Migration, Development and the Promise of CEDAW for Rural Women

Lisa R Pruitt, University of California, Davis

MIGRATION, DEVELOPMENT, AND THE PROMISE OF CEDAW FOR RURAL WOMEN†

Lisa R. Pruitt*

This Article explores the potential of international development efforts and human rights law to enhance the livelihoods of rural women in the developing world. In particular, the Article takes up the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), which enumerates in Article 14 specific rights for rural women as a class. Pruitt’s focus here is on Article 14’s guarantees in relation to land ownership, education, development planning, access to credit, marketing facilities and technology, and other rights that are linked closely to women’s role as the architects of food security. While CEDAW has attracted enormous attention among legal scholars in the decades since its inception, Pruitt’s is the first scholarly article to focus on the Convention’s attention to rural women. To better understand the potential of CEDAW in relation to this particular population, Pruitt examines the drafting history of Article 14, as well as the most recent country reports of four Member States: China, Ghana, India, and South Africa.

Written for a symposium called “Territory without Boundaries,” Pruitt’s discussion of CEDAW’s Article 14 is situated in the context of massive rural-to-urban migration worldwide. Indeed, its publication comes just months after demographers report that, on a global scale, urban dwellers began to outnumber those living in rural areas. As globalization creates conditions that induce migration, causing the populations of cities to burgeon and their territories to sprawl, those same forces shape rural places, too. Although that which is rural is often thought of as quintessentially local, rural livelihoods around the world are buffeted by economic restructuring, migration, and climate change. Pruitt thus considers CEDAW in relation to migration’s consequences for the women who are left behind. Among these consequences are enormous challenges, but also opportunities for change and empowerment.

* Professor of Law, University of California, Davis, School of Law (King Hall); lrpruitt@ucdavis.edu. Thanks to the excellent team of researchers who assisted with this project: Su Yon Yi, Marta R. Vanegas, Emiko Kurotsu, Monica J. Baumann, Amy Paden, and Lauren Sible. Cindy L. Dole and Rachel Ray brought their editing expertise to the project, and Xong Vang managed the manuscript superbly. As always, the staff of the Mabie Law Library at UC Davis made themselves indispensable, and particular credit and thanks are due to Erin Murphy. Rebecca J. Cook, Claire Dickerson, and Anthony Schutz generously commented on an early draft. The MJIL staff and editors were outstanding. Any remaining errors are mine.
Pruitt’s analysis raises several broad, structural issues. The first is the impact of rural spatiality—including a relative absence of formal legal institutions and actors—on the ability of rural women to realize the promise of international instruments such as CEDAW. The second is the extent to which development entails or encourages urbanization and how CEDAW’s vision for empowering rural women might influence the trajectory of development efforts. The third is the wisdom of development strategies that fuel migration’s urban juggernaut, particularly in light of changing perceptions and priorities in the developed world regarding food production and sustainability.

Among other observations and conclusions, Pruitt lauds the priorities and framework of CEDAW’s Article 14 in terms of the ways in which they seek to foster women’s agency and material well-being. These include CEDAW’s aspiration to secure women’s roles in development planning and implementation and to empower them as producers of food. Pruitt also discusses the potential for CEDAW’s Article 14 to accommodate legal pluralism, which can be particularly relevant in rural places, where custom and local sources of authority tend to be more entrenched and influential than in urban locales. Finally, Pruitt suggests that the population churn associated with migration represents an opening for the renegotiation of gender roles and other cultural practices in rural places. This is because migration enhances the prospect of raising the consciousness of rural communities regarding national and international legal norms, while also facilitating enforcement of rural women’s rights by fostering their access to formal legal actors and institutions at higher scales, in urban places. Throughout her analysis, Pruitt considers parallels between developing and developed nations with regard to rural-urban difference, population trends, the industrialization of agriculture, and the social and economic consequences of these phenomena.
October 15, 2008 marked the first International Day of Rural Women.1 The United Nations proclaimed:

The International Day of Rural Women directs attention to both the contribution that women make in rural areas, and the many challenges that they face. Women play a critical role in the rural economies of both developed and developing countries. In most parts of the developing world they participate in crop production and livestock care, provide food, water and fuel for their families, and engage in off farm activities to diversify the family income. In addition, they carry out vital functions in caring for children, older persons and the sick. Women make an important contribution to food production.2

---

The United Nations selected October 15 because it is the eve of World Food Day, thus linking this recognition of rural women to their critical role in food production and food security.3

* * *

Perhaps it is contrarian to talk about rural people and places4 when invited to participate in a panel titled “Urban Territory in a Global World,” which is part of a symposium about “Territory Without Boundaries.” But surely a panel with a title using the word “urban” invites—at least implicitly—a discussion of the rural “other.”5 Indeed, a necessary complement to thinking about and studying global cities is thinking about and studying the global countryside. I use the term “global countryside” deliberately, to refute rurality’s long-standing association with the local, because our global economy is bringing country dwellers to the city and sometimes, more recently, sending them back.

3. International Day of Rural Women, supra note 2. Various nations have commemorated “World Rural Women’s Day” since international non-governmental organizations (NGOs) proposed it in 1995 at the Fourth World Conference on Women. Id. Food security is defined as “all people, at all times, hav[ing] physical, social, and economic access to sufficient, safe, and nutritious food to meet their dietary needs and food preferences for a healthy and active life.” World Bank et al., Gender in Agriculture Sourcebook 11 (2009) [hereinafter Sourcebook] (quoting Food & Agric. Org., The State of Food Insecurity in the World 2001 49 (2001)).

4. The U.N. Population Division defines the percentage of rural populations as the “[p]roportion of the midyear de facto population living in areas not classified as urban according to the criteria used by each country or area.” U.N. Dept’ of Econ. & Soc. Aff., Population Div., Rural Population, Development and the Environment 2007, at n.7, U.N. Doc. ST/ESA/SER.A/275, U.N. Sales No. E.08.XIII.10 (2007) [hereinafter Rural Population 2007]. The United Nations calculates rural and urban populations using national statistical sources based on the “urban” criteria used by each country or area. Id. The U.S. Census Bureau similarly defines “rural” as that which is not urban. U.S. Census Bureau, Census 2000 Urban and Rural Classification, http://www.census.gov/geo/www/ua/ua_2k.html (last visited June 21, 2009) (defining “urban” as including “all territory, population, and housing units located within an urbanized area (UA) or an urban cluster (UC)” and delineating the UA and UC boundaries to encompass densely settled territory, consisting of: “(1) core census block groups or blocks that have a population density of at least 1,000 people per square mile and (2) surrounding census blocks that have an overall density of at least 500 people per square mile”); see also Martin Ravallion et al., New Evidence on the Urbanization of Global Poverty 3–4 (World Bank, Policy Research Working Paper No. 4199, 2007) available at http://siteresources.worldbank.org/INTWDR2008/Resources/2795087-1191427986785/RavallionMEtal_UrbanizationOfGlobalPoverty.pdf (last visited June 21, 2009) (commenting on challenges and inconsistencies with the various definitions of urban and rural).

5. Indeed, I commend the editors and planners of this Symposium for using the term “urban” because so much in law and legal scholarships assumes the urban, without acknowledging that orientation. See Katherine Porter, Going Broke the Hard Way: The Economics of Rural Failure, 2005 Wis. L. Rev. 969, 970 (2005) (arguing that an implicit assumption of legal scholarship is that laws are assessed by their impact in urban places); Lisa R. Pruitt, Toward a Feminist Theory of the Rural, 2007 Utah L. Rev. 421 (2007).
To understand contemporary world migration patterns is to consider both rural and urban. Demographers tell us that we have probably just (in December, 2008) passed the day on which the world became more urban than rural. Migration accounts for most of that shifting balance. An understanding of rural-to-urban migration dynamics illuminates the way in which migration alters the circumstances of those left behind. It also invites consideration of the role law might more constructively play for those who are essentially the rural remnant—many of them women—in the developing world.

With the goal of assessing the potential of human rights and development to improve the livelihoods of rural women in the developing world, this paper proceeds in five parts. Part I provides an overview of the rural-to-urban migration phenomenon, a trend I call the urban juggernaut. This Part includes a discussion of forces compelling the migration, and it also considers consequences for those who are left behind when their family members and neighbors migrate to cities. Part II explores women’s roles in food production in the developing world, and it considers the extent to which international development efforts encourage or entail urbanization. Part III attends to the potential of human rights for this population, analyzing the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), which, in Article 14, enumerates particular rights for rural women. This Part further considers how four countries—China, Ghana, India, and the Republic of South Africa—have responded to their Article 14 commitments. Part IV concludes with thoughts on how law and legal institutions—including those related to development efforts—might best serve rural women. It begins also to consider how the role of law might differ in rural contexts. Part V, as postscript, contemplates the consequences of letting migration’s urban juggernaut run its course. This Part

6. Martha Nussbaum notes the lack of attention to the rural-urban divide and the power disparities manifest in that binary. See Martha Nussbaum, Frontiers of Justice 225 (2006).

8. I use the term “developing world” in the way the term “the global South” is often used. See infra note 13 (detailing World Bank and U.N. classifications).
queries whether the current trajectory of greater world urbanization will ultimately prove unsustainable by, for example, undermining global food security and environmental well-being.

I. Rural-to-Urban Migration in the Developing World

Worldwide, almost 800 million people have moved from rural areas to urban ones in the last half century. The vast majority of migrants relocate internally to urban centers, while fewer relocate internationally. Still, the total number of international migrants reached almost 191 million in 2005. Over the last several decades, these significant population

10. Id. In China, for example, over 32% of the 34.1 million migrants during the period between 1985 and 1990 were internal migrants. See Canfei He & Patricia Gober, Gendering Interprovincial Migration in China, 37 Int'l Migration Rev. 1220, 1226 (2003). More recent estimates suggest that about 126 million rural Chinese workers, 70% of whom are men, now work in cities. All-China’s Women’s Federation, Rural Women Left Behind at Home Need Attention, Women of China, Oct. 8, 2008, www.womenofchina.cn/issues/marriage_family/206759.jsp (last visited June 21, 2009). In Vietnam, 4.3 million were internal migrants, compared to the 300,000 who migrated abroad. Ronald Skeldon, Migration and Poverty: Some Issues in the Context of Asia in Int’l Org. for Migration, World Migration 2005: Costs and Benefits of International Migration 253, 261 n.29 (2005) [hereinafter World Migration 2005]. Richard Blissborrow comments on the dearth of information about internal migration in developing countries, as well as the consequences of this knowledge gap for development and other efforts. See Richard E. Blissborrow, The State of the Art and Overview of the Chapters, in U.N. Pop. Fund, Migration, Urbanization, and Development: New Directions and Issues, 3, 21 (Richard E. Blissborrow ed., 1998).
shifts have occurred primarily in less developed regions, where more than 90% of the world’s rural residents live. In 2007, 56.2% of those living in less developed regions lived in rural areas. That figure is expected to fall to 44% by 2025 as urban populations continue to rise.

