given that, as noted earlier, employees and unions enjoyed somewhat more favorable results overall during the Burger era than they have experienced since 1986. Importantly for our purposes, the ideological complexion of cases relying on legislative history in each era does not differ significantly from the complexion of cases in each era that do not invoke legislative history.

2. Legislative History and Ideology in Close Cases

Although the Court decides many cases on a unanimous basis, a substantial number of decisions are closely contested among the Justices and feature one or more reasoned dissents. In Table 2, we examine whether close cases that include majority reliance on legislative history have a distinct policy orientation. We do so by reviewing the ideological outcomes associated with two subsets of majority opinions that invoke legislative history: majorities in unanimous cases (involving zero dissenters) and in close cases (involving a vote margin of one or two). The results reported in Table 2 indicate that a comparable proportion of liberal and conservative

51 This distribution favors employees slightly more than the ratios for the 334 decisions that fail to invoke legislative history, but the difference is not significant. Considering all 578 decisions, 49 percent reach liberal results, 44 percent have conservative outcomes, and 8 percent are indeterminate. Percentages exceed 100 due to upward rounding for each of these three figures.
52 From 1969 to 1986 the Court’s 157 decisions relying on legislative history reached liberal results in 52 percent of the cases and conservative outcomes in 41 percent. The Rehnquist/Roberts Court’s 87 decisions relying on legislative history were split down the middle—47 percent reached a pro-employee result and 47 percent a pro-employer outcome.
53 See note 46, supra and accompanying text.
54 In the Burger Court, the 144 decisions not relying on legislative history reached pro-employee results 49 percent of the time and pro-employer results 40 percent. In the period since 1986, the 190 decisions not relying on legislative history reached liberal and conservative results with the same frequency—47 percent of the time. These findings virtually mirror the results for decisions relying on legislative history, reported at note 52, supra.
unanimous decisions invoke legislative history. At the same time, close cases relying on legislative history are more likely to reach liberal rather than conservative results.

*Indicates a difference that approaches significance between liberal decisions and conservative decisions relying on legislative history for a given vote margin.

It is noteworthy that our 125 close cases have a distinctly conservative or pro-employer direction overall (52 percent conservative—65 of 125—versus 39 percent liberal—49 of 125), a direction that is strikingly evident in developments since 1986. Close cases during the Burger era were evenly divided between liberal and conservative outcomes, but the Rehnquist/Roberts Court’s close decisions have favored employers twice as often as employees. This conservative shift may in turn reflect the cumulative impact of partisan nominations. Eleven of

---

55 The left-hand column of findings reflects that 33.5% of the 158 unanimous liberal decisions relied on legislative history, while 36.4% of the 77 unanimous conservative decisions invoked this interpretive resource. For purposes of classifying vote margins, we counted concurring opinions on the side of the majority. An opinion that both concurred and dissented was counted as a dissent.

56 For the difference on close cases, t = .0855. In all tables, we identify significant differences with two asterisks (**) and differences that approach significance with one asterisk (*). See note 46, supra. In addition to the results for close and unanimous decisions reported in Table 2, we also coded results for the 108 decisions involving a wide margin of support (a vote differential of five, six, or seven) and the 97 cases involving support by a moderate-sized majority (a vote margin of three or four). For both sets of cases, majorities relying on legislative history are somewhat more likely to reach liberal rather than conservative results. The difference is not significant for the moderate-margin cases, but approaches significance (t = .071) for the wide-margin decisions. Copies of these results are available from the authors.

57 Our N of 373 consists of 248 unanimous decisions (13 of which are indeterminate) and 125 close cases (11 of which are indeterminate).

58 Of 71 close decisions in the Burger era, 32 favored employers, 32 favored employees, and 7 were indeterminate. By contrast, of 54 close cases since 1986, 33 favored employers, only 17 favored employees, and 4 were indeterminate.
the thirteen Justices who joined the Court since 1970 have been chosen by Republican presidents, and almost every one of the eleven was more conservative in terms of relevant judicial philosophy than the Justice he or she replaced. It makes sense that a closely divided Court will tend to tip in a pro-employer direction as the proportion of more conservative replacements increases.

Of greater relevance to us is the fact that when the majority relies on legislative history in close cases it is more likely to reach a liberal rather than a conservative outcome. This result too reflects sharp differences in cases decided since 1986. During the Burger era, majority opinions relied on legislative history to help justify closely divided conservative decisions as often as they did to help explain liberal results. By contrast, close cases in the Rehnquist/Roberts years have relied on legislative history to support pro-employee results at twice the rate of reliance for pro-employer outcomes.

---

59 The individual replacements chosen by Republican presidents were as follows: Blackmun for Fortas; Rehnquist and Powell for Harlan and Black; Stevens for Douglas; O’Connor for Stewart; Scalia for Burger; Kennedy for Powell; Souter for Brennan; Thomas for Marshall; Roberts for Rehnquist; and Alito for O’Connor. Except for Kennedy (who is barely more liberal than Powell) and Roberts (who has served only one term through June 2006), each new Justice scores more conservative on the Spaeth scale than the Justice being replaced. See note 44 supra.

60 Unlike close cases, our 248 unanimous decisions have a decidedly liberal slant both before and after 1986. In the Burger era, 68 percent of 108 unanimous decisions reached pro-employee or liberal results while 26 percent established pro-employer conservative holdings. During the Rehnquist/Roberts years, 61 percent of 140 unanimous decisions have been liberal while 35 percent have reached conservative outcomes. This prolonged tendency for unanimous cases to produce liberal results may be part of a broader institutional dialogue involving perceptions of an increasingly conservative Court. Lower courts anticipating the Supreme Court’s direction, and pro-employer litigants enthused about where the Court seems to be heading, may tend to expect and argue for more rapid conservative movement in the workplace law arena than the Court is prepared to undertake. The Justices’ response to such pressures is a unanimous rebuff. The liberal tilt of unanimous decisions also may be due in part to conservative Justices feeling more constrained by rule-of-law norms than do their liberal counterparts, and therefore more often voting to uphold legal positions that diverge from their own policy preferences. See Brenner & Arrington in 9 Pol. Behav. 75, 78-80 (1987) (speculating on conservative Justices’ penchant for rule-of-law norms during Vinson, Warren, and Burger Courts). Finally, unanimous decisions may reflect more opportunistic judgments by conservative Justices: if the cases raise issues that are less important in policy terms or are less intensely ideological, liberal victories can be ceded at relatively small cost.

61 For close cases reaching pro-employer results in the Burger years, legislative history reliance was 66 percent (21 of 32 decisions); for close pro-employee cases, legislative history reliance was 62.5 percent (20 of 32 decisions).

62 During the Rehnquist/Roberts era, legislative history reliance in close liberal cases has been 53 percent (9 of 17 decisions) but for close conservative cases it has been a mere 27 percent (9 of 33 decisions). This difference is significant (t = .038).
As will become clearer when we consider the record of individual justices, the liberal or pro-employee orientation of close cases that rely on legislative history reflects distinctive conduct by both the eight long-serving liberal Justices and their conservative counterparts. Liberal Justices as a group are more likely to rely on legislative history than conservatives—we suggest below that this difference has more to do with interpretive philosophy than ideological orientation. When the Court is closely divided, it is not surprising that justices who author majority opinions reaching pro-employee results tend to be liberal and therefore heavier legislative history users, while justices who author decisions favoring employers are likely to be conservative hence lighter legislative history users.

In addition, however, the four conservative Justices with extended tenure on the Rehnquist but not Burger Courts—Justices O'Connor, Scalia, Kennedy, and Thomas—have relied on legislative history significantly less often than did their three conservative colleagues (Justices Stewart, Burger, and Powell) who served primarily or exclusively on the Burger Court. This difference between new and old conservatives has meant that close cases favoring employers after 1986 are less likely to invoke legislative history as part of majority reasoning than was true up until 1986. The distinction between new and old conservatives has sharpened the differences in legislative history reliance that exist between liberal and conservative Justices as larger groups.

Before turning to relationships between legislative history and ideology for individual justices, we note that during the Rehnquist/Roberts era, majority authors of unanimous decisions

---

63 See Part III A.5 infra.

64 The four new conservatives identified in text have relied on legislative history in 22 of 113 majority opinions, or 19.5%. The three old conservatives relied on legislative history in 35 of 68 majority opinions, or 51.5%. The difference is significant (t = .0001). Justice Powell served briefly on the Rehnquist Court and Justice O'Connor for a short period on the Burger Court, but each authored about 90 percent of their majority opinions in workplace law during the period to which we have assigned them. Justice Rehnquist, who served for more than a decade on each Court and authored a substantial number of majorities in each period, is not included in this comparison.
rely on legislative history substantially less often than they do for close cases.\(^{65}\) This lower level of legislative history reliance in unanimous opinions raises the possibility that liberal Justices may be choosing to invoke legislative history less often when Justice Scalia is on their side (in unanimous cases where they write the opinion) than when he opposes their position (in close cases where they author what is usually a pro-employee majority). We pursue this and other implications of a potential Scalia effect in Part III.\(^{66}\)

B. *Legislative History and Ideology for the Liberal Justices*

Thus far, we have found that legislative history reliance by the Court as a whole is not distinctly ideological. Legislative history is as likely to be invoked to help support pro-employee results as pro-employer outcomes, and this Court-wide neutrality applies for both the Burger Court and the Rehnquist/Roberts years. There are, however, certain changes in the ideological tenor of legislative history usage between the two eras. Close cases decided since 1986 that rely on legislative history are significantly more likely to reach liberal results, although this was not true with respect to close cases during the Burger years. Further, legislative history during the Rehnquist/Roberts years is invoked substantially less often in unanimous decisions than in close cases.

\(^{65}\) The 140 unanimous majority opinions issued in the Rehnquist/Roberts era rely on legislative history 26 percent of the time. By contrast, the 54 majority opinions in close cases during these years rely on legislative history 35 percent of the time. This difference between legislative history usage in unanimous and close cases is not significant, although it is not far off \((t = .115)\). Overall, 31 percent of the 277 Rehnquist/Roberts Court majorities rely on legislative history.

For the dataset as a whole, legislative history is significantly more likely to be used in close cases than in unanimous decisions \((t = .001)\), and this difference in usage also is significant during the Burger years \((t = .008)\). The fact that legislative history was used so heavily in Burger era close cases, and that these close cases were evenly divided between liberal and conservative outcomes \((\text{see note 61 supra})\), suggests a consensus view that evidence of congressional intent was especially valuable in closely contested settings. No such consensus has existed since Justice Scalia joined the Court. See Part IIIB infra.

