[What is Metadata]

Standard definitions:

- “Data About Data”
- “Information About Information”

But what, really, does that MEAN?!

[CDs store audio information]

Information about information

Tchaikovsky composed this piece

This song is 1'30" long

This is my favorite song

That album has 17 tracks

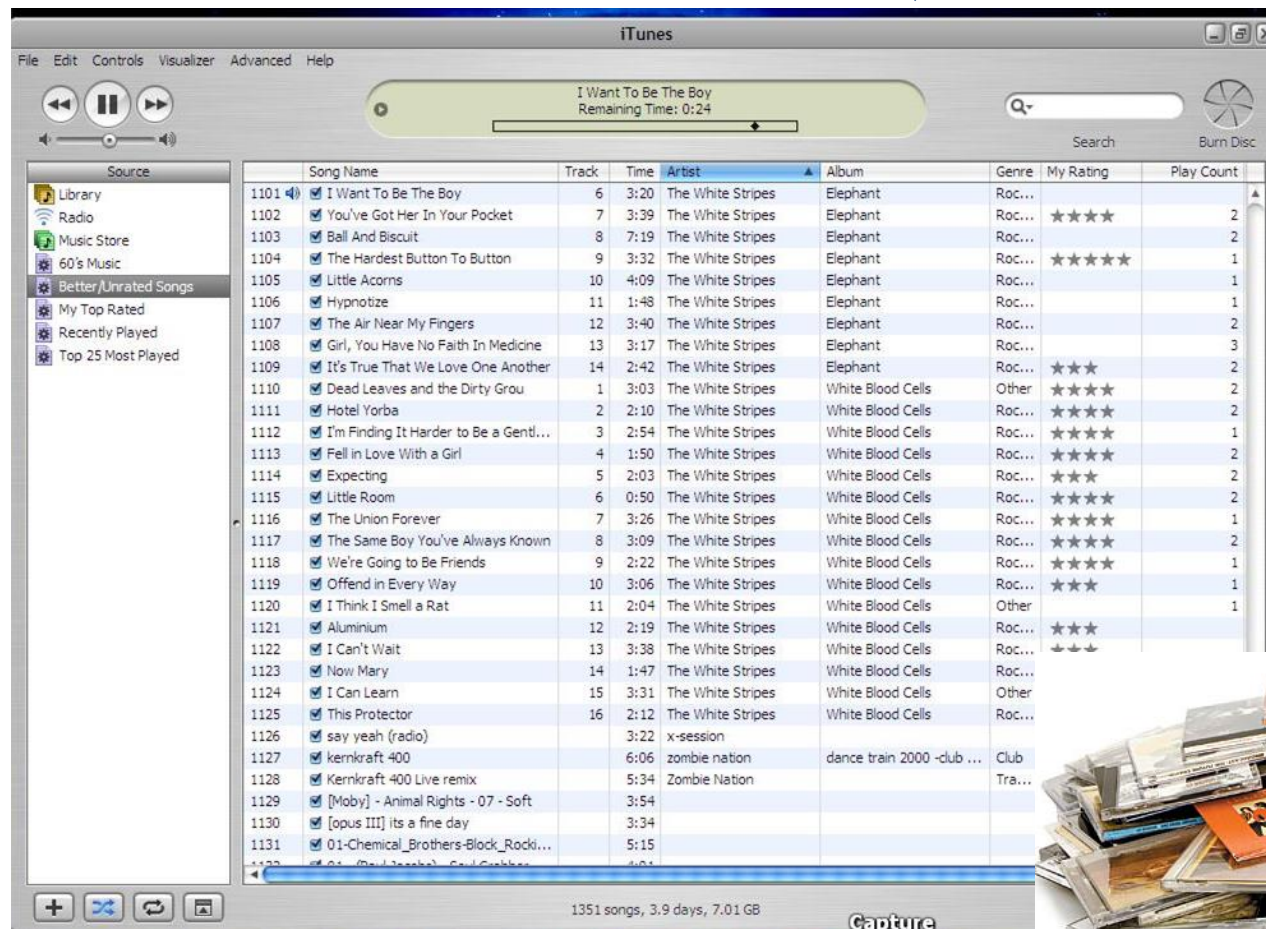

I own every Big Mama Thornton' recording

This CD is Rock 'n Roll
That CD is jazz

Organize this information in a structured way and it becomes
“metadata”

iTunes stores Metadata...

...about audio resources

[What is Metadata?]

“Metadata is structured information that describes, explains, locates, or otherwise makes it easier to retrieve, use, or manage an information resource.”