Rural-to-urban migration is both a cause and a consequence of urbanization. Many factors influence migration from the country to the

13. U.N. Dept. Econ. & Soc. Aff., Population Div., Urban and Rural Areas 2007, U.N. Doc. ST/ESA/SER.A/276, U.N. Sales No.E.08.XIII.13 (2008) [hereinafter Urban and Rural Areas 2007]. The World Bank classifies countries as low-income, middle-income and high-income economies based on their gross national income (GNI) per capita. It notes that low- and middle-income economies are sometimes referred to as developing countries. However, the World Bank acknowledges that “[t]he term is used for convenience; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development.” World Bank, 2008 World Development Indicators xxi (2008). The U.N. Population Division uses two other categories: “less developed regions” and “least developed countries.” Urban and Rural Areas 2007, supra. The first category is broader, while “least developed countries” is a subset encompassing fifty countries. Id. Less developed regions include Africa, Asia (excluding Japan), Latin America, the Caribbean, Melanesia, Micronesia, and Polynesia. Id. The United Nations characterizes the least developed countries as the “poorest and weakest segment of the international community.” Third U.N. Conference on the Least Developed Countries, Brussels, Bel., May 14–20, 2001, *Programme of Action for the Least Developed Countries* ¶ 1, U.N. Doc. A/CONF. 191/11 (June 8, 2001) (“These countries are characterized by their exposure to a series of vulnerabilities and constraints such as limited human, institutional and productive capacity . . . limited access to education, health, and other social services . . . poor infrastructure; and lack of access to information and communication technologies.”).

15. Id. (noting that urban inhabitants grew from 18% of the total population in 1950, to 27% in 1975, and to 44% in 2007).

16. See Jeffrey Sachs, *The End of Poverty: Economic Possibilities of Our Time* 38 (2005) (“[M]odern economic growth involves urbanization, changing gender roles, increased social mobility, changing family structures, and increasing specialization.”); see also Kwasi Nsiah-Gyabaah, *Urbanization Processes—Environmental and Health Effects in Africa, Contribution to Population-Environment Research Network Cyberseminar on Urban Spatial Expansion* 1–2 (2004), available at www.populationenvironmentresearch.org/seminars/12004.jsp (noting that urbanization results from “changes in land use and transformation from rural to metropolitan pattern of organization and governance” and that “urbanization processes are largely driven by market forces and government policies” that often favor urban residents over rural ones, thereby pulling the latter into the former); Elena Irwin, *Market Forces and Urban Expansion, Contribution to Population-Environment Research Network Cyberseminar on Urban Spatial Expansion* 1 (2004) (seeing economic growth and urbanization as inextricably linked and noting that the former “often implies the conversion of rural land to urban uses (residential, commercial and industrial) as regional economies transition from an agrarian-based economy to an urban economy based on industry and services”).
These include globalization, rural poverty, and unemployment in rural areas. Jeffrey Sachs asserts that rural-to-urban migration occurs “out of desperation and hunger in the countryside.” Low-skilled workers move in search of manual labor positions that are not available in rural areas. Educated workers may migrate because their human capital is better rewarded in cities. Absent investment in rural livelihoods, this trend of outmigration from rural areas will likely continue to gain force.

In spite of this migration of millions of rural residents to urban areas, the rural population of less developed countries has doubled since 1950. Meanwhile, rural populations in developed countries have steadily declined. High population growth in rural areas can increase pressure on land and other resources, creating a labor surplus that drives migration.
Globalization of markets and labor profoundly influences rural livelihoods. While globalization has generally been a positive force in terms of increasing employment, it has undermined traditional livelihoods in agriculture and increased rural-to-urban migration. Experts express concern that the benefits of globalization are not reaching, among others, the rural poor. When the rural poor do see benefits, they are often in the form of remittances sent home by migrant relatives, a practice that typically does not lay the groundwork for sustainable development.

The commercialization of agriculture is among the effects of globalization that has had a significant impact on rural people. More farmers—both large and small—produce for the market, often for export. Global price fluctuations thus affect rural economies. As commercial agriculture displaces subsistence farming, rural unemployment rises, leading rural wage labor to migrate to cities. Developed countries’ foreign investment in agriculture, similar to investment in export sectors, creates opportunities for all.

30 J. Peasant Stud. 71, 73, 86, 88 (2003). The women left behind increasingly work on their own family farms and as hired labor on other farms. Id. at 73, 91.

29. See Thomas A. Lyson, Global Capital and the Transformation of Rural Communities 292 in Handbook of Rural Studies (Paul Cloke et al. eds., 2006). This is true not only with respect to the developing world, but also the developed world. See, e.g., Communities of Work: Rural Restructuring in Global and Local Contexts (William W. Falk et al. eds., 2003); Lisa R. Pruitt, Gender, Geography and Rural Justice, 23 Berkeley J. Gender, L. & Justice 338 (2008).

31. Id. (citing the example of India); see also Sachs, supra note 21, at 219–20.

32. The phenomena of emigration from rural areas and subsequent remittances illustrate the close link between the survival of rural residents and the well-being of the urban and the global economies. The ripple effects of the current economic downturn, for example, reach beyond urban spaces to affect rural areas. See infra note 66 and accompanying text.

33. Rural Women, supra note 11, at 7; see also Saskia Sassen, The Mobility of Labor and Capital: A Study in International Investment and Labor Flow 96 (Cambridge Univ. Press 1988) (noting that less developed countries experienced rapid economic growth, partly as a consequence of developed countries’ investment, but with limited internal markets, these countries must export their products).

34. Rural Poverty Report, supra note 19, at vi (noting that as countries adopt policies based on market forces, including abolition of commodity boards and domestic agricultural trade rules, “poor farmers are more fully exposed to the demands of markets” and vulnerable to their volatility); see also Carmen G Gonzalez, Trade Liberalization, Food Security, and the Environment: The Neoliberal Threat to Sustainable Rural Development, 14 Transnat’l L. & Contemp. Probs. 419, pt. III.B (2004) (explaining “neoliberal trade reform” and its negative consequences for developing nations).

35. Sassen, supra note 33, at 96–97. But see Sachs, supra note 21, at 27 (asserting that rural-to-urban migration is not a result of increased agricultural productivity).
port manufacturing, ultimately uproots rural populations of developing countries. 36

Agriculture is a sector in which globalization has had a pronounced impact on rural women. 37 Women producers, among others, struggle to compete in the face of trade liberalization that allows the import of subsidized agricultural products. 38 At the same time, local biases against women producers and the micro-enterprise sector may make it difficult for them to enter into new economic opportunities generated by globalization. 39

The high levels of debt acquired by many less developed countries impact rural livelihoods in other ways, too. Such debt severely hinders these countries’ ability to serve their citizenry, including their typically large rural populations. Further, rising debt severely limits state spending on education, health care, and other services. Women and children, often the beneficiaries of such spending, thus frequently bear the brunt of debt’s consequences. 40 Finally, the limited resources available increasingly target urban areas, 41 further disadvantaging rural women and children.

36. Sassen, supra note 33, at 98. While direct foreign investment stimulated economic growth and increased the number of jobs in the less developed countries, unemployment rose as large segments of previously nonworking women joined the labor force. Id. at 19. The mass introduction of women into the labor force, concurrent with rapid industrialization, disrupted traditional work structures and indirectly induced male migration. Id.

37. See A Fair Globalization, supra note 30, at 47–48 (noting that “trade liberalization has often allowed the import of subsidized agricultural products and consumer goods that have wiped out the livelihoods of women producers;” that farming women frequently cannot compete with foreign firms for raw materials; and finally, that biases against women producers and/or the micro-enterprise sector make it difficult for them to enter into new economic activities generated by globalization).

38. Id. (noting that women may also be unable to compete with foreign firms for raw materials).

39. Id.

40. See Saskia Sassen, Two Stops in Today’s New Global Geographies: Shaping Novel Labor Supplies and Employment Regimes, 52 Am. Behavioral Scientist 457, 466 (2008) [hereinafter Sassen, New Global Geographies] (reporting 1992 debt levels for the developing South at $1.4 trillion, with debt servicing payments exceeding the principal, at $1.6 million). For example, Zambia paid $1.3 billion in debt but only $37 million on primary education; Uganda paid $9 per capita on debt and only $1 per capita for health care. A great deal of research documents the disproportionate impact that such debt has on programs for women and children. Other research shows that the debt policies have worsened the situation for the unemployed and the poor. See id. at 466–67; see also Lourdes Beneria & Shelley Feldman, Unequal Burden: Economic Crises, Persistent Poverty, and Women’s Work (1992) (highlighting the burden borne by women following the debt crisis and national restructuring); Joan Fitzpatrick & Katrina R. Kelly, Gendered Aspects of Migration: Law and the Female Migrant, 22 Hastings Int’l & Comp. L. Rev. 47, 98 n.254 (1998).

41. See infra notes 128–136, 397 and accompanying text.
B. The Impact of Desertification

International economic and market pressures can lead to short-term exploitation of land in order to produce crops for export. Such exploitation can reduce the land’s productive capacity, sometimes irreversibly. The world loses an estimated twelve million hectares annually to desertification, which can occur naturally or as a result of human exploitation. Land degradation also can reduce the quantity and quality of water available for personal and agricultural use.

Desertification leads to prolonged periods of drought, famine, food insecurity, and poverty. Those who have depended on the land for their livelihoods often must migrate in order to survive. As conditions worsen at home, migrants—usually men—will leave for longer periods, sometimes relocating permanently, thus resulting in a “feminization of agriculture.”

43. IFAD has funded some innovative projects utilizing local knowledge of the land to curtail desertification and restore fertility of the land. See generally Jeanette D. Gurung et al., Gender and Desertification: Expanding Roles for Women to Restore Drylands (2006).

44. IFAD, Fact Sheet on Desertification 2 (2008) [hereinafter IFAD on Desertification]. Climate change accelerates desertification, just as loss of vegetation from desertification aggravates climate change. Id.; see also UNCCD Fact Sheet, supra note 42, at 1–2.

46. UNCCD Fact Sheet, supra note 42, at 1.

47. Extreme weather events in 2005–07, including drought and floods, caused world production of cereal to decline because of low crop yields. FAO, The State of Food Insecurity in the World 2008: High Food Prices and Food Security—Threats and Opportunities 10 (2008) [hereinafter Food Insecurity Report]. In combination with other factors, this decline in production increased food prices. Id.

48. IFAD on Desertification, supra note 44, at 1; UNCCD Fact Sheet, supra note 42, at 2.

tation significantly contributes to internal displacement of people and can be a catalyst for conflict.