\(^{66}\) While 33 percent of 49 pro-employer unanimous decisions authored since 1986 rely on legislative history, only 22 percent of 85 pro-employee unanimous decisions during this period invoke legislative history to help support the holding. However, the 22 percent figure is attributable to the approaches taken by the five conservative Justices in this period. The liberal Justices rely on legislative history in 31 percent of their unanimous pro-employee opinions (17 of 54); by contrast, Justices Rehnquist, O’Connor, Kennedy, Scalia, and Thomas invoke legislative history in a mere 7 percent of their pro-employee unanimous majorities (2 of 28). See further discussion infra at III.B.
We now shift our attention to patterns of legislative history usage by the Court’s liberal Justices. Our central hypothesis was that the eight liberals would likely rely disproportionately on legislative history to support the pro-employee agenda reflected in federal workplace statutes. If this hypothesis is correct, we should expect to “unmask” the Court’s overall ideologically neutral approach by focusing on the liberal cohort of justices. As indicated below, however, the evidence does not support our core assumption.

1. Ideology and Reliance for Liberal Justices as a Group

In order to consider whether the use of legislative history is ideologically linked in the hands of our eight liberal Justices, we assess reliance over the entire 37 year period, and also separately during the Burger and Rehnquist/Roberts eras. We begin by focusing on the 162 majority opinions authored by these justices that relied on legislative history, to determine the extent to which—when using this resource—liberal Justices are explaining or justifying liberal, pro-employee outcomes.

</tr>
</tbody>
</table>

(Total number of majority opinions for each outcome in parenthesis)

Table 3 indicates that liberal Justices as a group are basically outcome neutral in the way they rely on legislative history. If anything, their pattern of reliance in majority opinions is slightly at odds with our assumption that they will use legislative history to favor a pro-employee approach.
As one would expect, our eight liberal Justices author majority opinions that uphold employee legal arguments substantially more often than they vindicate employer positions. Out of 322 authored majorities, the liberal Justices have supported pro-employee results in fifty-nine percent of the cases (189 decisions) and pro-employer outcomes in thirty-three percent (107 decisions).\(^6^7\) This heavy preponderance exists for majorities authored both before and after 1986.\(^6^8\)

More surprising is the fact that for liberal Justices, legislative history usage *points away from the pro-employee purposes of the workplace law statutes*. Liberal Justices use legislative history to help support pro-employer outcomes somewhat more often (in 54.2 percent of the conservative majorities they write) than pro-employee results (in 48.7 percent of their liberal majority opinions). This slight moderating tendency exists in both the Burger and the Rehnquist/Roberts eras. The differences reported in Table 3 are not significant, but the fact that liberal Justices’ reliance on the legislative history of liberal workplace statutes even tilts in such a pro-employer direction warrants further examination.

The pro-employer shading reported in Table 3 becomes somewhat more pronounced when we compare outcomes for the liberal Justices in the 162 decisions they authored that rely on legislative history versus the 160 decisions that do not.

---

\(^{67}\) Percentages do not add up to 100 because the 322 majorities authored by liberal Justices include 26 cases with indeterminate ideological outcomes. See note 40 *supra*.

\(^{68}\) During the Burger era, liberal justices’ majorities favored employee positions by 56 percent to 35 percent (99 of 178 majorities were pro-employee; 62 of 178 were pro-employer). In the Rehnquist/Roberts years the ratio is 62 percent to 31 percent, (90 of 146 majorities were pro-employee; 45 of 146 were pro-employer. The eight liberal justices also rely on legislative history considerably more often than do their conservative counterparts. Of 322 majority opinions, just over 50 percent (162) relied on legislative history. By contrast, the eight conservative Justices have relied on legislative history in only 31 percent of their majority opinions (69 of 220). Of the remaining 36 decisions not authored by our two cohorts of justices, twenty were *per curiam* opinions and the rest were authored by the five justices serving for short periods during this 37 year time frame—Justices Black (3), Harlan (4), Douglas (8), Roberts (1), and Alito (0).

</tbody>
</table>

As Table 4 indicates, decisions authored by the eight liberal Justices that rely on legislative history reach liberal or pro-employee dispositions 21 percent more often than they arrive at conservative or pro-employer results. This liberal-conservative outcome differential rises by nearly one-third, to 30 percent, when the decisions do not invoke legislative history. The tendency for liberal Justices’ majorities to be “less liberal” when they rely on legislative history than when they don’t is especially apparent during the Burger Court years.

The directional trend reported in Tables 3 and 4 is intriguing. We have posited the existence of a “magnifying effect” in liberal Justices’ reliance on legislative history for liberal workplace statutes—that the eight justices will become even more ideological than normal when invoking this “ politicized” resource. Instead, we have observed in quantitative terms only a “supporting effect”—the liberal Justices rely on legislative history to reflect but not extend their pre-existing ideological preferences. Moreover, from a directional standpoint we have noted a modest “neutralizing effect”—the Justices’ patterns of reliance point toward their being less ideological than normal when making use of legislative history.69

69 We also ran a logistic regression analysis to examine whether legislative history reliance was significantly associated with either pro-employee or pro-employer results when controlling for the ideologies of the justices and for certain other factors. Our dependent variable is a liberal or pro-employee decision. We use the “old” conservatives (Burger, Stewart, Powell) as our baseline, so our reference to conservative Justices in this Table covers the five who served for extended periods of time after 1986. The regression includes 520 of the 534 decisions with an ideological direction that are addressed in our bivariate analyses. See Table 1 and note 40, supra. We omit the fourteen majorities with an ideological direction authored by short-term Justices Douglas, Black, Harlan, and Roberts. (The four short-termers authored sixteen majorities—see note 68 supra—but two of these had indeterminate ideological results). Table 4A reports our results.
Before attempting to explain at a doctrinal level why the liberal Justices as a group use legislative history so regularly to support pro-employer results, we examine the data for these eight Justices as individual authors of majority decisions. It is possible that for one or two justices, legislative history reliance is powerfully associated with results that are less ideological than normal. Instances of significant neutralizing use could conceal the fact that many other liberal Justices rely on legislative history to promote their liberal policy preferences. In this regard, we also report findings on the majority opinions authored by our eight conservative Justices. The inclusion of all justices with substantial tenure during this period enables us to place the liberal Justices’ approach to legislative history in clearer perspective.

2. Ideology and Reliance for Individual Justices

In assessing the approaches to legislative history use by individual justices, we have built on our findings in Table 4. For each justice, we present the percentage of majority opinions that rely on legislative history to help support pro-employee versus pro-employer results, followed by

These results are consistent with our other findings. Liberal justices are significantly more likely to reach liberal results when authoring majorities than are the older conservatives, while the newer conservatives are somewhat less likely to do so than their older conservative counterparts. Legislative history reliance in a majority opinion—by liberal or newer conservative Justices—is not associated with either liberal or conservative outcomes. The negative coefficient sign for liberal justices’ reliance on legislative history indicates there is a slight moderating effect, as reported in Tables 3 and 4, and also Table 6 below. In addition, reliance on legislative history in dissent is significantly associated with a conservative result, indicating that the dissenters are using this history to support pro-employee or liberal outcomes. This finding comports with our discussion of when new conservatives use legislative history in their majorities. See Part III.B.3 infra.
the percentage of majorities not using legislative history that arrive at these two outcomes. Our interest is in determining whether the outcome differential (between liberal and conservative results) when a justice uses legislative history is more ideologically oriented than when that justice refrains from doing so. For liberal Justices, evidence of more ideological uses would be that majority decisions using legislative history are more liberal than those not invoking that resource. For conservative Justices, evidence of ideologically-oriented reliance would be the opposite—that majorities using legislative history are less liberal than majorities not relying on it.

Table 5 refers to the difference between outcome differentials as our coefficient. The coefficient has a negative sign if a Justice’s legislative history usage is associated with more neutral results, and a positive sign if the Justice’s legislative history usage points toward results more consistent with his or her ideological orientation. Thus, for instance, Justice Brennan authored 62 majorities in our dataset—37 using legislative history and 25 not doing so. His majorities relying on legislative history reached results that were 70 percent liberal and 16 percent conservative, a 54 percent differential. His majorities not relying on legislative history arrived at outcomes that were 76 percent liberal and 16 percent conservative, a 60 percent differential. For Justice Brennan, therefore, the coefficient is -6: he was slightly less likely to follow his pro-employee voting preferences when writing majorities that invoked legislative history than when authoring majorities that did not. Table 5 also includes (in parentheses) the total number of majority decisions by each justice that rely on legislative history and the number that do not.

**Indicates significant difference between a Justice’s ideological outcome differential when relying on legislative history as opposed to when not doing so.

The table indicates that two of the eight liberals, Justices White and Souter, are significantly less ideological when relying on legislative history in their majority opinions than when not doing so. For four other liberal Justices, patterns of reliance point in the same moderating direction, although the results there are not significant. Only two of the eight, Justices Breyer and Ginsburg, are inclined to rely on legislative history to reach more liberal results than in their other majorities; this magnifying association is not significant.

Given the relatively low number of majority opinions authored by individual justices, the significance findings for Justices Souter and White suggest the strength of their results. Moreover, these two liberal Justices are interesting because Justice Souter authors majorities that are somewhat more liberal than what is reflected in his overall vote score whereas Justice
White’s majorities are considerably more conservative than is his overall voting record. More generally, the six liberal Justices with negative coefficients include three whose majority opinions lean heavily in a pro-employee direction and three others who have authored decisions that are more evenly divided in terms of outcome.

On the other hand, Table 5 indicates that the two most recently appointed liberals, Justices Ginsburg and Breyer, have a more liberal record when they rely on legislative history than when they do not. In addition, two of the new conservatives, Justices O’Connor and Kennedy, are significantly more ideological when they invoke legislative history in their majority options—their results when relying on legislative history are distinctly more favorable to employers than when not doing so. This magnifying effect contrasts with the moderating association reported for two of the older conservatives, Justices Stewart and Powell, and also for Justice Rehnquist who authored numerous majorities in each era.

The differences between newer and older members of both the liberal and conservative cohort of justices suggest that since 1986, the two groups may be using legislative history more often in support of their policy preferences than was true during the Burger era. Table 6 reports changes over time in the outcome-related reliance on legislative history by liberal and conservative Justices.

---

70 Justice Souter has supported employees’ legal positions in 64 percent of nearly 200 cases overall, while favoring employees in 70 percent of the 23 majorities he has authored. Justice White supported employees’ legal positions in 52 percent of more than 450 cases, but his 59 majority opinions favored employees only 37 percent of the time. See note 44 supra for overall vote scores in our dataset. Justice White’s unusually high proportion of pro-employer majority opinions reflects that he was often a swing vote, writing conservative majorities in close cases.

71 Justices Brennan (73%), Marshall (69%), and Souter (70%) have authored majorities that favor employees roughly 70 percent of the time. By contrast, majorities written by Justices Blackmun (57%), Stevens (51%) and White (37%) have a more balanced set of outcomes.