[Understanding Metadata](#), NISO Press 2004

[Benefits of Metadata]

- Allows resources to be found, identified, described, annotated, collocated, shared and disambiguated
- “Describing a resource with metadata allows it to be understood by both humans and machines in ways that promote interoperability.”
- Offers “ability to search resources seamlessly across a network”

Archives are chock full of resources in need of metadata

Information*

*Audio
Information*

Semantic information on the web can be expressed in three different ways:

1. Inferred
2. Free-form tagging
3. Structured data

These go in order from the **consumer** of data doing most of the work, to the **producer** of data doing most of the work.

Source: "A brief introduction to the Semantic Web"

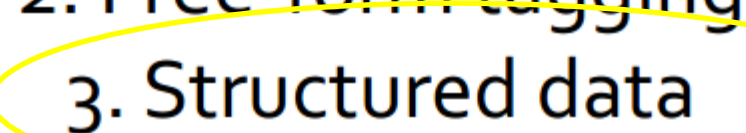

Yaron Koren

How to Search

The **Free Search** allows you to search for a combination of words, a name, or a number or letter sequence in the transcriptions of documents.

In the **Guided Search**, use the drop-down menus to browse and select a **Personal Name**, **Place Name**, **Key Term**, **Type of Document**, **Notary**, or **Year**. You may refine your search by combining any of these fields. The search parameters you select from the drop-down menus will connect you to all related documents. You will find summaries, transcriptions, and digitized images of the original documents. Search results for artists also include bibliography and related images from the National Gallery of Art.

The **Personal Name** list includes participants in the Accademia di San Luca, witnesses of transactions, and others. Preferred spellings of names appear in boldface type, followed by

After the unsolved argument
 Coming in a group of
 The little children and their
 ways and chatter, flow in,
 Like rippling water o'er my
 nerves and
 heated flesh.
 Walt Whitman

[Accademia di San Luca]

The transcriptions are encoded in Extensible Markup Language (XML) following the guidelines of the Text-Encoding Initiative (TEI) for digital encoding of literary and linguistic texts (<http://www.tei-c.org>).

The transcriptions may be searched by personal name (under all known variant spellings), place name, key term, document type, notary name, and year. The documents included are not only newly available to students and scholars of early modern Italy, but are also accessible in a way that both promotes their use and allows for the identification of additional archival material.

Implementation description: We used TEI tagsets specific to manuscript material, personal names, and place names. Our programmer implemented Perl script to batch process the documents from MSWord to XHTML to XML to HTML. We tagged the XML files in TEI according to the standards of the Text Encoding Initiative (TEI) P5 Guidelines (November 2007).

[Organizing Metadata]

STRUCTURE

- Which fields
- What they're called
- Whether they're required or not
- **Best to base the structure on a standardized schema**

FIELD CONTENTS

- Guidelines
("in our project we enter names as "Last, First MI")
- Controlled vocabularies
("in our project we use LOCSH for subject terms and TGN for Places")