Not only does desertification drive male migration and thus result in rural female-headed households, it creates hardships for all rural households. Rural women are usually responsible for activities such as collecting water and firewood for the family. As resources decline, women devote more time to these tasks, leaving them less time to cultivate food for subsistence or as a source of income. Compounding the problem, women left behind must also assume tasks that were previously the responsibility of men.

C. Migration’s Consequences for Food Production

Some of the tasks women must assume when male migration leaves them behind relate to food production. Female-headed households struggle with food insecurity in part because they are limited in their ability to produce food because of gender-based constraints on accessing land and credit. But male migration can have both positive and negative consequences for agricultural productivity. On the one hand, migration may result in reduced production and therefore lower income. Productivity may also be diminished because of resulting labor shortages for traditionally male activities such as clearing land and plowing. Further, permanent migration can deprive rural areas of a critical labor force during peak seasons and drain rural areas of skilled and innovative community members.

On the other hand, migration can foster both short-term and long-term benefits. Seasonal internal migration allows rural households to increase income with off-season work without creating a labor short-

50. IFAD on Desertification, supra note 44, at 2 (noting that “[i]f the rate of desertification remains unchecked, an estimated 50 million people will be displaced in the next 10 years”).
51. Sourcebook, supra note 3, at 475–76.
52. Food Insecurity Report, supra note 47, at 27.
53. Rural Women, supra note 11, at 16.
54. Sourcebook, supra note 3, at 1, 319.
55. Id. at 426; Rural Women, supra note 11, at 10. The tasks generally designated to rural women often fill 16 hours a day. Their responsibilities include farm work, household chores, earning income to supplement family incomes, and care of children and elderly. Sourcebook, supra note 3, at 289; see also Jazairy et al., supra note 21, at 79; Lall et al., supra note 17, at 41.
56. Food Insecurity Report, supra note 47, at 27 (noting that female-headed households also struggle because they spend more, proportionally, on food); see also Rural Women, supra note 11, at 16.
57. Rural Women, supra note 11, at 18.
58. IFAD, Roundtable 1: Migration and Rural Employment, at 1, IFAD Doc. GC 30/INF.4 (Feb. 2, 2007).
In more densely populated areas, migration can alleviate the problem of un- and underemployment, leading to a rise in wages as the labor supply diminishes. Migration may also have a positive impact on local production when migrants return with newly acquired skills, knowledge, and experience, thus increasing rural human capital. Indeed, migrants may return with other types of knowledge, too—knowledge that has the potential to transform rural social norms, including women’s roles.

Finally, migration may also permit the accumulation of capital for investment in agricultural production. As discussed further in the next section, if recipients invest remittances wisely in the rural community, they can reap substantial long-term benefits. Among the possible benefits is empowerment of the rural women who receive and control the funds.

D. Remittances: Crutch or Opportunity?

Need at the household level drives migration, but migration may also reflect a government survival strategy. High levels of government debt coupled with high unemployment rates exert pressure on both governments and individuals to find financial survival strategies. One government strategy is to export labor and rely on migrants’ remittances. For many countries, emigrant remittances exceed the combined flow of all foreign direct investment and net official development assistance. Scarce income-generation opportunities in rural areas lead many...
families to rely on migration of one or more members and the remittances they send. An estimated 500 million people—eight percent of the world’s population—receive remittances. In Bangladesh, for example, remittances account for fifty-one percent of households’ total income. In the state of Guanajuato, Mexico, remittances are the main source of income for forty-five percent of households. In Burkina Faso, fifteen percent of households—most of them rural and headed by women—receive international or domestic remittances.

Development scholars disagree on whether remittances have a positive long-term impact on development and poverty reduction. Unlike government investment or aid, remittances flow directly to individuals and households, giving individuals control of how funds are spent. Most recipients spend remittances on immediate needs, such as food, health care, and clothing. Families also make investments in human capital, including education for their children. While relatively few women invest in income- and job-generating ventures, women are more likely than men to make such investments.

71. Cotula et al., supra note 64, at 12–13.
72. Id.
74. Id.
75. Newland, supra note 70; cf. sources cited supra note 64 (providing examples of long-term investment of remittance income).
76. See Sriskandarajah, supra note 61, at 20 (reporting that “[t]he majority of remittances are spent on . . . consumption goods . . . improving housing and buying durable goods, but generally only a small part is spent on investing in productive uses. One survey suggests that just 6% of remittances sent home by the African diaspora is reinvested”). Generally, women are more likely to invest in housing, health, and education, while men are more likely to spend on consumer items. Remittances sent by women have also been used to improve housing and to invest in agricultural inputs, such as cattle or fertilizers. Rural Women, supra note 11, at 22; New Perspectives, supra note 11, at 12–13.
Remittances have the potential to lift recipient families out of poverty, but they can also create inequality within villages. This happens when remittance-receiving families become “haves,” thereby making “have-nots” of those without remittance income. Remittances can hurt non-migrant households in other ways. For example, increased consumption among migrant households may cause local price inflation. Inflation renders all goods less affordable, while also reducing the funds available for productive investments in education, health care, and agricultural improvements.

78. See New Perspectives, supra note 11, at 10. In villages where many households have links with internal migrants, remittances have an equalizing impact on income distributions, but remittances from international migrants tend to increase inequality. See Lall et al., supra note 17, at 39; see also Richard H. Adams, Jr. et al., The Impact of Remittances on Poverty and Inequality in Ghana 20–21, 23 (World Bank Dev. Econ. Dept., Dev. Prospects Group, Working Paper No. 4732, 2008) (finding that, while remittances reduce poverty in Ghana, international remittances have a greater impact on reducing poverty and increasing inequality than internal remittances because the former are about four times greater than the latter; few poor households receive international remittances); Cotula et al., supra note 64, at 23 (noting, for example, that in Pakistan international remittances led to increased concentration of land ownership by upper-income groups). This phenomenon may be explained by the fact that mostly members of middle-income families migrate internationally because of the significant resources required to do so. Nancy Hart et al., FAO Sustainable Agricultural and Rural Development (SARD) Policy Brief No. 13, SARD . . . and Rural Migration 1 (2007) (citing FAO, 2006 Role of Agriculture Report, http://www.fao-ilorg/ and-more/migration/en/); Omelaniuk & Weiss, supra note 11, at 18 (noting that “[f]amilies often pool their economic resources to send one member into the world to improve their lot back home”). The poor, on the other hand, are likely to be local or regional migrants, or unable to migrate at all. Finally, remittances tend to induce more migration from rural areas as families not receiving remittances perceive themselves as deprived relative to other families in the area. Skeldon, supra note 10, at 255–56; see also Sara Curran & Abigail Saguy, Migration and Cultural Change: A Role for Gender and Social Networks?, 2 J. Int’l Women’s Stud. 54, 62–65 (2001) (discussing the notion of relative deprivation as a motivation for migration and arguing that gender roles influence perceptions of deprivation).

80. Sriskandarajah, supra note 61, at 20 (suggesting that only 6% of remittances in Africa are used for investment purposes); see also Cotula et al., supra note 64, at 48, 39 (documenting a phenomenon in which many migrants in Ghana and Senegal use remittances to purchase land for residential purposes rather than for agriculture); id. at 38, 47 (noting further that investment by Ghanaians and Senegalese migrants focuses on the new urban home rather than in the former rural one, and that migrants use funds to set up small business in cities to access potential markets there).
Finally, remittances do not necessarily result in development, economic growth, or job creation in local rural economies. Because remittances are used primarily to meet basic family needs, rather than for reinvestment, any increase in the number of jobs or in local output is typically slight. In some regions, migrants pool their remittance resources to fund infrastructure and social service programs, but this type of investment represents only a fraction of the development and infrastructure required to ensure sustainable growth in a rural area. In short, remittance income is rarely converted into “sustainable productive capacity.”

Moreover, a steady flow of remittances may create unhealthy reliance by nations, as well as by individual families. Economic downturns such as the current one diminish remittances, with devastating consequences for the receiving countries’ economies. As migrants

81. Sriskandarajah, supra note 61, at 20 (noting a negative correlation between the size of remittances and economic growth, and arguing that remittances create disincentives to work in recipient communities).
82. Id. (arguing that investment in productive uses can have a multiplier effect on economic growth and job creation and that consumption spending has a weaker multiplier effect).
83. Cotula et al., supra note 64, at 34 (describing similar public works contributions by a France-based Senegalese association); Peggy Levitt & Ninna Snyberg-Sorensen, The Transnational Turn in Migration Studies 5–6 (Global Comm’n on Int’l Migration, Global Migration Perspectives No. 6, 2004) (describing contributions by migrants associations in Mexico to public works projects in coordination with a governmental matching-funds program); Manuel Orozco, Migrant Hometown Associations (HTAs)—The Human Face of Globalization, in World Migration 2005, at 279, 279–83 (describing other development projects undertaken by regional associations).
84. Newland, supra note 70.
85. Penson, supra note 79, at 2; see also Newland, supra note 70 (noting that “bad infrastructure, corruption, lack of access to credit, distance from markets, lack of training in entrepreneurial skills, and disincentives to savings” all result in reliance on remittances); Omelaniuk & Weiss, supra note 11, at 19 (urging that remittances “be seen as an initial investment . . . rather than a way of life”); Sabrina Tavernise, Bad Times Stall Cash Flow from Tajik Migrants, N.Y. Times, Dec. 25, 2008, at A1 (quoting Dilip Ratha, World Bank, as stating that Tajikistan’s economy, 54% of which is based on remittances, “is not sustainable without migration”); Ratha et al., supra note 68, at 3 (listing the top ten countries that receive remittances as a substantial portion of their GDP).
lose jobs, they send home less money, and some even return to their rural places of origin.\textsuperscript{87}

E. Summary

The added challenges and hardships associated with male migration can leave rural women more economically vulnerable than ever. As men migrate and women become the heads of their families, women take on more responsibility, including in the agricultural sector. But migration also has the potential to increase rural women’s agency and decision-making power, in part because of the population churn associated with migration. This population turnover diminishes the isolation that typically marks rural communities and may thus bring with it a greater awareness of law and legal rights. It can also put remittance income in the hands of women, who are more likely to use it constructively.

The next two Parts discuss the roles that international institutions can play in rural women’s empowerment. Part II discusses the role of development in relation to rural populations and food security, with special emphasis on women’s roles in this age of migration. Part III discusses how CEDAW might contribute to this empowerment.