72 Chief Justice Burger, the third older conservative, is more ideological when using legislative history than when not doing so, but he authored only three majorities in our dataset that eschewed legislative history, making comparisons less reliable. Similarly, Justice Scalia has a very high positive coefficient, but he has written only one majority that relies on legislative history in our dataset.
As Table 6 indicates, conservative Justices have become significantly more ideological in their use of legislative history during the Rehnquist/Roberts era. Conservatives’ reliance on this resource in the Burger years was associated with a moderating or pro-employee direction, but since 1986 their use of legislative history has shifted sharply in favor of employers.\textsuperscript{73} Liberal Justices’ reliance on legislative history is associated with a somewhat more ideological orientation when moving from the Burger Court to the Rehnquist/Roberts years, although the change is not significant. Moreover, since 1986, liberals as a group have favored liberal over conservative results to the same extent whether relying on or eschewing use of legislative history.

Still, two liberal Justices who authored a considerable number of majorities in both eras, Justices White and Stevens, used legislative history more often to support pro-employee results after 1986 than they had done before that time.\textsuperscript{74} Decisions authored by Justices White and Stevens, along with the record of Justices Ginsburg and Breyer, suggest that some liberal Justices may be inclined to invoke legislative history in the Rehnquist/Roberts years to advance their

\textsuperscript{73} For the difference between eras, t = .0003. The older conservatives (Justices Burger, Stewart, and Powell) had a coefficient of -25 during the Burger years, but the two other conservatives who served during the Burger period (Justices Rehnquist and O’Connor) had a coefficient of -21, also indicating a moderating association. Justice Rehnquist is the one conservative to have authored a substantial number of majorities in both eras—26 prior to 1986 and 13 since that time. His coefficient was -23 in the Burger era and -15 in the Rehnquist/Roberts years.

\textsuperscript{74} Justice White authored 42 majorities in the Burger years and 17 during the Rehnquist period. His coefficient changed from -89 to +62 between the two eras. Justice Stevens wrote 25 majorities for the Burger Court and has authored 31 majority opinions since 1986. His coefficient changed less dramatically, from -8 to +1, but it too shifted toward more frequent reliance on legislative history to favor employees.
preferred policy outcomes, consistent with our initial hypothesis. We consider a strategic explanation for this approach by the liberal Justices in our discussion below.

III. PRINCIPLED AND STRATEGIC USES OF LEGISLATIVE HISTORY

Although our results may warrant further development or analysis in a number of directions, we focus here on two aspects of our findings. Each aspect relates directly to the central hypothesis underlying our empirical inquiry—the prospect that liberal Justices may use legislative history on a systemic basis to advance their preferred ideological agenda.

First, Tables 3, 4, and 5 indicate that for six of the eight liberal Justices, legislative history reliance is associated with a moderating set of ideological results. The association is significant for two of the liberals (Justices White and Souter), and directional for four others (Justices Brennan, Marshall, Blackmun, and Stevens) and for the liberal Justices as a group. These results are important because they call into question our assumption about legislative history as an ideologically charged resource. In Part IIIA, we contend that there are principled, doctrinally based reasons why legislative history accompanying liberal pro-employee statutes is relied on so regularly by liberal Justices to support conservative pro-employer outcomes.

Second, Tables 5 and 6 suggest that legislative history usage has taken on a more politicized complexion in the years since 1986, for justices in both the liberal and conservative camps. We examine the possibility that this shift reflects the development of a Scalia Effect, based on Justice Scalia’s high-profile stance opposing legislative history reliance. By initially and persistently expressing his unqualified hostility to the use of legislative history, Justice Scalia has put his colleagues on notice that they should invoke this resource at their peril. Other justices may therefore decide whether to rely on legislative history with an eye toward retaining his support for their reasoning. In Part IIIB, we explore how this strategic factor has contributed
to an altered ideological pattern of legislative history usage for liberal justices and perhaps for conservatives as well.

A. Liberal Justices and Principled Reliance on Legislative History

We observed early on that legislative history accompanying employee protection laws is likely to include a considerable array of statements that explain, justify, or elaborate upon a fundamentally pro-employee set of legislative preferences. At the same time, the fact that these workplace statutes favor the legal interests of employees does not mean the enacted provisions or their accompanying legislative records are monolithic. Major federal workplace legislation is invariably a product of negotiation and deal-making among multiple participants over an extended period of time. The chief sponsors and bill managers for comprehensive regulatory schemes such as the NLRA, ERISA, and antidiscrimination laws cannot hope to navigate the politically sensitive internal procedures in each chamber without brokering or acceding to some tradeoffs among competing interests.

Congressional negotiation is reflected in the work product of authorizing committees and in the floor debates in both houses. Members understand they are voting on a bill that accords new rights and protections for employees as its major premise. They also recognize, however, that those rights and protections are being reconciled with the interests of private employers in maintaining a certain level of efficient and profitable operation, and the interests of public employers in avoiding undue burdens on the fulfillment of government’s obligations to its citizens and taxpayers.

Congress regularly seeks to accommodate such major and minor legislative objectives in furtherance of its policy-making agenda. With respect to employee protection statutes, the accommodation takes two basic forms. One is the insertion in text of an employer defense or
exemption that immunizes business or government from liability in certain settings.\textsuperscript{75} The other is compromise on a particular issue or provision that reflects give and take between supporters of employee and employer interests during the legislative process.\textsuperscript{76}

These two forms of textual adjustment are frequently accompanied by explanatory statements from the committees or individual members responsible for negotiating them. Thus, there is legislative history that justifies or elaborates on the meaning of employer defenses or exemptions included in the text. There also is legislative history chronicling or explaining the existence of a compromise between bill supporters and critics on the issue in question. In addition, the legislative record that attends enactment of an employee protection bill may suggest in a third, more oblique, way that a particular issue was resolved in favor of employer interests. We refer here to legislative history indicating that the right, protection, or remedy asserted on behalf of employees was not embraced or perhaps even referenced in committee reports and key floor statements promoting the language in question, and therefore that employees and their supporters may have overreached in their claims.

All three of these doctrinal categories may be thought of as pro-employer legislative history within a pro-employee statute, and all three are invoked with some regularity by liberal Justices to help explain or justify pro-employer results. Indeed, of nearly sixty pro-employer majorities relying on legislative history authored by the liberal Justices, some three-fifths fall

\textsuperscript{75} See, e.g., Title VII, 42 U.S.C. § 703(h) (protecting bona fide seniority systems); ADEA, 29 U.S.C. § 623(f) (protecting bona fide occupational qualifications based on age, and exempting decisions based on reasonable factors other than age); NLRA, 29 U.S.C. § 152(3), (11) (exempting supervisors and independent contractors from Act’s coverage).
\textsuperscript{76} See, e.g., 1991 Civil Rights Act, 42 U.S.C. § 1981a(a), (b) (providing compensatory and punitive damages for intentional discrimination but imposing limitations as to dollar amounts); Doe v. Chao, 124 S.Ct. 1204, 1209-10 (2004) (describing compromise on § 2(g)(4) of Privacy Act (5 U.S.C. § 552a(g)(4)) that guarantees $1000 damages award only to plaintiffs who suffered some actual damages); Mass. Mutual Life v. Russell, 473 U.S. 134, 139-46 (1985) (describing compromise on § 409 of ERISA (29 U.S.C. § 1109) that allows benefit plan but not plan fiduciary to be held liable for improper processing of benefits claims). See generally Martin Shapiro, LAW AND POLITICS IN THE SUPREME COURT 110 (1964).
into one or more of the categories identified above. In order to illustrate these patterns of reliance, we briefly discuss several Court decisions from each category.

1. Employer Defenses or Immunities

One important example of an employer defense is section 703(h) in Title VII of the 1964 Civil Rights Act, which protects employers when they apply different terms or conditions of employment pursuant to a bona fide seniority system. In *American Tobacco Co. v. Patterson*,\(^\text{77}\) Justice White for the majority concluded that Congress intended to exempt post-Act as well as pre-Act seniority systems,\(^\text{78}\) even though protecting post-Act systems would likely extend the effects of pre-Act discrimination against racial minorities. Justice White noted that section 703(h) did not distinguish on its face between pre- and post-Act seniority systems.\(^\text{79}\) He then reviewed in depth the drafting history of section 703(h), relying on several Senate floor exchanges among key participants to confirm that Congress meant for all bona fide seniority rights to be unaffected by the bill, even if this left black employees worse off than their more senior white counterparts.\(^\text{80}\)

A decade earlier, Justice Brennan relied on legislative history to help support the applicability of an employer defense under the NLRA. In *Beasley v. Food Fair of North Carolina*,\(^\text{81}\) the Court held that NLRA provisions added in 1947 excluding supervisors from the Act’s protections (thereby allowing employers to discharge supervisors on account of their membership in a union) also freed employers from liability under state laws that prohibited

Stotts, 467 U.S. 561, 580-82 (1984) (Justice White for majority, relying on legislative history of section 706(g) of Title VII, as limiting lower courts’ authority to award make-whole relief that is inconsistent with the terms of a bona fide seniority system).
termination based on union membership.\textsuperscript{82} Although the NLRA text was not entirely clear, Justice Brennan for the majority relied primarily on House and Senate committee reports to conclude that Congress’s dominant purpose in adding the new language was to avoid problems of divided loyalty by insulating employers from all efforts by state or federal agencies to make them treat their supervisors as employees.\textsuperscript{83}

More recently, in \textit{Albertson’s Inc. v. Kirkingburg},\textsuperscript{84} Justice Souter invoked legislative history to help explain why an employer could use noncompliance with federal safety regulations to justify its determination that a visually impaired truck driver was not a “qualified” individual with a disability under the Americans with Disabilities Act. The decision also involved other interpretive issues under the ADA,\textsuperscript{85} but on the question of the employee’s being “qualified,” Justice Souter relied on Senate and House committee reports to establish Congress’s understanding that federal safety rules would limit application of the ADA to individuals able to meet the relevant physical qualification standards.\textsuperscript{86}

These three cases are representative of many others in which liberal Justices invoke legislative history to help sustain the applicability of an employer exemption or defense. The history is used in some majority opinions to clarify the meaning of ambiguous text\textsuperscript{87} and in other instances to confirm that the text means what it seems to say.\textsuperscript{88} The Justices interpret the

meaning of employer defenses or exemptions under ERISA\(^9\) and some minor workplace-related statutes\(^9\) as well as the NLRA\(^9\) and federal antidiscrimination laws.\(^9\)

2. **Compromises Involving Competing Approaches**

The liberal Justices have repeatedly invoked legislative history to support pro-employer outcomes by demonstrating how this history reveals or confirms the existence of a negotiated arrangement among interested groups or legislators on a particular issue. In *Mohasco Corp. v. Silver*,\(^9\) Justice Stevens for the majority addressed the time requirements for filing Title VII charges. The Court reviewed at length the drafting history from both the 1964 Act and its 1972 amendments, concluding that a charge must be filed at the EEOC within 300 days even in states where the charge is initially brought to a state agency for consideration.\(^9\) In noting the development of a compromise that set 300 days as a firm limit, Justice Stevens referred to members’ competing interests of preserving remedial options for victims of discrimination, respecting the role of state agencies in resolving charges, and minimizing the burdens of having to defend stale or dormant claims.\(^9\)