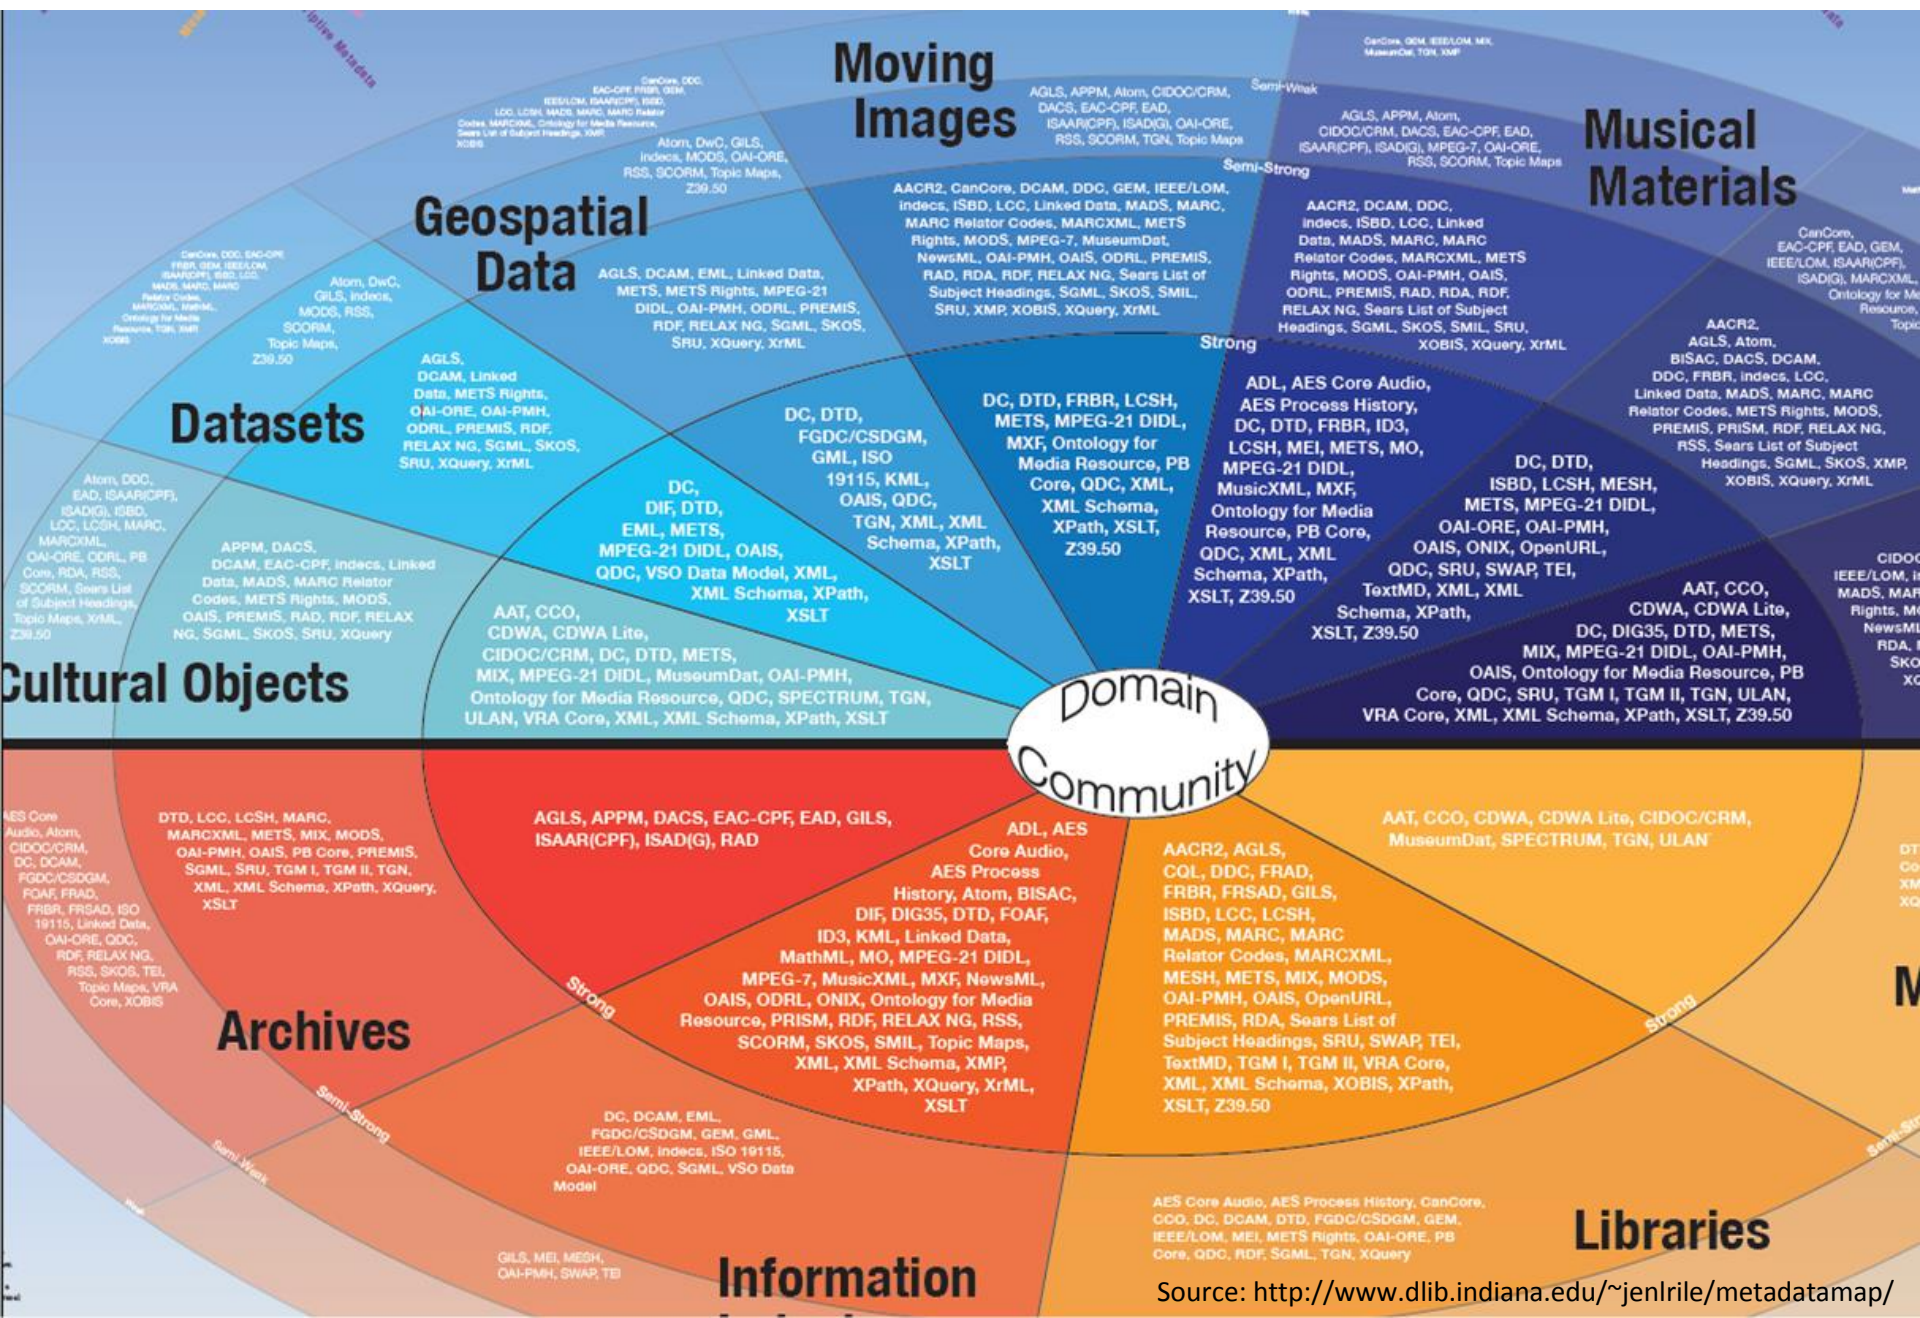

[Widely used schemas]

- MARC 91% *Used by librarians for library collections*
- EAD 84% *Used by archivists for finding aids*
- Dublin Core 78% *Used by cultural heritage practitioners for items*

[Choose a schema (set of fields)]

- ❑ A Metadata Schema is a “*set of metadata elements designed for a specific purpose, e.g. describing a particular type of info resource for a specific community of practice.*”
- ❑ Many possible schemas!
 - ❑ Always best to adopt a schema already in use by many others
 - ❑ But you can also make up your own... if you must...
- ❑ **Choose** which to employ based on:
 1. **your resource types**
 2. **your audience**
 3. **your community of practice**

Seeing Standards: A Visualization of the Metadata Universe

Simple Dublin Core (metadata schema)

15 metadata elements or fields:

1. Title
2. Creator
3. Subject