II. Rurality, Gender, Food, and Development

A. Rural Women and Agriculture Around the Globe

Not only are a growing number of rural households headed by women,\textsuperscript{88} the Food and Agriculture Organization (FAO) reports that women produce about half of the world’s food for direct consumption.\textsuperscript{89} Around the world, 428 million women work in the agricultural sector,\textsuperscript{90} which is

\textsuperscript{87} See Jason Beaubien, Mexican Remittances Fall as U.S. Jobs Are Slashed (National Public Radio broadcast Nov. 26, 2008); Keith Bradsher, China’s Unemployment Swells as Exports Falter, N.Y. Times, Feb. 6, 2009, at B3 (discussing efforts by the Guangdong Provincial Labor and Social Security Bureau to encourage migrants to return to rural areas and to ease their re-integration); Shai Oster, China Fears Restive Migrants As Jobs Disappear in the Cities, Wall St. J., Dec. 2, 2008, at A1; Edward Wong, Factories Shut, China Workers Are Suffering, N.Y. Times, Nov. 14, 2008 (detailing the decrease in remittances and return home of Chinese workers in the wake of massive factory shutdowns).

the primary source of women’s employment in many regions.\(^{91}\) According to the Gender in Agriculture Sourcebook, when both self-employment and wage labor are considered, women provide more labor in agriculture than men in Asia, Sub-Saharan Africa, the Middle East, North Africa, and some Caribbean and Central American countries.\(^ {92}\) The FAO reports that two-thirds of women in the labor force of less developed regions engage in agricultural activities.\(^ {93}\) Yet globally women own less than two percent of the land worldwide, and they receive less than ten percent of the available credit.\(^ {94}\)

\[\textbf{B. Food (In)Security}\]

Although the world currently produces enough food to feed twelve billion people\(^ {95}\) (exceeding the current world population of 6.7 billion\(^ {96}\)), hunger, food insecurity,\(^ {97}\) and malnutrition persist and are projected to increase through 2020 and beyond.\(^ {98}\) Three-quarters of the world’s 1.2 billion poor people (as measured by the standard of income of less than one dollar per day) live and work in rural areas,\(^ {99}\) and the global rural-urban poverty gap is not narrowing.\(^ {100}\) Hunger remains “endemic” in most of the developing world’s rural areas, where malnutrition levels consistently exceed those in cities.\(^ {101}\) The World Bank observes the irony of food insecurity’s “largely rural face.”\(^ {102}\)

\(101\) Axel Wolz, Global Donor Platform for Rural Dev., The Role of Agriculture and Rural Development in Achieving the Millennium Development
Policymakers acknowledge that women “are the architects of food security.”\textsuperscript{103} Women are generally responsible for food selection and preparation, as well as for the care and feeding of children.\textsuperscript{104} When a woman has an income, she is more likely to spend it on food and the needs of children.\textsuperscript{105} Yet, according to the FAO, the International Fund for Rural Development (IFAD), and the World Bank, food insecurity is a consequence of the rural poor being net food purchasers rather than sellers.\textsuperscript{106} In relation to food security, then, food production is more important as a means to generate income than it is for direct family consumption.\textsuperscript{107} Like others who produce to sell, rural women need access to income and markets.\textsuperscript{108}

C. Agricultural Development as Rural Development

Rural and agricultural development efforts are credited with a dramatic decline in poverty and hunger between 1975 and 1990.\textsuperscript{109} IFAD observes, however, that these advances—along with progress in agricultural production—have more recently stalled.\textsuperscript{110} Many rural areas currently see no benefit from such development.\textsuperscript{111} This situation is not surprising given that international funding for agricultural development has declined in recent years.\textsuperscript{112} Between 1987 and 1998, “the absolute value of aid fell by two-thirds.”\textsuperscript{113} The proportion of official development assistance for agriculture fell from twenty percent in the 1980s to twelve percent in the early 2000s.\textsuperscript{114} Likewise, the World Bank’s lending to the agriculture sector declined from thirty

percent of total lending in the 1980s to about eight percent ($1.5 billion) in 2002. The Bank has acknowledged that lending to rural spaces “is not congruent with the greater incidence of poverty in rural areas.”

Yet many international organizations encourage broad-based rural development that entails job creation as a way to alleviate poverty and reduce migration pressures. The World Bank in 2003 called for agricultural growth to be at the top of the development agenda in order to reach the millennium goals of cutting hunger and poverty. Further, agriculture tends to be more resilient than other sectors during severe economic crises.

Indeed, the agricultural sector might provide a safety net of sorts for developing countries because of its potential to absorb some of those who lose their jobs during economic downturns. The FAO observes that increases in agriculture and related sector employment can help to maintain and enhance population balance between rural and urban by decreasing migration pressures. It estimates that agricultural growth is as much as four times more effective at poverty reduction than is growth in other sectors. In particular, the FAO advocates rural development that enhances the capacity of small-farmholders, noting that income generated by 500 million such farms supports three billion rural people worldwide. Success on the part of these farms has great potential to reduce poverty by increasing food availability and lowering food prices. It also can result in higher incomes and may generate demand for locally produced goods and services.

Although developing the agriculture sector enhances food security and narrows the rural-urban development and poverty gaps, national pol-

115. World Bank, Reaching The Rural Poor: A Renewed Strategy for Rural Development 10–11 (Report No. 26763, 2003) [hereinafter Reaching the Rural Poor]. The World Bank’s lending to the rural sector comprised 25% of total lending ($5 billion annually), while only 11% was dedicated to projects coded for urban development. The Bank estimates, however, that the remaining funds, which cannot be attributed to either urban or rural spaces, “predominantly focused on city dwellers.” Id.

Policies tend to favor urban development and investment. Such policies disproportionately neglect the needs of the rural developing world. In the 1970s and 1980s, between nine percent and thirty-four percent of total government expenditures went to the rural sector, percentages that are well below respective rural population shares.

1. Urban Bias

Despite the capacity of development to improve the lives of rural residents, some development theorists object to the discourse of development, including the objectification of developing countries as “other” to be developed. Balakrishnan Rajagopal, for example, writes: “Development has always been a hegemonic idea in that it has always been clear about who needs to be developed, who will do the ‘developing’, how and in which direction.” Because of development’s postcolonial and Cold War roots, some development theorists view development efforts as forms of cultural imperialism.

Similar criticisms can be leveled at rural development efforts in particular. Rural development tends to focus narrowly on efficient production as a means to reduce poverty. These efforts sometimes ignore “structural factors such as the precarious availability of land, deficient soil quality, and the strong resistance of rural communities to produce for the market.” As agricultural development efforts encroach on small farmers, these farmers sometimes become objects of development, rather than subjects with a voice in the development process.

Arturo Escobar is among those who see a fundamental problem with rural development strategies’ focus on mass production as the only

132. Id. at 155; see also Ruth E. Gordon & John H. Sylvester, Deconstructing Development, 22 Wis. Int’l L.J. 1, 17 n.63 (2004) (illustrating the danger of blindly favoring supposedly good, modern techniques over local agriculture in developing countries).
means by which rural populations can accelerate into modernity. He criticizes the focus on quantity of production, which discounts the notion that rural livelihoods are simply a way of life. For some, that way of life reflects quality and choice.

An urban bias—indeed, an urban hubris—is thus reflected in much development theory, planning, and execution. The Encyclopedia of International Development even features an entry for “urban bias.” To the extent that agricultural and rural development focus primarily on increasing productivity, they drive rural-to-urban migration. This is because mechanization and reliance on technology diminish the need for agricultural labor. If such intensive production agriculture does not employ ecologically sustainable practices, it has adverse consequences for the environment. This puts the developing world on the same path that the developed world has already traveled—one of greater urbanization. This often unstated urban bent in development is akin to—even an aspect of—the Western hubris that has been so criticized by postcolonial scholars such as Escobar.

2. Gender Bias

In addition to an urban bias, rural development strategies often reflect gender biases. Escobar is among those who assert that women’s exclusion from agricultural development programs sometimes diminishes their status and that of their work. Along with other flaws, he notes that development planners have tended to embrace the U.S. model of agriculture. That model assumes men to be the productive workers, while relegating women to near invisibility. Women’s programs have been limited to “health, family planning, nutrition, child care, and home economics . . . . For women, the consequences of development include

increased workloads, loss of existing employment, changes in the reward structures for their work, and loss of control of land.”

Indeed, throughout the 1970s, women featured in international rural development policies only in relation to pregnancy, lactation, feeding children, procuring clean water, handling children’s diseases, and cultivating home gardens to supplement the family diet. This focus on “agriculture for men and home economics for women” cabins and undervalues rural women.

Clearly, rural women should be involved in development efforts—be it in agricultural or other forms. Yet abundant evidence suggests that women are not consistently included. Even when women have access to land, they often do not also have access to credit, technology, and extension services. Nevertheless, rural women’s agency and potential have not been entirely overlooked by international institutions. The following Part discusses the opportunity presented by CEDAW to empower rural women, with a particular focus on development.

III. CEDAW and Human Rights Protections for Rural Women

Equality for women has been a fundamental principle of the United Nations since its inception in 1945. Acting on this principle, the United Nations adopted CEDAW in 1979. The Convention recognizes that

140. Escobar, supra note 88, at 172; see also id. at 173-74 (detailing a case study in the Cauca Valley, Colombia, in which women’s societal status was diminished as a direct result of development intervention); Sourcebook, supra note 3, at 16, 175, 264 (observing that farms managed by women are typically less mechanized and lower in productivity than those managed by men); Fitzpatrick & Kelly, supra note 40, at 98 n.254 (arguing that International Monetary Fund structural adjustment policies tended to undermine women’s status by requiring States to reduce spending on social programs and eliminate subsidies for basic commodities).
141. Sourcebook, supra note 3, at 16 (reporting that women are often omitted from capacity development such as agriculture technology transfer because of the expectation that husbands and fathers will share the information with them).
142. Id.; see also Escobar, supra note 88, at 173–74 (discussing Colombian case study). “Extension services” refers to expert advice regarding farming techniques. These services are often provided by the State, but may also be delivered by NGOs. See Sourcebook, supra note 3, at 265 (describing extension services as providing information and training); U.S. Department of Agriculture, Cooperative State Research, Education, and Extension Service, http://www.csrees.usda.gov/qlinks/extension.html (last visited June, 3, 2009) (describing extension services provided by the U.S. Department of Agriculture to farmers in the United States).
women “suffer from various forms of discrimination because they are women.”[^144] The Convention requires parties to “eliminate direct or indirect discrimination in all spheres of life, improve women’s de facto position within society; and, address prevailing gender relations and discriminatory stereotypes.”[^145] More than ninety percent of the United Nations’ members—185 countries—are parties (hereafter “Member States” or “States”) to the Convention.[^146] The United States is the only country to sign but not ratify the treaty.[^147]

### A. CEDAW’s Article 14

CEDAW is unique among human rights treaties in that it specifically addresses the circumstances of rural women. Indeed, CEDAW’s Article 14 is entirely about this population. Article 14(1) recognizes “the particular problems faced by rural women” as well as “the significant roles which women play in the economic survival of their families” and calls on States Parties to “ensure the application” of the entirety of CEDAW to “women in rural areas.”[^148] This provision thus requires Member States to ensure that rural women, like their urban counterparts, enjoy all rights addressed by the Convention.[^149]

[^145]: CEDAW art. 4(1); U.N. doc. HRI/GEN/1Rev.8, at 337–45, ¶ 4; see also Cusack & Cook, supra note 144, at 206 (citing CEDAW, supra note 143, General Recommendation no. 25, at 4).