Fourteen years later, the Court in *Landgraf v. USI Film Products*\(^9\) relied on legislative history to establish that two pivotal groups of bill supporters had in effect agreed to disagree on whether certain controversial 1991 amendments to Title VII should be applied retroactively. Justice Stevens for the majority conducted a careful review of earlier bill versions and Senate floor debates, concluding there was a broad understanding that no deal could be reached on the contentious issue of retroactivity but that neither side wanted this lack of agreement to derail the

\(^9\) 511 U.S. 244 (1994).
bill’s passage.97 The majority opinion went on to hold in favor of the traditional presumption against retroactivity, noting the absence of a congressional intent to overcome that presumption.98

In addition to finding legislative record evidence of Title VII bargains that favored employer legal positions, the liberal Justices have relied on such evidence with respect to a series of more minor workplace law statutes. In *Jackson Transit Authority v. Amalgamated Transit Union*,99 Justice Blackmun for the majority addressed the meaning of section 13(c) in the Urban Mass Transportation Act of 1964, which required states and localities to preserve collective bargaining rights when using federal funds to help purchase a privately owned transit company. The issue was whether section 13(c) permitted the union to sue in federal court for alleged violations; the majority concluded that while the text was ambiguous, the legislative history definitively resolved the matter against such a federal right of action.100 Justice Blackmun reviewed committee reports and floor debates at length, determining that section 13(c) was meant to promote a balanced regulatory scheme, accommodating state law to collective bargaining rights but *not* supplanting state labor law processes with a federal law of collective bargaining.101

More recently, Justice Souter in *Doe v. Chao*102 relied on legislative history accompanying the Privacy Act of 1974 to confirm that the statute’s award of $1000 in presumed damages to individuals adversely affected by a federal agency violation did not apply unless a

Roadway Express Inc., 511 U.S. 298, 304-09 (1994) (Justice Stevens) (relying on legislative history of 1991 Civil Rights Act to conclude that the supporters of a separate provision overriding a particular Supreme Court decision could not agree on whether the provision was to reach cases that arose before enactment; given their agreement to disagree, the traditional presumption against retroactivity was not disturbed).
100 Id. at 23-24.
101 Id. at 24-29.
victim suffered some actual damages. The majority pointed to an uncodified section of the Act that seemed to defer the question of presumed damages by assigning the matter to a newly established Privacy Protection Study Commission. But Justice Souter also invoked the Act’s drafting history to underscore the Court’s holding; he emphasized that the Senate bill’s provision authorizing presumed damages had been deleted in the final version.

Once again, these cases are illustrative of many more in which liberal Justices find persuasive evidence of a congressional deal in the legislative record, evidence that helps resolve a controversy in favor of the employer’s legal position. The decisions arise under comprehensive workplace regulation schemes besides Title VII, such as ERISA, OSHA, and the NLRA. Apart from the laws addressed in *Jackson Transit* and *Doe v. Chao*, legislative history identifying compromises has been used to support the employer’s legal position in several other similarly narrow statutes.

3. Overreaching by Employees

Finally, liberal Justices have frequently relied on legislative history to show that Congress simply did not go as far as employees and their advocates contend it did. Such uses of the legislative record differ from invoking committee commentary or drafting history to disclose or confirm the existence of a negotiated compromise—legislative history is being used here in a

\[\begin{align*}
103 & \text{Id. at 1209.} \\
104 & \text{Id. at 1209-10.} \\
108 & \text{See also *Firefighters v. Stotts*, supra note 80, 467 U.S. at 580-82 (Justice White, discussing assurances on limits of court’s remedial powers that Title VII sponsors and managers kept giving to bill’s critics and undecided members during floor debates).} \\
\end{align*}\]
way more akin to the maxim of the dog that didn’t bark. The Court in this third group of
decisions relies on legislative history to demonstrate or reinforce the implausibility of Congress
having extended a right, remedy, or procedure as sought by employees, because Congress never
endorsed or in some instances even contemplated such an extension when considering the matter
in its deliberative process.

In Allied Chemical Workers v. Pittsburgh Plate Glass Co., Justice Brennan for the
majority addressed whether the NLRA required an employer to bargain with its union over
benefits levels for retirees. Rejecting the agency’s interpretation that retirees’ benefits were a
mandatory subject of bargaining, the Court held that mandatory bargaining covered only the
terms and conditions of employment for current employees. Justice Brennan relied heavily on
committee reports to show how Congress intended that the term “employee” not be stretched
beyond its ordinary meaning—individuals working for another for hire, not those who for
whatever reason have ceased to do so.

A decade later, the Court in Kremer v. Chemical Construction Co. invoked legislative
history when holding that Title VII did not repeal other provisions of federal law and thus did not
deny res judicata or collateral estoppel effect to a state court judgment affirming that an
employment discrimination claim was unproved. Justice White for the majority reviewed at
length the committee report commentary and floor debate accompanying the 1964 Act and 1972
amendments. He concluded that while members expressed concerns about too readily

114 Id. at 470-76.
assuming the adequacy of state employment discrimination remedies, they never envisioned an absolute right to relitigate issues resolved by state courts.\footnote{Id. at 473-76. See also Kaiser Steel Corp. v. Mullins, 455 U.S. 72, 86-88 (1982) (Justice White, relying on legislative history to support holding that 1980 ERISA amendments do not repeal by implication earlier-enacted defenses claimed by employer).}

In \textit{Mead v. Tilley},\footnote{490 U.S. 714 (1989).} the Court confronted the question of whether an ERISA section providing for the orderly distribution of defined benefit plan assets upon termination also created a right for plan participants to recover anticipated benefits not otherwise protected. Justice Marshall for the majority focused on the conference committee deliberations, because the allocation scheme provision at issue had been cobbled together in conference by combining features of the House and Senate bills.\footnote{Id. at 723-24.} He concluded that nothing in the conference report and its statement of managers suggested or implied that the committee intended to make this section a source of benefit entitlements rather than simply a scheme for the distribution of plan assets.\footnote{Id.}

More recently, in \textit{United States v. Burke},\footnote{504 U.S. 229 (1992).} the Court had to decide whether backpay awards under Title VII were excludable from gross income under the Internal Revenue Code. Justice Blackmun for the majority first determined that the relevant revenue code provision excluded only income for tort-like damages received on account of personal injuries;\footnote{Id. at 233-37.} he then concluded that Title VII’s pre-1991 focus on restorative back pay awards did not qualify within the meaning of the tax code exclusion.\footnote{Id. at 241.} In reaching this conclusion, Justice Blackmun invoked legislative history from the 1972 amendments characterizing the remedial scheme as no more than restorative, and also relied on committee reports accompanying the 1991 amendments

which described the newly added monetary damages remedies as taking the statute beyond its old equitable relief limitations.122

As was true for our two prior categories, there are many more decisions in which liberal Justices rely on legislative history to help explain why the right or remedy sought by employees would exceed what Congress meant to provide for in its legislative approach. Although the examples presented in text arose under three major workplace protection statutes—NLRA, ERISA, and Title VII123—there are numerous instances in which liberal Justices have relied on the legislative history of more minor statutes to help rebut such overly ambitious claims by employees and their advocates.124 In this regard, legislative record evidence is most often used to confirm or reinforce the Court’s conclusion that the text simply does not cover what employees’ counsel wants it to, but occasionally the majority has invoked legislative history to help establish such limits in the face of ambiguous text.125

4. Alternate Explanations Considered

The doctrinal categories we have identified are present in most decisions where liberal Justices invoke the legislative record to support results favorable to employers. There are a number of pro-employer decisions in which the use of legislative history does not fall into any of

122 Id. at 239, 241.
125 See, e.g., Herb’s Welding Inc. v. Gray; BATF v. Federal Labor Relations Authority.
these categories. Nonetheless, our three doctrinal approaches offer a principled, law-based explanation for why legislative history accompanying liberal statutes is regularly relied on by liberal Justices to help justify conservative outcomes.

It is, of course, possible that non-doctrinal factors may also be contributing to our findings. One potential factor involves the power of assigning majority opinions. Liberal Justices may follow divergent ideological patterns of legislative history reliance depending on whether they are assigned to draft a majority opinion by the usually conservative-voting Chief Justice (Justices Burger or Rehnquist during this period) or by the most senior associate justice, who would be a fellow liberal during these years. The assumption here would be that if the Chief Justice has voted with them (and hence presumably assigns them the opinion), the liberal Justices’ reliance on legislative history should be linked to pro-employer results substantially more often than pro-employee outcomes. Conversely, if the Chief has not voted with them (and hence they are presumably self-assigning), the liberal Justices’ use of legislative history should much more likely be associated with pro-employee rather than pro-employer results.

Were ideological patterns of legislative history usage to vary based on whether the Chief Justice exercised the power of assignment, this variation might well conceal the genuine strength of policy preferences in explaining the liberals’ regular use of legislative history to support conservative outcomes. In fact, however, we found no such variation. Liberal Justices do rely on legislative history more heavily in self-assigned majorities when compared with majorities

---

127 From 1969 to 2006, the senior associate justice assigning majority opinions when the Chief was on the other side would almost invariably have been Justice Brennan (1969 to 1990); Justices White, Marshall, or Blackmun (1990 to 1994); or Justice Stevens (1994 to 2006).
assigned by the Chief Justice. But liberals use legislative history to help support pro-employer outcomes slightly more often than they do to help explain pro-employee results whether the majorities are assigned by the Chief or by fellow liberal Justices. Further, because the Chief Justice is on their side in four-fifths of the majorities authored by the liberal Justices, it is especially noteworthy that legislative history is used in these majorities to support pro-employer results and pro-employee outcomes at similarly substantial levels. Given these findings, there is no reason to believe that our doctrinal account of liberal Justices invoking legislative history to help justify conservative results is shaped or even substantially influenced by control over the assignment power.

Apart from the institutional factor of who assigns majority opinions, liberal Justices may act from more directly instrumental motives. One possibility is that the liberals adapt their reasoning approach based on their appreciation for how legislative history from pro-employee workplace protection statutes can help them to support preferred policy outcomes in important cases. The contention is that liberal Justices may seek to enhance their “major” policy preference by promoting as a “minor” methods preference that legislative history reliance is principled and impartial—often leading toward results contrary to their ideological interests. The methods preference is deemed to be minor because the pro-employer decisions it helps

---

128 When the Chief Justice joins them in the majority, liberal Justices rely on legislative history 47 percent of the time (121 of 257 decisions). When the Chief Justice is not in the majority, liberal Justices rely on legislative history 63 percent of the time (41 of 65 decisions).

