Farrington High School, Orange County, Florida

Digital Storytelling (DST) is the art form of capturing and sharing personal stories through a combination of digital media, such as video, audio, and images. DST offers a unique platform for educators to integrate art, literacy, and technology into the curriculum, allowing students to explore cultural heritage and history in a creative and engaging way.

Building Multicultural Curriculum from North American Heritage

We believe that through the power of digital storytelling, students can develop a deeper understanding of their own cultural identities and those of others. DST provides a medium for students to express their perspectives and connect with diverse stories and voices from across the North American heritage.

Youth is a crucial phase in the development of cultural identity and understanding. By engaging in DST, students can expand their knowledge, empathy, and critical thinking skills. As a result, they become more culturally aware and capable of navigating the complexities of global society.

The potential of DST is not limited to storytelling. It can be used as a tool for language acquisition, critical thinking, and creativity. Through DST, students can learn to express themselves in new ways, challenging traditional educational models and fostering innovative learning experiences.

In conclusion, DST is a powerful tool for educators to create a more inclusive and dynamic learning environment. By integrating DST into the curriculum, we empower students to explore, reflect, and contribute to a more culturally diverse and technologically advanced society.