[^148]: CEDAW, supra note 143, art. 14(1).

[^149]: Article 10 also mentions rural women and deals specifically with ensuring women have equal rights in the field of education. It provides in relevant part:

> States Parties shall take all appropriate measures to eliminate discrimination against women in order to ensure to them equal rights with men in the field of education and in particular to ensure, on a basis of equality of men and women:

> The same conditions for career and vocational guidance, for access to studies and for the achievement of diplomas in educational establishments of all categories in rural as well as in urban areas; this equality shall be ensured in pre-school, general,
Article 14(2) goes further, enumerating particular rights for rural women. It provides:

2. States Parties shall take all appropriate measures to eliminate discrimination against women in rural areas in order to ensure, on a basis of equality of men and women, that they participate in and benefit from rural development and, in particular, shall ensure to such women the right:

(a) To participate in the elaboration and implementation of development planning at all levels;

(b) To have access to adequate health care facilities, including information, counseling and services in family planning;

(c) To benefit directly from social security programmes;

(d) To obtain all types of training and education, formal and non-formal, including that relating to functional literacy, as well as, inter alia, the benefit of all community and extension services, in order to increase their technical proficiency;

(e) To organize self-help groups and co-operatives in order to obtain equal access to economic opportunities through employment or self-employment;

(f) To participate in all community activities;

(g) To have access to agricultural credit and loans, marketing facilities, appropriate technology and equal treatment in land and agrarian reform as well as in land resettlement schemes;

(h) To enjoy adequate living conditions, particularly in relation to housing, sanitation, electricity and water supply, transport and communications.\(^{150}\)

\(^{150}\) technical, professional and higher technical education, as well as in all types of vocational training.

CEDAW, supra note 143, art. 10(a). Article 10 changed considerably over the course of its drafting, as suggested replacements for words often resulted in the inclusion of both words in the final text (e.g., “career and vocational guidance”). Lars Adam Rehof, Guide to the Travaux Préparatoires of the UN Convention on Discrimination Against Women 112 (1993). There is no clear indication of the reason behind the specific inclusion of rural women in this section, though earlier mention of the applicability of Articles 10 and 14 to rural women in particular had been made in Draft 4 in 1974. It was in this draft that Article 10’s education rights were applied to women in “rural as well as urban areas.” Id. at 153. Finland found this term too ambitious, noting the impossibility of establishing universities in both rural and urban areas of the country. ECOSOC, Draft Convention on the Elimination of All Forms of Discrimination Against Women, ¶ 115, U.N. Doc. E/CN.6/591 (June 21, 1976).

CEDAW, supra note 143, art. 14(2).
This eight-item list suggests that the drafters recognized specific ways in which rural women were or might be disadvantaged in comparison to or as distinct from their urban counterparts. Indeed, one might read this list as suggesting that rural women generally do not enjoy particular benefits, such as social security, health care, and education. In the same vein, one might interpret it as implying that women tend to be excluded from development planning, self-help groups, and community activities. The articulation of these guarantees would otherwise not have been deemed necessary. Alternatively, one might simply see this list as articulating the rights most valuable and fundamental to rural women even though some of them, such as the right to health care, are included elsewhere in CEDAW. Finally, inclusion of rights such as that to social security suggests the association of rurality with the informal (non-cash) economy.

1. The Drafting History

As the first international human rights instrument to recognize expressly rural populations, CEDAW implies the legal relevance of rural-urban difference. According to the Travaux Précédant, an article devoted to the rights of rural women was not suggested until Draft 5, three years into the drafting process, in 1976. The Article was incorporated after Egypt, India, Indonesia, Iran, Pakistan, Thailand, and the United States offered it as an amendment. India introduced a draft resolution proposing the additional article on rural women because it believed the draft did not yet sufficiently consider this population.

152. CEDAW, supra note 143, art. 12.
153. See Rehof, supra note 149, at 159 (noting France’s proposal that rural women enjoy the right to social security “when such a system exists in rural areas, at least for wage-earners”). Japan noted the lack of provision for social security for urban women who were not employed. Rehof, supra note 149, at 161 (citing U.N. Doc. A/C.3/33/L.47/Add.1, ¶ 172–74). The FAO urged the Commission on the Status of Women to give greater consideration to rural women—particularly those working in agriculture—within Article 11, which focuses on women’s employment. Id. at 154.

The association of rurality with the non-cash economy has persisted in the United States. See Pruitt, supra note 29, at 352. This Article 14 provision mandating social security for rural women might also be seen as suggesting the absence of law in rural places. Informal employment situations are common in rural places, and they are often accompanied by a lack of compliance with laws such as those regarding state-mandated benefits. See also infra notes 350–353 (discussing the relative absence of law and legal actors in rural places).
154. Id., supra note 151, at 305.
155. Rehof, supra note 149, at 153.

157. Id. at 154.
discussing whether to include what became Article 14 in the draft, the FAO saw an explicit distinction between rural and urban women desirable because of the dearth of health and welfare resources in rural areas.\footnote{158} 

The ultimate inclusion of rural women in CEDAW appears to have been largely uncontroversial,\footnote{159} though many countries commented on Article 14’s text during the drafting process.\footnote{160} Several countries’ comments were of a general character. Chad, for example, recognized the Article’s particular importance for developing countries.\footnote{161} Argentina thought Article 14 should include disadvantaged groups in both rural and urban areas,\footnote{162} while Hungary preferred to limit Article 14 to rural women.\footnote{163} 

Other countries commented on specific provisions of Article 14.\footnote{164} Subsections 2(a) and 2(g) make clear that a prominent goal of Article 14 is to allow women to participate equally with men in areas of agricultural and rural development.\footnote{165} Nevertheless, States disagreed about the details of subsection 2(a)’s right to participate in development planning. Countries debated the merits of the “at all levels” language versus specific mention of “local, regional or national levels.”\footnote{166} Regarding 2(c) about education, Kenya proposed the part that notes the purpose of improving women’s “technical efficiency,” while the United Kingdom suggested including functional literacy and access to extension servic-

\footnote{158. The U.N. Branch for the Advancement of Women clarified the reason for including “access to health care and family planning services” in Article 14(2)(b), explaining that health resources often did not reach this population, even when intended for them. \textit{Id.} at 158–59 (citing U.N. Doc. A/C.3/SS/L.47/Add.1, ¶ 149).} 

\footnote{159. \textit{But see} Rehof, supra note 149, at 154 (noting Finland’s concern about the difficulty of providing equal access to higher education in rural and urban places).}

\footnote{166. \textit{Secretary-General Report on CEDAW, supra note 163, ¶ 140.}}}
The United Kingdom also recommended inclusion of a provision relating to women’s ability to gain access to “credit and loans [and] appropriate technology.”\textsuperscript{168} The International Labor Organization (ILO) explained that the term “appropriate technology” suggested a realistic assessment of country conditions, including “human resources, currency available, impact on the labour market, labour-intensive versus capital-intensive technology, and the social consequences that the specific technology brings into a society.”\textsuperscript{169}

Bangladesh proposed inclusion of what would become paragraph 2(d), which provides for the right to organize self-help groups and cooperatives “in order to obtain equal access to economic opportunities through employment and self-employment.”\textsuperscript{170} Countries as diverse as Ghana and Sweden supported the proposal, noting that discrimination in these sectors exists in some countries.\textsuperscript{171} Bangladesh also proposed what became part of Article 14(2)(f), “the right to participate in all community activities.”\textsuperscript{172}

2. State Accountability

While not requiring a State Party to incorporate CEDAW’s tenets directly into their domestic legislation, CEDAW imposes a stronger burden than other conventions, like the International Covenant on Economic, Social and Cultural Rights (ICESCR).\textsuperscript{173} The ICESCR requires only that States “take steps ‘progressively’ to achieve the full realizations of rights.”\textsuperscript{174} By comparison, States that have ratified or acceded to CEDAW “are obliged to undertake all legislative and other appropriate measures to eliminate discrimination against women without delay.”\textsuperscript{175} Member States must also submit national reports within one year of ratification, and they must then submit reports at least every four years.\textsuperscript{176}

\textsuperscript{167} Id. ¶ 154; see also Rehof, supra note 149, at 161 (citing U.N. Doc. A/C.3/32/WG.1/CRP.6/Add.2, ¶ 20) (detailing the participation of Kenya and the Netherlands, among others).

\textsuperscript{171} Id.

\textsuperscript{172} Merry, supra note 147, at 80.

\textsuperscript{173} Id. (quoting Hanna Beate Schöpp-Schilling, CEDAW: A Key Instrument for Promoting Human Rights of Women, Address Delivered in St. Petersburg (Nov. 13, 2000)); see also Cusack & Cook, supra note 144, at 208–09 (expanding on the scope of state obligations under CEDAW and asserting the power and significance of the Convention).

\textsuperscript{174} Merry, supra note 147, at 80 (quoting Schöpp-Schilling, supra n. 174).

\textsuperscript{175} CEDAW, supra note 143, art. 18.
The reports, required by Article 18 of CEDAW, should describe the measures the countries take to comply with their treaty obligations.\textsuperscript{177} Article 18 gives Member States broad discretion regarding what information to include in their reports. They may include, for example, “factors and difficulties affecting the degree of fulfillment of obligations under CEDAW.”\textsuperscript{178} The CEDAW Committee draws on the reports to craft specific recommendations and questions for hearings held with high-ranking officials of States.\textsuperscript{179} Many scholars recognize that while CEDAW is a binding treaty with admirable goals, it appears aspirational in nature, with an expectation-setting agenda that has the air of soft law.\textsuperscript{180} Human rights treaties generally contain monitoring provisions, and CEDAW imposes only periodic reporting requirements of measures taken to implement the Convention.\textsuperscript{181} Although Member States’ reports may expose non-performance or breach, according to Hilary Charlesworth and Christine Chinkin, “there is no tradition of censure by the treaty bodies but rather one of ‘constructive dialogue,’ which is unlikely to lead to change in the face of intransigence.”\textsuperscript{182} Additionally, States often submit late or erroneous reports.\textsuperscript{183}

\textsuperscript{177} Id. art. 18(1). In addition to Article 18’s reporting requirements, the United Nations Development Fund for Women published guidelines in 2006 that elaborate on how government budgets and budget policy-making processes can be monitored for compliance with human rights standards, particularly with CEDAW. See generally Diane Elson, Budgeting for Women’s Rights: Monitoring Government Budgets for Compliance with CEDAW (U.N. Dev. Fund 2006). Other guidelines are available to assist States in preparing these reports; they encourage the initial report to be a “detailed and comprehensive description . . . [and] to provide a benchmark against which subsequent progress can be measured.” See U.N. Div. for the Advancement of Women, CEDAW Reporting, http://www.un.org/women watch/daw/cedaw/reporting.htm#guidelines (last visited May 18, 2009).