129 Liberal Justices use legislative history in 53 percent of the 103 pro-employer majority opinions joined by the Chief Justice and in 43 percent of the 133 pro-employee majorities that the Chief Justice joins. When the Chief Justice is not in their majority, liberals rely on legislative history in 75 percent of their four pro-employer majorities and in 63 percent of their 56 pro-employee majorities. Details of these and all other calculations are on file with the authors.

130 See note 129, supra. The difference between legislative history usage in pro-employer and pro-employee decisions when the Chief Justice assigns is not close to significant (t = .38). The Chief Justice’s assignment control for 80 percent of all majority opinions in our dataset (257 of 322) is consistent with findings reported in other Supreme Court studies. See Epstein & Knight, supra note 21, at 128 and sources cited therein.

131 Cf. Richard A. Posner, The Supreme Court 2004 Term: A Political Court, 119 Harv. L. Rev. 31, 49-52 (discussing how justices in constitutional cases may declare they are voting against their policy interests to enhance their image as principled and neutral).
justify rarely carry substantial policy implications. Judge Richard Posner has suggested that the justices sometimes engage in this sort of strategic behavior at a subconscious level with regard to constitutional matters—voting against their personal values or preferences in cases with relatively minor policy consequences so that they may appear “principled” on their larger approach to an area of constitutional doctrine or a method of constitutional interpretation.\footnote{See id., at 50-51 suggesting that Justice Scalia’s vote to protect flag burning under the First Amendment had very limited impact in policy terms but in effect helped promote his textualist approach to constitutional analysis, an approach that could (if adopted by a majority) make overruling of \textit{Roe v. Wade} more likely.}

It is difficult to accept the persuasiveness of this contention in the instant setting for two reasons. First, if the liberal Justices regularly operated in such an instrumental fashion—even if mostly on an oblique or semi-conscious basis—one would expect to find some evidence of strategic ruminations in the personal notes or memos they compiled during decades of service on the Court. To our knowledge, scholarly examination of the Brennan, Marshall, Powell, and Blackmun papers has not produced such evidence. More importantly, there is little reason to believe that the justices anticipated—or could have anticipated on a systemic basis—which workplace law decisions were likely to have substantial policy consequences and which were not. Liberal Justices have certainly invoked legislative history to help justify major pro-employee decisions under leading regulatory schemes such as Title VII\footnote{See, \textit{e.g.}, Steelworkers v. Weber, 443 U.S. 193, 202-08 (1979) (Justice Brennan, using legislative history to help justify lawfulness of voluntary affirmative action); Burlington Northern & Santa Fe Rwy. Co. v. White, 126 S.Ct. 2405, 2417 (2006) (Justice Breyer, using legislative history to help support broad coverage under anti-retaliation provision of statute).} and the NLRA.\footnote{See, \textit{e.g.}, Complete Auto Transit Inc. v. Reis, 451 U.S. 401, 408-15 (1981) (Justice Brennan, using legislative history to help justify preclusion of damages actions against individual employees for wildcat strike); NLRB v. Town \& Country Elec., 516 U.S. 85, 91 (1995) (Justice Breyer, using legislative history to help justify “salting” as lawful union organizing technique under Act).} But liberals also have relied on legislative history to help support pro-employer results of
considerable consequence—under those two comprehensive statutes\textsuperscript{135} and various others as well.\textsuperscript{136}

A related but more complex account of strategic motivation offered by political scientists Lee Epstein and Jack Knight suggests that legislative history is one of several legal factors operating as a constraint on justices’ policy preferences, one they feel obligated to follow at times even when it leads to outcomes they would not ordinarily prefer.\textsuperscript{137} On this theory, the original intent of statutory drafters, like the principle of \textit{stare decisis}, is a presumptively impartial doctrine that encourages liberal Justices to modify their policy preferences so as to keep faith with various audiences, especially the public and the legal community which expect them to reach decisions based on legitimate rule-of-law norms.\textsuperscript{138} Epstein and Knight do not regard fidelity to these norms as a driving or primary goal of the justices, but rather as operating to provide a necessary framework for their choices and at least on occasion to shape the outcomes they reach.\textsuperscript{139}

We find Epstein and Knight’s account both more appealing and also more consistent with the doctrinal explanations we have offered. Statutory cases heard by the Court can often be decided in either direction on plausible legal grounds, and the justices have before them many reasoned arguments derived from a range of interpretive resources besides legislative record

\textsuperscript{137} See \textit{EPSTEIN & KNIGHT, supra} note 21, at 40-45.

\textsuperscript{138} See \textit{id} at 40, 45, 157-59, 163-64.

\textsuperscript{139} See \textit{id} at 45, 165-67, 172, 177 (discussing evidence that doctrine of \textit{stare decisis} structures and influences Court’s decisions). For an insightful recent discussion of how judges’ legal training and individual professional experiences may strengthen their interest in adhering to doctrinal or principled justifications, \textit{see} Lawrence Baum, \textit{JUDGES AND THEIR AUDIENCES} 88-117 (2006).
evidence. Assuming that individual values and policy preferences do influence the weight or priority given to these resources, the often subconscious nature of such values and preferences makes it difficult to discover whether invocation of legislative history in a majority opinion actually helped motivate a result or simply helped explain it.\textsuperscript{140}

At the same time, we cannot overlook the volume and proportion of workplace law decisions in which liberal Justices rely on legislative history as an aid in justifying their departure from presumed\textsuperscript{141} policy preferences. The extent to which reliance is associated with pro-employer outcomes invites an explanation that goes beyond viewing legislative history as a merely instrumental or episodic constraint. In this regard, it is worth noting that prior to 1986, conservative justices also regularly relied on legislative history to help justify results contrary to their preferred policy outcomes.\textsuperscript{142} Further, the three doctrinal categories implemented by liberal Justices in the workplace law area have been invoked by at least some of these same liberals to support “conservative” results when applying other federal statutes.\textsuperscript{143} In short, the liberal

\textsuperscript{141} Our reference to “presumed” preferences is meant to acknowledge that liberal justices—especially those with voting records closer to a 50:50 split (see note 44 \textit{supra})—will not automatically favor a pro-employee outcome in a particular case. A liberal justice’s reliance on legislative history in a decision that reaches a pro-employer result may at times reflect that the justice’s policy preference accords with the legislative record evidence being invoked, rather than that the legislative record is itself serving to constrain that preference. Nonetheless, given the voting patterns of these eight liberal justices—six of whom favor the legal positions of employees and unions over three-fifths of the time under both the Spaeth issue codes and our dataset—it is appropriate to assume that the liberals are regularly using legislative history to help explain majority opinions that are inconsistent with the authors’ preferred policy outcomes.

\textsuperscript{142} See Table 6, \textit{supra}; notes 71-72 and accompanying text, \textit{supra}. Although the conservatives were relying on legislative history that was consistent with the overall pro-employee thrust of the statutes, their tendency to reach more liberal opinions when using this resource than when not doing so supports our broader notion that many justices view legislative history as a principled interpretive asset, justifying their constrained policy choices on more than an anecdotal basis.

Justices’ recurring reliance on legislative history as an impartial interpretive asset may reflect a commitment that is pervasive and principled rather than occasional and opportunistic.

5. Interpretive Philosophy

Based on our earlier findings, the liberal Justices are significantly more likely to rely on legislative history than their conservative counterparts. The liberals’ favorable stance toward this history is distinctive in both eras: liberal Justices have relied on legislative history 20 percent more often than conservative Justices since 1986, and the differential was 16 percent for the Burger Court.

The liberals’ more sympathetic attitude toward legislative history may well signify a difference in judicial beliefs about how best to respect the lawmaking supremacy of Congress. Liberal Justices have tended to regard efforts to discern and apply the intent of key legislative subgroups or individual players in terms of furthering their own constitutional role as junior partner in the lawmaking enterprise. They believe that the record of such intent can be evaluated in a suitably cautious manner, and therefore that legislative history constitutes relevant enforcement actions were authorized only to seek injunctive relief, not for wholly past violations); Train v. Colorado PIRG, 426 U.S. 1, 11-23 (1976) (Justice Marshall) (relying on legislative history to show Clean Water Act compromise in which Atomic Energy Commission’s authority to regulate radioactive effluents from nuclear power plants was not extended to EPA Administrator as well).

144 See Table 5 supra: cumulative findings indicate that liberal Justices rely on legislative history in 162 of 322 majorities, or 50.3 percent, while conservative Justices rely on legislative history in 69 of 220 majorities, or 31.4 percent. This difference is highly significant (t = .0000).

145 In the Burger era, liberal Justices used legislative history in 57.6 percent of their majorities (102 of 177) while conservative Justices relied on this resource in 44.2 percent of theirs (42 of 95), a significant difference (t = .0116). See also Jorge L. Carro & Andrew R. Brann, The U.S. Supreme Court and the Use of Legislative Histories: A Statistical Analysis, 22 JURIMETRICS J. 294, 302, 306 (1982) (finding, based on limited sample, that liberal Justices cite to legislative history substantially more than conservative Justices). In the Rehnquist/Roberts years, liberal Justices invoked legislative history in 41.4 percent of their majorities (60 of 145) while conservative Justices relied on legislative history in 21.6 percent of theirs (27 of 125), again a significant differential (t = .0001). Although the persistent refusal by Justices Scalia and Thomas to invoke legislative history in majority opinions distinguishes them from all other justices, three other conservatives (Kennedy, Rehnquist, Powell) rank as the next lowest legislative history users. Of the nine most frequent users, seven are liberals. See generally Brudney & Ditslear, supra note 50, at 222-23.

and probative evidence of what Congress was seeking to accomplish.147 This approach distinguishes them from Justices Scalia and Thomas, who have often maintained that in order to be properly deferential to Congress’s constitutional role as a unified lawmaking body, courts should avoid or minimize reliance on the unenacted intentions expressed by various subgroups within that body.148

Scholars in both law and social science have contended that this difference in attitudes must be ideologically driven—that a judge’s willingness to draw on legislative background evidence is inevitably influenced by the ideological thrust of the evidence itself.149 Our findings on the ideologically neutral aspects of legislative history reliance by liberal Justices suggest that interpretive philosophy may be a more important factor than previously acknowledged.

As is well-recognized, most major bills that become laws undergo considerable changes between introduction and final enactment, due to formal divisions in power between the executive and legislative branches and also various procedural obstacles within Congress itself. Complex or controversial legislative proposals are usually modified (and occasionally recast) by principal sponsors or managers in order to accommodate the concerns of wavering colleagues or to co-opt segments of the opposition. Because substantial adjustment in text—both before and after a bill’s introduction—is the rule rather than the exception, committee or floor commentaries that accompany the particular stages of language modification are capable of shedding light on

whatever qualitative changes have taken place. Put succinctly, legislative bargains are a well-accepted feature of American lawmaking, and legislative history may illuminate a bargain’s existence or help explain some of its details.