4. Description
5. Publisher
6. Contributor
7. Date
8. Type
9. Format
10. Identifier
11. Source
12. Language
13. Relation
14. Coverage
15. Rights

← Structural Elements

*But what controls the
content?*

[Digital Repositories]

- There are decisions to be made before creating any digital resources project
 - Which schema to use (fields)?
 - Which content standards to apply?
- Those decisions are never clear-cut
 - Think them through, commit to standards and move on
- **Standards** (schemas and content) allow for sharing, finding, interoperability

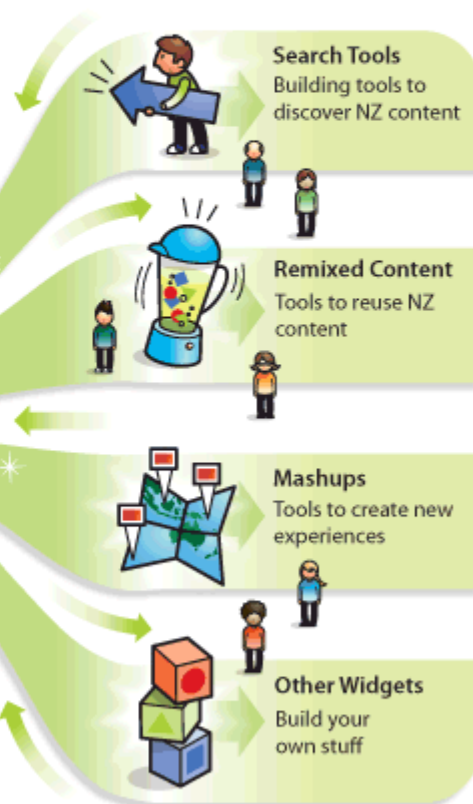

People and organisations contribute content

We store information about the content and provide access

Content is easier to find, share and use

Much of New Zealand's rich content is hidden or buried. We're working on new ways to create, describe, licence, store, surface & share NZ digital content.