\textsuperscript{178} CEDAW, supra note 143, art. 18(2).

\textsuperscript{180} See Upendra Baxi, What May the ‘Third World’ Expect from International Law?, in International Law and the Third World: Reshaping Justice, supra note 128, at 9, 17; Amanda Ulrich, Can the World’s Poorest Women Be Saved?: A Critical Third World Feminist Analysis of the CEDAW and Alternative Approaches to Women’s Economic Empowerment, 45 Alta L. Rev. 477, 492–93 (2007) (arguing that CEDAW’s “failure to take into account the status and societal context of rural woman” makes it unlikely to help rural women reach their full economic potential without attention to local practices concerning power structures, co-ops, and other self-help groups).

\textsuperscript{182} Id.

In response to these concerns, the General Assembly adopted the Optional Protocol to CEDAW on Oct. 6, 1999. The Optional Protocol was intended not only “to improve on and add to existing enforcement mechanisms for women’s human rights” but also “to improve States’ and individuals’ understanding of CEDAW.” To these ends, the Optional Protocol introduces two new features: an individual complaints procedure and an inquiry procedure. Under Article 6, individuals or groups may make complaints against States that are parties to the Optional Protocol, but only after exhausting domestic remedies. These procedures allow the Committee to recommend changes that affect the structural causes of violations and to “address a broad range of issues in a particular country.” States that are parties to the Optional Protocol must publicize its procedures, thus increasing public awareness of CEDAW, the Optional Protocol, and these procedures. Nevertheless, the Optional Protocol is not meant to be a legally enforceable tool, but rather a way to encourage Member States to take steps toward full implementation of CEDAW by changing discriminatory laws and practices. To date, no complaint adjudicated under the Optional Protocol relates to Article 14 or to a rural context.

B. State Responses to CEDAW’s Article 14: The Tales of Four Countries

To get a sense of how Member States have responded to Article 14, this Section considers the most recent reports filed by four countries pursuant to their Article 18 obligation. China, India, Ghana, and South Africa were selected because of the geographic variety they represent, and also because each features a relatively sharp divide between rural

188. Why an Optional Protocol?, supra note 185.
189. OP-CEDAW, supra note 184, art. 13.
and urban. That is, each country has at least one major city, as well as dramatically less developed rural areas.

The country reports submitted by China (covering 1998–2004), Ghana (covering 1991–2004), India (covering 1999–2005), and South Africa (initial report, filed in 1998) reveal common themes with regard to the problems rural women face. They also reveal commonalities among Member States’ responses to these challenges, responses that have more often been programmatic than in the nature of law reform.

A 1991 UNITAR manual on reporting requirements under CEDAW suggests that States report the percentage of women in agriculture and other statistical information, such as the balance between the rural and urban population. It also suggests that reports include information about the pay rates for men and women in rural areas. While none of the four countries considered provides pay rate information, all provide some population demographics data. China reports that almost sixty-four percent of the population lives in rural areas, but the majority of its report focuses on major urban centers. In fact, only one of the tables in China’s report addresses the nation’s rural population. India reports that seventy percent of the nation’s female population is rural. Ghana does not specify its rural female population but indicates that sixty-six percent of the county’s population is rural. South Africa states that women dominate its rural population but provides no further detail.

201. India, supra note 194, at 85.
203. South Africa, supra note 162, at 94.
1. Access to Land

Each of the four Member States’ reports discusses the importance of land access to rural women’s circumstances and opportunity, including their right to inherit. Statistics from India and Ghana illustrate the dramatic inequality between men and women. Although nearly ninety percent of the entire Indian female workforce is concentrated in the agricultural sector, most women are not land owners. Ghanaian women’s rights to land are very limited, even though women are responsible for seventy percent of the food produced and ninety percent of the food chain (that is, production, processing, and distribution).

Some reports suggest that they are, however, making progress toward greater access to land for women. In China, the Rural Land Contracting Law of 2002 (RLCL) reportedly requires gender equality in land contracting. During a new round of land contracting in 1999–2000, China’s State Council requested “county governments to supervise land contracting transactions and immediately remedy any violations of women’s rights and interests in land contracting.” The National People’s Congress consequently promulgated RLCL, which addresses issues of land contracting by married, divorced, or widowed women. Contract issuers who violate the RLCL face civil liability.

India’s law reform efforts to ensure greater female access to land appear more extensive than China’s. The Indian government issues title deeds for new land grants jointly in the name of the wife and husband.

204. China, supra note 192, at 53; Ghana, supra note 193, at 59; India, supra note 194, at 12; South Africa, supra note 162, at 95–96.
205. E.g., India, supra note 194, ¶ 279 (noting further that a “proposed amendment to the Hindu Succession Act would provide that daughters get equal rights in ancestral property”).
206. India, supra note 194, ¶ 319.
207. Ghana, supra note 193, ¶ 145.
208. Sourcebook, supra note 3, at 126–27 (observing that formal legislation giving women rights in land is rarely sufficient because of difficulty in enforcing the laws, especially outside major urban areas); see also Marjolein Benschop & M. Siraj Sait, Progress Report on Removing Discrimination Against Women in Respect of Property and Inheritance Rights, ¶ 4.3 (UN-HABITAT, Tools on Improving Women’s Secure Tenure Series No. 2, 2006) [hereinafter UN-HABITAT] (“[S]tatutory or Constitutional interventions are ineffective in circumstances where local laws and customs do not recognise gender equal inheritance rights to land, property and housing for women.”).
209. China, supra note 192, at 53.
210. Id. at 52–53.
211. Id. at 53.
212. Id. Further, the law protects “a woman’s responsibility [for] fields even after she gets married or divorced,” in other words, a woman’s responsibility for fields for growing grain rations and land for housing construction. Id.
213. India, supra note 194, ¶ 28. A joint title deed grants some protection to the wife’s land rights, even if the marriage ends. Id. ¶ 280. Further, house rentals allotted under the low-income housing program, Indira Awas Yojana (IAY), are issued in the name of the female
A pilot program attempts to improve women’s access to land by providing leases on community wasteland, fallow land, or surplus land to women’s self-help groups (SHGs). India also encourages its states to implement measures that promote effective land rights for women and recognizes the need to create institutional capability in the rural housing sector.

The reports of the African nations are less positive, citing patriarchy and polygamy among other obstacles to women’s access to land. Ghana acknowledges that the traditional patrilineage system and widespread polygamy seriously impede women’s ability to acquire and retain land. Its report also notes barriers to de facto gender equality in land access. Under customary laws, the male head of the family administers all property belonging to the family. The Intestate Succession Law (ISL) of 1985 radically changed how property is distributed if the head of the family dies without a will. Prior to the ISL, the extended family inherited a greater portion of the deceased’s estate than did the wife and children, who were “left with very little, or nothing at all.” The ISL “provides a uniform system of property distribution,” but its implementation is rife with problems. Among these problems is polygamy, which results in fragmented land parcels. Another issue is member of the household, or in the joint names of the spouses. Joint title deeds to spouses are also issued when India periodically redistributes surplus land.

214. Id. ¶ 281.

215. Id. Such schemes are reported to be quite successful. For example, the Scheduled Caste Development Corporation (SCDC), in the state of Andhra Pradesh, provides subsidized credit to women’s self-help groups (SHGs) to purchase or lease private land on the marketplace.

216. Id. ¶ 319.

217. Studies indicate that women held land in only 10% of Ghanaian households while men held land in 16–23% of households; women are 5% of registered landholders in Kenya. Further, the size of men’s land holdings were, on average, almost three times those of women. Sourcebook, supra note 3, at 15 (citing Carmen D. Deere & Cheryl Doss, Gender and the Distribution of Wealth in Developing Countries (World Institute for Development Economics Research of the United Nations University, Research Paper No. 2006/115, 2006)).

219. Id. ¶¶ 7, 204. The practice of multiple marriages by one husband (women are not allowed to have multiple husbands) seems to lessen as the social foundations for the existence of polygamy gradually erode. In rural areas, however, subsistence farming may require as many children working as farmhands as possible.

220. Id. ¶ 204(j).

221. Id. ¶ 205; see also Cotula et al., supra note 64, at 37 (noting that customary and statutory land tenure systems often co-exist in Ghana).

222. Ghana, supra note 193, ¶ 205(a).

223. Id.

224. Id.

225. Id. ¶ 205(b).
the valuation of the wife’s contributions to acquisitions of property. Currently, “proof of substantial contributions for claiming part or full ownership of the property” is required.\(^{226}\) Ghana has suggested that the law should be changed to reflect the value of women’s domestic contributions.\(^{227}\)

South Africa’s report notes that customary laws prevent women from owning land. The report indicates, however, that the government is working to raise women’s awareness of their rights under the new Land Reform Programme.\(^{228}\) The Programme has three components: (1) redistribution of land to the poor (that is, to labor tenants, farm workers, etc.); (2) land restitution, “which covers cases of forced removals that took place after 1913,” at which time only men were allowed to own land; and (3) land tenure reform, which includes community tenure.\(^{229}\) Because land is traditionally held only in the name of the male member of a household, and because the new legislation tends to favor the named tenant, the South African government is studying ways to reform the law to provide equal access to women in tenancy.\(^{230}\)

Further, the government established the Women’s Land Rights Sub-directorate (WLR) of the Ministry of Land Affairs. The WLR devised a Land Reform Gender Policy: a plan of legislative and administrative measures to give women equal rights to economic resources.\(^{231}\) In many traditionally male-dominated rural South African communities, however, the current gender-neutral legislation has been inadequate in providing women land access (that is, both land ownership and leasing).\(^{232}\) This situation points out the significance of attending to CEDAW’s overarching goal of achieving substantive equality, which includes challenging traditional gender roles and stereotypes where they undermine that goal.

2. Earmarked Funds to Assist Rural Women

India, China, and, to some extent, Ghana have earmarked funds to assist individual women, or women’s self-help groups (SHGs) and collectives.\(^{233}\) In India, the Women Component Plan guarantees that women receive at least thirty percent of all developmental disbursement funds.\(^{234}\)

\(^{226}\) Id. ¶ 205(e).
\(^{227}\) Id. ¶ 205(f).
\(^{228}\) South Africa, supra note 162, at 95.
\(^{229}\) Id.
\(^{230}\) Id.
\(^{231}\) Id.
\(^{232}\) South Africa, supra note 162, at 96.
\(^{233}\) China, supra note 192, at 44, 50; Ghana, supra note 193, ¶ 31(f), 175, 192; India, supra note 194, ¶¶ 82, 313.
\(^{234}\) India, supra note 194, ¶ 313. The Women Component Plan is aimed at ensuring that the “benefits from other developmental sectors do not by-pass women.” Id. This strategy is
Moreover, the Indian rural antipoverty program earmarked about forty percent of its funds for women’s SHGs.\textsuperscript{235} India’s Common Minimum Programme proposed further expansion of earmarked funds, setting aside as much as one-third of the total available funds for women’s development projects.\textsuperscript{236} Such designated funds are used to establish education centers and boarding schools,\textsuperscript{237} student dormitories or hostels,\textsuperscript{238} health-care centers,\textsuperscript{239} female-only wash-houses and latrines,\textsuperscript{240} literacy centers,\textsuperscript{241} and other poverty alleviation programs\textsuperscript{242} aimed at assisting rural women.