The three doctrinal categories of legislative history invoked by liberal Justices to help explain conservative results may be understood as addressing distinct aspects of this bargaining process. First, legislative history describing and elaborating on employer exemptions or defenses amplifies what is often the earliest form of textual adaptation. Drafters and key initial sponsors incorporate certain protections for employer interests before bill language is even made public, based on discussions among supporters as well as potential opponents or undecideds. Second, legislative record evidence reflecting the existence or contours of subsequent compromises is likely to be found in the post-introduction drafting history. This record of explicit bargains reached during a bill’s voyage through Congress indicates when and perhaps why certain employee rights or protections were traded away or not secured after having been advocated by a key group of supporters. Finally, legislative history signifying employee overreach may be viewed as identifying an implicit bargain among the major players. Even on matters where conscious give and take did not occur, deliberative dialogue viewed in context indicates that Congress never meant to address the issue now raised by employee’s counsel, or to go as far as is being advocated.

Our conclusion—that many justices are invoking legislative history to help understand different dimensions of the bargaining process—is at odds with Justice Scalia’s critique of such history as deeply unreliable with respect to what Congress was thinking or intending when it voted on a bill or provision of text.150 Professor John Manning has elaborated on Justice Scalia’s

150 See Antonin Scalia, A MATTER OF INTERPRETATION: FEDERAL COURTS AND THE LAW 31-35 (1997). Justice Scalia further maintains that legislative history is intrinsically illegitimate when it is invoked as a basis for imputing
position, arguing that congressional players bargain “in complex and often unknowable ways about a statute’s wording,”151 and that because purposivism—which includes reliance on legislative history—cannot plausibly claim to capture the legislative preferences underlying bargained-for text, it furnishes no special insights into the realities of legislative compromise.152

The liberal Justices in our dataset plainly do not embrace this textualist vision. An assessment of their key normative assumption, that legislative history may in appropriate circumstances be imputed to Congress as a whole,153 is beyond the scope of this article. In descriptive terms, however, it is worth emphasizing the frequency with which these justices invoke legislative record evidence to help set limits on the coverage and protections available under pro-employee statutory regimes. The liberals’ regular and nuanced reliance on legislative history reflects their belief that this history can help illuminate the dimensions and details of complex legislative deals. More important, the fact that these justices are willing to follow so frequently a legislative history trail leading away from their preferred policy perspectives indicates the principled nature of their interpretive approach.

B. Liberal Justices and Strategic Behavior—A Scalia Effect

In determining that legislative history usage has aligned somewhat more closely with the justices’ ideological preferences since 1986, we presented our findings in Part II based on a division between the Burger era and the Rehnquist/Roberts period. However, when considering

---

153 See, e.g., Stephen Breyer, ACTIVE LIBERTY 85-88 (2005); Bank One Chicago v. Midwest Bank & Trust Co., 516 U.S. 264, 276-77 (1996) (Stevens, J. concurring); United States v. Thompson/Center Arms Co., 504 U.S. 505, 516 n.8 (1992) (Souter, J., plurality). See also Lawrence Solan, Private Language, Public Laws, 93 GEO. L.J. 427, 437-53 (discussing how intent is imputed to legislatures and other group actors on philosophical and linguistic grounds); Lord Hoffmann, The Intolerable Wrestle with Words and Meanings, 114 S.A.L.J. 656, 669 (1997) (explaining that high profile ministerial explanation of ambiguous text, given on floor of House of Commons and from which no member dissents, will at times be the best evidence of what Parliament must have understood it was approving).
shifts in the justices’ approaches to legislative history as an interpretive asset, a more salient development than the ascension of Chief Justice Rehnquist is the arrival of Justice Scalia. Prior to joining the Court, Scalia had voiced reservations about the reliability of legislative history while serving as an appellate judge, and his criticisms generated some reaction from Senators during his confirmation hearings. Upon becoming a Justice in the 1986 Term, Justice Scalia began expressing relentless opposition to colleagues’ use of legislative history; he has maintained this outspokenly critical stance to the present day.

1. Justice Scalia’s Line in the Sand

During his first three terms on the Court, Justice Scalia authored a series of separate opinions—including at least eight concurring in the Court’s judgment—in which he expressly attacked or questioned the majority’s reliance on legislative history. In these separate writings, Scalia insisted that the Court should never use legislative history to confirm or reinforce the plain meaning of text, that legislative history is very likely to be generated for strategic or insincere reasons and in any event is highly unreliable, and that courts must

---

discover a statute’s purpose or intent only from analyzing the text and not from the vagaries of a legislative record drafted or understood by at best small subgroups of members.\footnote{See Bock Laundry; Union Gas; Johnson v. Transportation Agency, 480 U.S. 616, 670-72 (1987) (dissenting opinion).}

Recently, he opposed according differential probative weight to various forms of legislative history, re-stating his belief that neither legislative commentary of any kind nor the language modifications accompanying a bill’s enactment should be admissible at all in the interpretive enterprise.\footnote{See Hamdan v. Rumsfeld, 126 S.Ct. 2749, 2815-17 (2006) (dissenting opinion).}

Liberal justices at times have pushed back against the Scalia critique, defending the basic utility of legislative history in their majority decisions\footnote{See, e.g., Conroy v. Aniskoff, 507 U.S. 511, 518 n.12 (1993) (Stevens, J.); Thompson/Center Arms Co., 504 U.S. at 516 n.8 (Souter, J., plurality); Wisconsin Pub. Intervenor v. Mortier, 501 U.S. 597, 610-12 n.4 (1991) (White, J.).} or in separate opinions.\footnote{Bank One Chicago, 516 U.S. at 276-78 (Stevens, J., concurring); West Virginia Hospitals v. Casey, 499 U.S. 83, 112-115 (1991) (Stevens, J. dissenting). See also Breyer, ACTIVE LIBERTY, supra note 153, at 85-88, 91-95 (defending legitimacy and utility of legislative history in academic setting).}

Nonetheless, Justice Scalia’s regularly voiced absolutist stance has had an impact over time. Faced with his outspoken opposition (subsequently supported by Justice Thomas),\footnote{Justice Thomas has often endorsed Justice Scalia’s refusals to join legislative history sections of a majority opinion. See, e.g., Thunder Basin; Darby; Reves. In addition, Scalia and Thomas have steadfastly refused to invoke} some justices seem to have...
concluded even if subconsciously that invoking legislative history in certain settings was not worth the risk of losing support for one’s majority opinion or inviting a sharply-worded concurrence.168

In examining why liberal Justices’ use of legislative history has been somewhat more congruent with their policy preferences after 1986, we considered the possibility that liberals may simply have become more committed to or adept at employing such history to advance their ideological values. There is, however, no apparent reason to believe that liberal Justices would adopt a more ideological position toward this interpretive resource after Justice Scalia’s arrival, especially given our overall findings regarding their majority opinions since 1986.169 Instead, we hypothesize that strategic considerations related to retaining Justice Scalia’s support may better account for shifts in opinion-writing approaches by liberal members of the Court.

2. Liberal Justices’ Exercise of Legislative History Restraint

Our starting point is that justices wish to avoid alienating unnecessarily a colleague who has voted with them in Conference. Given Justice Scalia’s relentless objections to legislative history, some liberals may be reluctant to invoke that resource when authoring pro-employer majorities they expect Justice Scalia to join. If these justices refrain from using legislative history in a sufficient number of pro-employer majorities, their remaining pattern of reliance will

---

169 See Table 3 supra (reporting that liberals since 1986 have continued relying on legislative history to help justify the same proportion of conservative as liberal outcomes); Tables 4, 6 supra (reporting that liberals since 1986 have favored pro-employee over pro-employer results by a two to one margin in their opinions, whether invoking or ignoring legislative history).
acquire a more pro-employee complexion. As we now show, this strategic hypothesis receives considerable support from the pro-employer majority opinions of several liberal Justices. Our projected Scalia effect also is consistent with how often liberal Justices overall have used legislative history when Justice Scalia joins their majorities as opposed to when he does not.

We reported in an earlier article that Justices White and Stevens used legislative history significantly less frequently during the Rehnquist years than they had in the Burger era.\(^{170}\) For our purposes, the sharp decline in reliance after 1986 is especially instructive with respect to their pro-employer majority opinions. Out of twenty-two conservative majorities joined by Justice Scalia that were authored by liberal justices and did not invoke legislative history, three-fifths were majorities authored by Justices White or Stevens.\(^{171}\)

During the Burger era, sixteen of Justice White’s eighteen pro-employer majorities relied on legislative history. By contrast, after Justice Scalia’s arrival, only one of Justice White’s nine pro-employer majorities invoked legislative history, and Justice Scalia joined seven of White’s eight pro-employer majorities that did not make use of such history.\(^{172}\) The shift for Justice Stevens, while not as dramatic, is still revealing. During the Burger period, Justice Stevens relied on legislative history to help justify seven of his fifteen conservative majorities; after 1986

\(^{170}\) See Brudney & Ditslear, supra 50, at 223. When omitting these justices’ majority opinions in pure constitutional decisions, and adding decisions from the first Roberts term, Justice White went from using legislative history in 62 percent of his majorities (26 of 42) during the Burger Court to 18 percent (3 of 17) after 1986, while Justice Stevens’ rate of reliance declined from 48 percent (12 of 25) to 32 percent (10 of 31). Justice White’s differential is highly significant (t = .0008) while the difference for Justice Stevens approaches significance (t = .099).

\(^{171}\) Of the twenty-two pro-employer majorities referred to in text, Justice White authored seven and Justice Stevens six. The remaining nine were written by Justices Breyer (3), Ginsburg (2), Souter (2), Blackmun (1), and Marshall (1). A list of all 22 majorities is on file with the authors and may be derived from the tables on Professor Ditslear’s website, referred to at note 35 supra.

\(^{172}\) In the eighth pro-employer majority, Mackey v. Lanier Collection Agency, 486 U.S. 825 (1988), Scalia joined the dissent, id. at 841.
he invoked this resource to help explain four of his twelve conservative majorities. Justice Scalia
joined six of the eight conservative Stevens majorities that did not use legislative history.173
Moreover, in two of Justice Stevens’ four conservative majorities that did rely on legislative
history, Scalia authored concurrences criticizing the majority’s use of this resource.174

To be sure, a sharply diminished reliance on legislative history in pro-employer
majorities written after 1986 does not establish that Justices White and Stevens adjusted their
reasoning in order to retain Justice Scalia’s vote. One plausible alternative explanation is that the
prevailing litigants before the Court in these cases failed to raise substantial legislative history
arguments, and thus the majority authors had no occasion even to consider exercising restraint.
We explored this possibility by reviewing the merits briefs filed by the parties, and where
applicable the Solicitor General,175 for all twenty-two of the pro-employer majorities joined by
Justice Scalia. What we found tends to reinforce our hypothesis as to the presence of a Scalia
effect.