In Ghana, the Ministry of Women and Children’s Affairs (MOWAC) established the Women’s Development Fund (WDF), which distributes microloans to women’s SHGs and coordinates skills training and other programs.\textsuperscript{243} The WDF “is exclusively targeted at women in small-scale enterprises in selected economic activities.”\textsuperscript{244} By 2005, the WDF had distributed loans to over 200,000 women.\textsuperscript{245} WDF loan applicants do not have to show collateral if they have formed SHGs.\textsuperscript{246}

The Chinese government similarly formulated a development strategy with a particular focus on women and children living in its poor, western rural regions.\textsuperscript{247} The program consists of government-sponsored projects for anti-desertification and reforestation of land, micro-credit schemes, literacy and technology training, and infrastructure enhancement.\textsuperscript{248}
3. Self-Help Groups, Cooperatives, or Women’s Federations

All four countries have used SHGs, cooperatives, and women’s federations to improve the living conditions of rural women. The Indian government uses SHGs,\(^ {249}\) or women’s collectives,\(^ {250}\) as a primary strategy for enhancing rural women’s livelihoods. About 84% of the Indian SHGs are women-only groups,\(^ {251}\) and India reports that SHGs have enabled nearly two million poor, rural families to gain access to the “formal banking system.”\(^ {252}\) These collectives are organized at the village level and provide opportunities for women to discuss specific problems, explore solutions, and vie for local political office.\(^ {253}\)

In China, women’s federations are similarly major actors in the implementation of governmental policy.\(^ {254}\) Women’s federations “coordinate with pertinent sectors to provide on-the-job training”\(^ {255}\) and they participate in disbursing micro-loans to rural women.\(^ {256}\) The governments of Ghana and South Africa encourage the establishment of rural women’s SHGs.\(^ {257}\) Such cooperatives receive funds directly,\(^ {258}\) are platforms for women’s education\(^ {259}\) or the establishment of day care programs,\(^ {260}\) and operate as political fora.\(^ {261}\)

4. Micro-Credit Programs

Each of the four Member States considered has established micro-credit programs and organizations to assist rural women in their efforts to open small businesses.\(^ {262}\) These often function in connection with

\(^{249}\) *India*, supra note 194, *passim*. SHGs or cooperatives.\textsuperscript{263} India’s Rural Women’s Development and Empowerment Project, for example, allocates income-generating funds to many SHGs.\textsuperscript{264} The National Bank for Agricultural and Rural Development similarly focuses on micro-financing SHGs.\textsuperscript{265} In spite of these institutions’ efforts, fewer than fifteen percent of the loans they disbursed went to “women as ‘small borrowers.’”\textsuperscript{266} The government of Ghana has also established specialized schemes, such as the Women’s Development Fund, to provide micro-loans through rural banks to women’s enterprises.\textsuperscript{267} In South Africa, the Department of Welfare provides resources to facilitate the establishment of day-care centers in rural areas.\textsuperscript{268} Another proposed South African program would grant “women the right to use property registered in the name of their spouses” as collateral for loans.\textsuperscript{269} China similarly provides micro-credit to rural women-owned enterprises.\textsuperscript{270} These loans are either underwritten by local women’s federations\textsuperscript{271} or via rural credit cooperatives.\textsuperscript{272} Such small loans have between a ninety-five and ninety-nine percent loan return rate, making them a sound investment.\textsuperscript{273}

\textsuperscript{263} See supra notes 249–262 and accompanying text.
\textsuperscript{264} India, supra note 194, ¶¶ 200, 310; see also id. ¶ 82 (noting how SGSY, the rural poverty reduction program, distributed micro-credit loans to over 220,000 SHGs); id. ¶ 103 (explaining that government sponsored SHGs of asset-less scheduled caste (SC) women are able to access micro-credit financing for income-generating activities); id. ¶ 107 (reporting that the National Scheduled Castes Finance and Development Corporation introduced a micro-credit scheme that has served almost 60,000 SC women from very poor families); id. ¶ 281 (detailing a similar Scheduled Caste Development Corporation that operates in Andhra Pradesh, providing subsidized credit to SC women’s groups to purchase or lease land for community cultivation); id. ¶ 286 (describing a state program in Kerala, which created an informal bank that provides rural women with savings and credit operations, thus encouraging them to take up micro-enterprises); id. ¶ 285 (noting further that some programs allow for a higher loan-to-value percentage for projects lending to women entrepreneurs).
\textsuperscript{265} Id. ¶ 225 (describing micro-finance institutions that operate as credit cooperatives or credit unions, as well as several other NGOs that set up micro-finance schemes for the rural poor).
\textsuperscript{266} Id.
\textsuperscript{267} Ghana, supra note 193, ¶¶ 31(f), 175, 192. Several schemes are available to rural women farmers, including, for example, the Agricultural Development Bank’s credit lines, the District Assembly Common Fund, and the Land Conservation and Small Holder Rehabilitation Project. Id. ¶¶ 192(a)–(b). The NPRP Social Investment Fund targets rural communities, providing micro-credit to rural women. Id. ¶ 192(i). Other programs are aimed at improving women’s technological knowledge, such as the Technological Capitalization for Training for Rural Women and the Women in Agricultural Development Division. Id. at ¶ 192(c).
\textsuperscript{268} South Africa, supra note 162, at 68.
\textsuperscript{269} Id. at 96.
\textsuperscript{270} China, supra note 192, at 49.
\textsuperscript{271} Id.
\textsuperscript{272} Id. at 49–50.
\textsuperscript{273} Id. Ghana also estimates a high return rate (98%) on micro-loans to women. Ghana, supra note 193, ¶ 31(f).
In addition, China, India, and Ghana have established programs to organize rural women in creating new “green” industries. These programs address reforestation and land reclamation,\textsuperscript{274} in addition to solar,\textsuperscript{275} electric,\textsuperscript{276} natural gas,\textsuperscript{277} and other energy improvement projects.\textsuperscript{278} China reports that about 120 million women participated in its reforestation programs between 2001 and 2004.\textsuperscript{279}

5. Specialized Schools for Rural Girls, Adolescents, and Women

Recognizing that addressing the gender gap in education is a primary vehicle for empowering socially and economically marginalized women, China and India have implemented a number of programs to close this gap.\textsuperscript{280} Female illiteracy is higher than male illiteracy in each of the four countries,\textsuperscript{281} and the traditional priority given to educating male children persists.\textsuperscript{282} In addition, rural women’s health education is generally deficient, especially with regard to contraception and reproductive health.\textsuperscript{283} Further education with respect to hygiene and sanitation is also necessary.\textsuperscript{284}

India has established a national education program aimed specifically at rural girls’ primary education.\textsuperscript{285} This initiative succeeded in bringing about ninety percent of rural children within one kilometer of a primary school.\textsuperscript{286} China’s compulsory primary education program provides girls greater flexibility, allowing them to attend schools part-time,\textsuperscript{287} and together with a younger sibling.\textsuperscript{288} The Chinese program

combines girls’ literacy programs with farming and vocational education.\(^{289}\) To close the persistent gender gap in science and math, Ghana established clinics focusing on those subjects for girls in rural areas,\(^{290}\) along with a variety of other programs to enhance girls’ education.\(^{291}\) South Africa enacted a compulsory education law,\(^{292}\) but its report acknowledges that “religious, cultural, and social practices” still prevent girls’ school attendance.\(^{293}\)

Correspondence schools or broadcast programs, which are free to women,\(^{294}\) provide a significant portion of rural adult education in China.\(^{295}\) Other programs provide both literacy education and skills training.\(^{296}\) India established women-only schools for adults, as well as day-care centers, in rural areas.\(^{297}\) Other specialized programs also provide skill and literacy education to rural women in India.\(^{298}\)

---

289. Id. at 33–34 (noting further that in remote areas, boarding arrangements are made to facilitate girls’ attendance). Further, several NGOs have lent support to the compulsory education effort. For example, The Hope Project, launched by the China Youth Development Foundation, raised sufficient funds to build over 8,000 “Hope Primary Schools,” thus helping 2.3 million drop-out children return to school. Similarly, the All China Women’s Federation and the China Children and Teenagers’ Fund jointly organized and launched the “Spring Bud Plan” to support schooling of girls from poor families. So far, the Plan has helped 1.3 million girls return to school. Id.

298. Id. ¶ 98. The Indian Ministry of Rural Development established a program to organize training workshops and seminars to educate rural women, to encourage them regarding
In South Africa and Ghana, on the other hand, rural adult basic education and training programs are scarce, and female drop-out rates are high. Even where such programs exist, they teach primarily traditional women’s vocations. Socio-cultural inhibitions persist as barriers to the training of women in trades that are traditionally the preserve of men.

6. Health Care Delivery

All four countries acknowledge that urban women are in better health than rural women. Each has developed different solutions to this problem, responding to geographic features such as the size of the territory and the nature of the terrain covered. South Africa grants free health care to all residents and offers mobile clinics that provide rural women with access to general and reproductive health services. India established a subsidized Universal Health Insurance Scheme and rural health centers under the National Rural Health Mission. Sixty percent of Ghanaian women have health care facilities within eight kilometers of their residence. China earmarks funds for the provision of maternal and infant health centers in rural areas. As a result, between 1995 and

participation in the political process, and to transform their gendered roles. Id. ¶ 174. Additionally, “Community Polytechnics have been started with the aim of bringing community/rural development through science and technology applications and skill-oriented non-formal training with focus on women,” especially minority or lower caste women living in remote, rural areas. Id. ¶ 204. The Mahila Mandal Programme and the Welfare Extension Project both provide adult literacy and social education services to rural women and children. Id. ¶ 305.

305. Id. at 87, 99.
306. India, supra note 194, ¶ 258 (stating that about 48% of the recipients of the subsidies were rural families).
307. Id. ¶¶ 245, 248. The National Rural Health Mission identified “18 states [that] have weak public health indicators and/or weak infrastructure.” Id. The program aims to correct the very structure of the public health system by creating District Plans for Health, which integrate health management policies with other health concerns like sanitation, hygiene, nutrition, and safe drinking water. Id. It also seeks to improve rural people’s access to affordable healthcare, with a focus on women and children. Id. ¶ 248.
308. Ghana, supra note 193, ¶¶ 152(a), 158 (describing a draft Gender and Health Policy designed to improve, inter alia, the health delivery system in Ghana, including in less developed rural regions).
309. China, supra note 192, at 43–44.
2000, China established more than 3,000 new maternal and infant health centers in rural areas. Nevertheless, in many rural parts of China, especially those with high poverty rates, the lack of health care facilities and personnel persists.