In eight of the twenty-two decisions in question, the side that prevailed before the Court
did not seriously rely on legislative history in its merits briefs.176 In the other fourteen decisions,
however, the majority declined to invoke legislative history despite the fact that the prevailing
party, at times supported by the Solicitor General, relied explicitly and often substantially on a
legislative history argument. Five of these decisions—all five-to-four majorities—were authored

173 In the two pro-employer majorities he did not join, Justice Scalia authored a dissent in one decision (De Buono
v. NYSA Med. Services Fund, 520 U.S. 806, 816 (1997)), and filed a statement concurring in the judgment in the
other case (CIR v. Schleier, 515 U.S. 323, 337 (1995)).
174 See Landsgraf v. USI Film Products, 511 U.S. 244, 287-88 (1994); Rivers v. Roadway Express, 511 U.S. 298,
314 (1994). In the other two pro-employer majorities relying on legislative history, Justice Scalia joined one
opinion (Laborers’ Health Trust v. Advanced Lightweight Concrete, 484 U.S. 539 (1988)) and joined a dissent in the
other (Bartnicki v. Vopper, 532 U.S. 514, 541 (2001)).
175 The Solicitor General participated at the merits stage in fourteen of these twenty-two cases, either as a party or
amicus.
176 In three of these eight decisions, there were no substantive legislative history arguments at all. In the other five,
the losing side relied on legislative history as part of its argument but the winning side did not. We assumed
arguendo that in this setting the Court’s decision not to rely on legislative history was attributable to the history’s
failure to support the majority’s reasoning rather than to the majority’s interest in avoiding reliance.
by Justice White. Four decisions—two unanimous and two with dissents filed—were written by Justice Stevens. Thus, in five of seven White majorities and four of six Stevens majorities favoring employers that Justice Scalia joined, the majority authors did not invoke legislative history even though the prevailing side argued strongly for such reliance.

Intriguingly, Justice Breyer authored three of the remaining five pro-employer majorities that did not invoke legislative history in the face of substantive reliance on this resource by the prevailing party. The absence of legislative history use in those three decisions lends a distinctly liberal tint to Breyer’s relatively small set of majorities invoking legislative history.

It is worth noting that Justices Stevens, Breyer, and White have been outspoken advocates for the reliability of legislative history, explicitly rejecting Justice Scalia’s critiques on this score. Perhaps because their beliefs on the value of legislative history are well-established, they see little to be gained by vexing Scalia when he has voted with them, at least when they conclude the majority’s result can be adequately justified without having to rely on such history. Accordingly, it seems reasonable to suggest that Justice Breyer—like Justices

180 See Table 5 supra and accompanying discussion (reporting Justice Breyer’s five majorities that rely on legislative history are substantially more liberal than his nine majorities that do not). If even two of the first three majorities cited in note 179 had relied on substantive legislative history, Breyer would then have authored four of seven pro-employee majorities using legislative history and five of seven pro-employer majorities invoking such history, making his majority opinions relying on substantive legislative history more conservative or pro-employer than his majorities not relying on that resource.

181 See sources cited in notes 165 and 166 supra.
White and Stevens—may be forgoing legislative history reliance in certain cases as a form of “preemptive accommodation”\(^\text{182}\) in order to retain Justice Scalia’s support.

Our findings with respect to these subsets of pro-employer majorities constitute only a preliminary showing of Justice Scalia’s impact on certain liberal justices. The twenty-two majorities without legislative history, for instance, represent one-half of the pro-employer decisions written by liberal Justices since 1986, but a mere fifteen percent of all majorities authored by liberals during that period.\(^\text{183}\) A more complete demonstration would require at minimum reviewing briefs from hundreds of additional cases, a project for another article.\(^\text{184}\) There are, however, several further aspects of our dataset that tend to indicate Justice Scalia’s implacable stance on legislative history has influenced patterns of reliance by his liberal colleagues.

First, liberal Justices as a group rely on legislative history less than one-third of the time when Justice Scalia joins their majorities but in nearly three-fifths of the cases where he agrees with the result yet writes a separate concurring opinion.\(^\text{185}\) Justice Scalia’s refusal to endorse the majority opinion may not be due to the presence of a legislative history argument, and his joining

\(^{182}\) See Forrest Maltzman et. al., Crafting Law on the Supreme Court 96-98 (2000). Maltzman and his co-authors discuss both preemptive and responsive accommodation in the context of substantive differences among the Justices, but preemptive accommodation may also occur for methodological reasons, especially when one Justice’s position is presented in such relentlessly uncompromising terms.

\(^{183}\) The liberal Justices have authored 145 majorities from the 1986 Term through the 2005 Term; see Table 6 supra. Justice Scalia has participated in all but one of those cases. See Chao v. Mallard Bay Drilling, 534 U.S. 235, 236 (2002). Of the 145 decisions, 90 reached pro-employee outcomes, 45 pro-employer outcomes, and 10 were indeterminate. See Table 3 supra (identifying cases with pro-employee and pro-employer outcomes).

\(^{184}\) It would be helpful to consider prevailing parties’ positions on legislative history reliance in pro-employer decisions not joined by Justice Scalia and in pro-employer decisions that he joined, as well as making some comparisons with party briefs in the period before 1986. Further, unlike Justices White and Stevens, Justices Blackmun and Brennan did not reduce their legislative history reliance in majorities written after Scalia joined the Court. And unlike Justice Breyer, Justice Souter has invoked legislative history in a number of pro-employer majorities joined by Justice Scalia. The factors influencing different justices at various times are complex and case-specific, and we do not wish to oversimplify what accounts for decisions about judicial reasoning.

\(^{185}\) Liberal Justices rely on legislative history in 31 percent of the 88 majorities that Scalia joins, but in 58 percent of the 24 majorities where he concurs separately; that difference is significant (t = .0002). The liberals also rely on legislative history in 58 percent of the 33 majorities from which Justice Scalia dissents in whole or in part.
the majority is unlikely to be a function simply of the majority’s silence on legislative history matters. Still, the gap is large enough to suggest that most liberal Justices\textsuperscript{186} view legislative history as an interpretive asset to be deployed with some caution when Scalia is on their side. That caution is presumably encouraged by the fact that almost half of Scalia’s fourteen concurrences in this setting do criticize the majority’s reliance on legislative history.\textsuperscript{187}

Second, looking at pro-employee majorities authored by liberal Justices, legislative history reliance is significantly higher in close cases than in unanimous decisions.\textsuperscript{188} Liberals seem comfortable invoking legislative record evidence in narrow pro-employee majorities where Justice Scalia is unlikely to vote with them,\textsuperscript{189} but they are more reluctant to make use of this resource in the unanimous decisions favoring employees that Scalia does join.\textsuperscript{190} Once again,

\begin{itemize}
  \item Of the 88 majorities that Justice Scalia joined, five liberal Justices authored ten or more each: Stevens (19), Souter (16), Blackmun (13), White (13), and Ginsburg (10). Reliance on legislative history ranged from 37-38 percent (Blackmun and Souter) to 30 percent (Ginsburg) and down to 15-16 percent (White and Stevens). Of the 24 majorities with which Scalia concurred separately, three liberal Justices authored four or more: Stevens (7), Blackmun (4), and Marshall (4). Reliance on legislative history here ranged from 75 percent (Blackmun and Marshall) to 57 percent (Stevens). Justices Brennan and Breyer each authored a relatively small number of majorities out of the 112 discussed in this footnote—six and nine respectively.
\end{itemize}

\begin{itemize}
  \item The liberal Justices relied on legislative history in 60 percent of fifteen close decisions reaching pro-employee results, but in only 31 percent of fifty-four unanimous decisions favoring employees, a significant difference ($t = 0.011$).
\end{itemize}

\begin{itemize}
  \item Of the nine close pro-employee majorities in which liberal Justices relied on legislative history, Scalia joined two. See Empire Healthchoice Assur. Inc. v. McVeigh, 126 S.Ct. 2121 (2006) (Ginsburg); Loeffler v. Frank, 486 U.S. 549 (1988) (Blackmun). He dissented on the seven other occasions.
\end{itemize}

\begin{itemize}
  \item Greater reluctance does not mean abandonment. As noted earlier, the liberal Justices’ 31 percent level of reliance on legislative history in these 54 pro-employee unanimous majorities is substantially higher than their conservative colleagues, who invoke legislative history in a mere 7 percent of their 28 pro-employee unanimous decisions. See note 66 supra and accompanying text. This difference may well reflect the divergence in interpretive philosophy discussed supra at III.A.5.
\end{itemize}
Justice Scalia’s presence in the majority may be subtly discouraging the use of legislative history, even when the prevailing party’s legal arguments urge such reliance.191

Finally, the results in Table 7—presenting Justice Scalia’s overall judicial behavior on voting with the majority and joining majority opinions—indicate that liberal justices have special grounds for concern if they invoke legislative history. When liberal justices rely on legislative history, Scalia is significantly less likely to join their majority opinions even when he votes on their side.193 Moreover, Justice Scalia is also significantly less likely to vote for the majority result when liberal Justices rely on legislative history than when they do not.194 Our analyses of the Scalia Effect have focused primarily on whether he is willing to join certain majority opinions, but this finding suggests that the presence of legislative history in a majority written by liberal Justices also is linked to whether Justice Scalia will support the Court’s result. In addition, when liberal Justices rely on legislative history in their majorities, Justice Scalia is significantly

191 The prevailing party and/or the Solicitor General as supporting amicus relied on legislative history in 20 of the 30 unanimous pro-employee decisions that did not invoke this resource. The 20 decisions were authored by seven different liberal Justices.
192 The N of 266 includes Justice Scalia’s 26 majority opinions as part of his voting conduct, but these decisions are omitted from analysis of his joining behavior. The total N excludes four of the 270 cases analyzed in Table 6 supra: three cases in which Justice Powell (an older conservative) authored the Court’s majority, and one case in which Justice Scalia recused himself.
193 Scalia has voted for the result secured in these decisions 68% of the time, but has joined the majority opinions authored by liberal Justices only 45% of the time; the difference is highly significant (t=.017).
194 Scalia voted with majorities authored by liberal Justices 68% of the time when those Justices relied on legislative history, but 82% of the time when they did not invoke that resource; once again, the difference is significant (t=.035).
less likely to vote for the majority’s result or to join the majority’s opinion than is true when his fellow conservative Justices rely on legislative history in their majorities.\textsuperscript{195}

The findings reported in Table 7 reinforce our conclusions with respect to the subsets of pro-employer and pro-employee majorities authored by liberal Justices discussed above. At the same time, it is noteworthy that Justice Scalia’s resistance to supporting results or joining opinions justified in part by legislative history analysis does not extend to majorities authored by his conservative colleagues.\textsuperscript{196} Indeed, when it comes to majorities authored by these conservatives, Justice Scalia is every bit as likely to vote for a result, or join a majority, that relies on legislative history as one that does not.\textsuperscript{197} In contrast to his intense monitoring of liberal Justices’ use of legislative history, Justice Scalia seems inclined to give his conservative colleagues a free ride when they invoke this interpretive resource. We examine one aspect of Scalia’s distinctive behavior toward conservative-authored majorities in the subsection that follows.

3. Conservative Justices’ Use of Legislative History—A Free Ride?

Although our focus is on how liberal Justices’ reliance on legislative history has been affected by Justice Scalia, this brief excursion into usage by other conservative Justices allows for some instructive comparison. In following up on the results from Table 7, we reviewed the eighteen pro-employer majorities authored by Justice Scalia’s conservative colleagues since

\textsuperscript{195} Scaliv voted for the majority result in 68% of the liberals’ 60 majorities that used legislative history as opposed to 92% of the conservatives’ 25 majorities that relied on this resource, a highly significant difference ($t=0.009$). Similarly, he joined majority opinions relying on legislative history 45% of the time when liberals were authors, but 83% of the time when conservatives wrote the majorities ($t=0.003$).

\textsuperscript{196} The conservative colleagues who authored majorities invoking legislative history in Table 7 are Justices O’Connor, Rehnquist, and Kennedy; Justice Thomas has not written a single majority relying on legislative history in our dataset.

\textsuperscript{197} Thus, Scalia voted for results established in a conservative colleague’s majority decision 92% of the time when the decision relied on legislative history and 93% of the time when it did not. Similarly, Scalia joined a conservative colleague’s majority opinion 83% of the time when the author relied on legislative history and 82% of the time when legislative history was not invoked.
1986 that relied on legislative history. These decisions—authored by Justices Rehnquist, O’Connor, and Kennedy\textsuperscript{198}—could give rise to some tension for Scalia: they reach results he is likely to endorse but use a form of reasoning he is known to oppose.

We found that Justice Scalia joins seventeen of these eighteen pro-employer majorities; only once in eighteen cases does he refuse to endorse his conservative colleagues’ reliance on legislative history.\textsuperscript{199} That record contrasts markedly with Justice Scalia’s position when liberal Justices rely on legislative history to help justify pro-employer outcomes. There are nineteen such decisions written by liberals, but Scalia joins only ten of the majority opinions. Moreover, on the five occasions when Scalia concurs separately without joining the Court opinion, he either criticizes the liberal Justice’s use of legislative history\textsuperscript{200} or else avoids invoking that history altogether.\textsuperscript{201}

One could infer from this disparity that Justice Scalia is simply less suspicious when conservatives use legislative history than when liberals do, but the reality may be more complex. Of the eighteen pro-employer majorities authored by conservatives, six are unanimous while twelve include dissenting opinions. Importantly, eight of the twelve dissents rely on legislative history, so that both majority and dissenting opinions are invoking legislative record evidence. Justice Scalia joins the majority in seven of those eight decisions, suggesting that he gives a free ride to Justices Rehnquist, O’Connor, and Kennedy when their use of legislative history either

\textsuperscript{198} Justice O’Connor authored 9, Justice Kennedy 6, and Justice Rehnquist 4. Justice Thomas has authored no majorities, pro-employer or pro-employee, that rely on legislative history in our dataset.

\textsuperscript{199} That one instance is Jett v. Dallas School District, 491 U.S. 701, 738 (1989), where he concurs in the judgment and criticizes Justice O’Connor’s use of legislative history. See note 156 supra and accompanying text.

counteracts or anticipates legislative history arguments from pro-employee dissenters. One corollary of this apparent free ride is that majorities authored by these three justices that invoke legislative history are shaded in a conservative direction. The pro-employer tint may in turn help explain why conservative Justices’ use of legislative history after 1986 appears more ideologically aligned than was true for older conservatives.

4. **Normative Implications of the Scalia Effect**

Returning our attention to the liberal Justices, the evidence that Justices White, Stevens, and Breyer have exercised legislative history restraint in order to keep Justice Scalia on board might be understood as an aspect of judicial collegiality. Liberals have hardly abandoned reliance on legislative history, but their targeted forbearance may result in fewer fractured rationales for majority decisions, which in turn provides clearer rule-of-law guidance to lower courts and practicing attorneys. One might infer as well that such collegial adjustments occur primarily if not exclusively when legislative history performs a supplemental rather than essential role in the majority’s reasoning. Judges and scholars have written persuasively about the ameliorating effects of collegiality on an appellate court, and this may be an apt illustration.

It is difficult to know, however, whether accommodation in this instance comes at the cost of offering a less persuasive legal justification for particular decisions. The Court invokes a

---

203 There may well be other reasons for Justice Scalia’s more lenient approach to his conservative colleagues. He may trust them more than he trusts the liberals at a doctrinal or ideological level, and therefore be willing to cut them slack in methodological terms. Such an approach would reflect collegial and/or strategic thinking on Scalia’s part.

range of interpretive assets in virtually every majority opinion. Its inclusion of contextual as well as textual analysis, and of historical as well as linguistic evidence, contributes to the perception of judicial decisionmaking as rational, principled, and reasonably transparent. The Court’s diversity of interpretive resources also effectively invites attorneys to advance complex legal arguments, pushing the Justices toward opinions that are at once objective and nuanced.

In this setting, diminished legislative history usage by the Supreme Court may have broader implications. If the community of practicing lawyers and lower federal court judges perceives that the Justices value legislative history as an interpretive resource substantially less than they did in the past, this could encourage lawyers and judges to alter their own approaches to legal advocacy and judicial reasoning. Particularly when the diminished usage is by liberal Justices who have previously expressed their commitment to the legitimacy and value of this traditional resource, the Court may be sending a chilling signal to the legal community.

This possibility—that accommodation of a colleague’s intense methodological preferences is depreciating the value attached to an interpretive asset—may also affect future developments on the Court with respect to judicial reasoning. Justice Scalia in recent years has been adamant in opposing reliance on foreign law to help justify or explain the Court’s constitutional decisions. As was the case with legislative history, Scalia’s objections to the use of foreign law as an interpretive resource invoke considerations of legitimacy, reliability, and politicization. Given some colleagues’ apparent response to Scalia’s bright-line stance

205 See Maggs, supra note 168, at 73 (predicting that pressure from Justice Scalia may lead to diminished citation to legislative history by lawyers).

207 For Justice Scalia’s objections based on legitimacy, see Roper, 543 U.S. at 628, Lawrence, 539 U.S. at 598, Atkins, 536 U.S. at 347-48, and Thompson v. Oklahoma 487 U.S. 815, 868-69 n.4 (1988). For Scalia’s objections based on reliability and politicization, see Roper, 543 U.S. at 623-24 (reliability); 624-27 (politicization). Indeed,
regarding legislative history, one may at least wonder whether the Court’s willingness to invoke foreign law sources is destined to follow a similar path.

**CONCLUSION**

We have attempted to illuminate the nature of the Justices’ reliance on legislative history for an ideologically charged yet intellectually coherent subset of the Court’s docket. It is important to reiterate that workplace law decisions represent a mere one-sixth of the Court’s output. They may also be a somewhat atypical one-sixth, in that labor and civil rights statutes are generally long and complex, with lots of legislative history and also a fair amount of evidence that legislative bargains have been important features.\(^ {208} \) Other statutory decisions, such as the Court’s antitrust law or criminal law cases, may turn out not to rely as often or as robustly on legislative history. Antitrust statutes tend to be less detailed and more “common-law like” than laws regulating employer-employee relations,\(^ {209} \) while federal criminal statutes often involve less deal-making and more unanimity than is typical in the workplace law area.\(^ {210} \) This variation counsels against insisting on a single theoretical framework for legislative history analysis. Because federal regulatory approaches in other substantive areas of law may warrant different interpretive assumptions, there is reason to question the “one size fits all” approach that has characterized recent debates about the risks and rewards associated with legislative history reliance.

---

Justice Scalia’s lengthy discussion in *Roper* suggest he is broadening his attacks on foreign law to encompass not simply theoretical concerns about legitimacy but also practical arguments based on reliability and political manipulation. This more comprehensive assault parallels the development of Scalia’s critical approach to legislative history. See Maggs, *supra* note 168, at 72.

\(^ {208} \) See generally Beth M. Henschen, *Judicial Use of Legislative History and Intent in Statutory Interpretation*, 10 LEGIS. STUD. Q. 353, 366 (1985); Shapiro, *supra* note 76, at 110.

Moreover, our analysis has sought to explore only how legislative history is used to justify and explain majority decisions, not whether it actually accounts for the Justices’ substantive positions. We have referred more than once to subconscious elements of judicial reasoning, but we have not attempted to decipher the complex mosaic of motives when the Justices decide to invoke legislative history or any other resource in a particular majority opinion.\textsuperscript{211} Assessing and prioritizing the range of personal values, doctrinal and policy considerations, and principled reasons that contribute to the opinions of individual Justices would require a more pointedly biographical approach.

Notwithstanding these caveats, our account of how the Court invokes this single interpretive resource as part of its reasoning has yielded valuable insights in both descriptive and normative terms. Such insights can in turn help furnish guidelines for lower courts, attorneys, and the legal academy regarding how justifications for doctrinal and policy results are best rendered in future cases. These insights also help in legitimating the judicial form of decisionmaking, which is important in enhancing the Court’s acceptability to a broader public.\textsuperscript{212}

Principally, we concluded that over a thirty-seven year period, liberal Justices have relied on the legislative history of liberal worker-protection statutes in a surprisingly non-ideological fashion. We explained these results by identifying three doctrinally-based justifications that arise with some regularity in decisions authored by the eight liberal Justices. Each justification relates to the important role played by legislative history in defining or elaborating on congressional bargains that were negotiated in the process of enacting the workplace law statutes

\textsuperscript{212} See Baum, \textit{supra} note 139, at 97-106, 115-17 (discussing importance of legal reasoning in establishing judicial reputation among practicing lawyers, legal academics, and judges from other courts); Epstein & Knight, \textit{supra} note 21, at 157-77 (discussing impact of legitimacy norms in governing Court’s relationship with the general public.)
and provisions before the Court. At the same time, we have shown how legislative history is a resource that in certain circumstances may itself be bartered by the Justices, even if implicitly, in order to assuage a colleague.

That legislative history may be used in both principled and strategic ways does not distinguish it from other interpretive resources—our prior findings on the Court’s use of the canons of construction revealed a mixed and somewhat cautionary bottom line.213 What is noteworthy, however, is that legislative history reliance appears to be far less politicized in practice than its critics have maintained, at least when invoked by liberal Justices in this ideologically focused area of law. Whether the relatively principled uses reported here can support an argument that legislative history is preferable to other interpretive assets currently enjoying a more “neutral” reputation is a question best left for another day.