7. Countering Oppressive Traditions

Each of the four countries surveyed has unique cultural traditions that result in the oppression of women. While India struggles to rehabilitate the “scheduled castes” (SC), China faces the problem of sex-selective abortions and the abandonment or infanticide of female babies. Ghana has long sought to eradicate customary laws allowing polygamy, while South Africa struggles to counter the consequences of nearly a half-century of apartheid. These problematic practices tend to be more prevalent, and their consequences more aggravated, in remote, rural areas.

In India, for example, most SC individuals live in the rural areas, where they traditionally engage in waste collection and scavenging. The government’s poverty alleviation programs specifically allocate funds to rural SC women. The Indian government also established

310. Id. at 44.
311. Id. at 48. Another especially persistent health-related problem is rural women’s suicide in China. Id. at 57 (“[T]he health authorities are looking into ways to coordinate various departments in strengthening public health and mental health education, [and] expanding service networks in rural areas . . .”).
312. India, supra note 194, ¶¶ 92, 100.
313. China, supra note 192, at 46–47.
315. South Africa, supra note 162, at 4, 8.
316. Id. at 94 (describing South Africa’s apartheid policies, which exacerbated rural poverty and in turn reinforced and insulated discriminatory cultural practices). Women and children outnumber men in rural population, yet they rarely have control over their livelihoods. Id. at 96. For other examples of how these practices are more prevalent and their consequences greater in rural locales, see China, supra note 192, at 48 (reporting that humane family planning practices are still hindered in rural areas because of lack of health care facilities and medical personnel); Ghana, supra note 193, ¶ 204(g)(j) (reporting that polygamy was widely practiced in rural areas, where farming practices necessitated having more children to work as farmhands); India, supra note 194, ¶ 92 (reporting that 81% of SC members live in rural areas and that most practice scavenging).

The persistence of traditions in rural areas in these countries is similar to such persistence in the United States, where it is generally attributed to the homogeneity of the population, the high density of acquaintanceship, and a lack of external forces to challenge norms. See generally Pruitt, supra note 29; infra notes 360–362.
317. India, supra note 194, ¶ 92.
318. Id. ¶ 100.
319. Id. (noting that the National Scheme of Liberation and Rehabilitation of Scavengers was modified to involve NGOs in the implementation of scavenging eradication programs, and reporting on the National Safai Karamcharis Finance and Development Corporation, which promotes economic development and self-employment among the scavenging com-
literacy education districts in low-literacy pockets, mostly populated by SCs, and it relaxed population threshold requirements to allow more local schools to open. Boarding schools and hostels for SC girls allow them to attain higher levels of education. To facilitate SC women’s land acquisition efforts, the government allotted 36% of 6.5 million acres of surplus land to SC members in husband-and-wife joint titles. SC women who live below the poverty line also have access to low-income housing. Despite all these efforts, poverty is persistently higher among the SC population than among others, and rural SC women live in much worse conditions than do other rural women or urban women.

In Ghana, women do not enjoy equality with men in land ownership and rental, even though the vast majority of the Ghanaian food production chain is in women’s hands. Customary laws dictate that land rights vest in the husband, and the wife’s rights terminate if the marriage fails. Even though Ghana outlawed patrilineage, customary laws still hold sway in the rural areas of Northern Ghana, where women cannot inherit land or cattle. The practice of polygamy further impoverishes women because the husband must provide for several families and implements various micro-finance schemes designed to assist scavenging and their dependent daughters to take up self-employment enterprises).

330. \textit{Id.} ¶ 176; \textit{see also} Cynthia Grant Bowman & Akua Kuenyehia, Women and Law in Sub-Saharan Africa (2003) (discussing extensively women’s perspectives on law in Sub-Saharan Africa, particularly with respect to family law, access to land, inheritance laws, and reproduction).
331. \textit{Id.} ¶ 205(a) (reporting that the Intestate Succession Law of 1985 (ISL) provides a uniform system of property distribution if the deceased dies without a will, regardless of surrounding customary marriage and family laws).
332. \textit{Id.} ¶ 205(b)–(j); \textit{see also} Sourcebook, \textit{supra} note 3, at 126–27 (noting the global phenomenon of incongruity between national legislation and local custom).
After his death, land is divided into smaller parcels that cannot be farmed efficiently. The government of Ghana has undertaken efforts to eliminate polygamy and to educate women about their right to land ownership, but these efforts have met with limited success.

C. Summary: CEDAW’s Unrealized Potential for Rural Women

This summary of four States’ responses to CEDAW’s mandate regarding rural women suggests government attention and resources have sought to address several concerns. It also, however, indicates remarkably little progress related to two key provisions of Article 14. The first is agriculture-related education and technology. Despite their importance to rural women’s livelihoods, subsection (2)(d)’s requirement of “all types of training and education [including] all community and extension services, in order to increase their technical proficiency,” and subsection (2)(g)’s requirement of access to “appropriate technology” are not addressed in the four Member States’ reports considered above. This absence suggests a lack of attention to two types of resources that have the potential not only to empower women, but also to enhance food security for entire communities, even regions.

The second omission regards women’s integration into “the elaboration and implementation of development planning at all levels,” as required by Article 14(2)(a). The four reports do not explicitly discuss women’s involvement in development planning as such. Nevertheless, some countries’ earmarks of funds for women—including in support of cooperatives, SHGs, and micro-finance institutions—might serve this purpose in a somewhat piecemeal way. By economically empowering rural women, these programs effectively permit the women to make policy at the lowest level, that is, in determining how they use the credit received and which investments they make. Further, to the extent that local SHGs and cooperatives have a say in development planning at local or regional levels, Member States’ support of these organizations

333. Id. ¶¶ 204(b)–(d).
334. Id. ¶ 204(c).
335. Id. ¶¶ 204(e), 204(g)–(h). An important effect of compulsory education as mandated by the Children’s Act of 1997 is that it requires parents to send their children to school. This necessitates considerable expenditures per child, which in turn makes polygamy much less attractive. Id. ¶ 204(i).
336. Ghana, supra note 193, ¶¶ 205(a), 205(c), 210(d).
337. Id. ¶ 28; see also id. ¶ 205(h) (discussing a recent study, commissioned by the National Council of Women and Development “on women’s rights in relation to marriage and the family, [which] revealed that women’s unequal status in marriage and the family is frequently based on traditional, customary and religious attitudes that confine women to particular roles [and that] [t]hese attitudes are deeply entrenched and resistant to change”).
338. CEDAW, supra note 143, art. 14(2)(a).
may effectively empower women to participate in the elaboration and implementation of planning at higher scales, too.\footnote{339}{Scale is a concept used by critical geographers to measure the companion concepts of space and place. \textit{See} Ann R. Tickamyer, \textit{Space Matters! Spatial Inequality in Future Sociology}, 29 Contemp. Soc. 805, 811 (2000). Scale is defined as “the level of geographical resolution at which a given phenomenon is thought of, acted on or studied.” Neil Brenner, \textit{New State Spaces: Urban Governance and the Rescaling of Statehood} 9 (2004), \textit{quoted in} Hari Osofsky, \textit{A Law and Geography Perspective on the New Haven School}, 32 Yale J. Int’l L. 421, 447 (2007).}

In the four Member States considered, then, Article 14’s potential seems to be least realized with respect to two critical issues. Both involve the rural-specific matter of agricultural or rural development. The first relates to women’s access to the type of education and technology that would make them more productive farmers, and the second relates to their participation in decisionmaking about the course that development should take.

Another persistent problem is the conflict between international norms and local customs, which function as \textit{de facto} sources of law in some places. The next Part discusses CEDAW’s potential to address such conflicts. In particular, that Part takes up Article 14’s multi-scalar approach, which accommodates legal pluralism. It is an approach that recognizes the value in empowering women not only with national and international legal mandates, but also at the village level. In short, it endorses a dual strategy: bottom-up and top-down.\footnote{340}{\textit{See Posting of Lisa R. Pruitt to Legal Ruralism Blog, Working from Bottom Up in Afghanistan’s Rural Areas}, http://legalruralism.blogspot.com/2009/02/working-from-bottom-up-in-afghanistans.html (Feb. 17, 2009, 19:58 PST) (discussing the importance of grassroots efforts to influencing rural populations).}

\section*{IV. Rurality, Rights, Custom, and the Role (or Absence) of Law}

In Development as Freedom, Amartya Sen argues for a shift in the development paradigm. He calls for attention to expanding the freedoms and capabilities of individuals, rather than merely alleviating poverty or seeking to improve material standards of living.\footnote{341}{Amartya Sen, \textit{Development as Freedom} 3–11, 282–83, 298 (1999).} Martha Nussbaum similarly advocates developing women’s capabilities.\footnote{342}{Nussbaum, \textit{supra} note 6, at 70, 290.} She also acknowledges the salience (albeit overlooked, she observes) of the rural-urban axis.\footnote{343}{\textit{Id.} at 225; \textit{see also} Gonzalez, \textit{supra} note 34, at 492 (discussing the power held by small agricultural producers in comparison to the “monopoly power exercised by transnational business,” as an example of power disparities across the rural-urban axis).}
One way in which to expand the freedoms and capabilities of rural women is to engage them in the planning and implementation of agricultural and other rural development, as CEDAW’s Article 14 stipulates, “at all levels.”\footnote{CEDAW, supra note 143, art. 14(2)(a). The Gender in Agriculture Sourcebook, a joint publication of the FAO, IFAD, and the World Bank, advocates women’s inclusion in “designing, planning, and implementing” development programs, just as CEDAW mandates. The Sourcebook specifically contemplates not only legislation that responds to women’s lack of access to land, but also regulations that implement that legislation “in ways that address gender bias.” Sourcebook, supra note 3, at 130.} This right, like many of those enumerated in Article 14, is not of the standard civil rights variety (for example, freedom of speech). Rather, along with Article 14’s mandate to include rural women in social security programs and provide them adequate health care, it is more in the nature of socioeconomic rights.\footnote{These rights include, for example, the right to food, clothing, and shelter. See generally Heinz Klug, The Dignity Clause of the Montana Constitution: May Foreign Jurisprudence Lead the Way to an Expanded Interpretation?, 64 Mont. L. Rev. 133 (2003) (discussing socioeconomic rights as a component of dignity); Denise Meyerson, Equality Guarantees and Distributive Inequity, 19 Pub. L. Rev. 32 (2008) (discussing socioeconomic rights in relation to equality guarantees); Brian Ray, Policentrism, Political Mobilization, and the Promise of Socioeconomic Rights, Stan. J. Int’l L. (forthcoming 2009) (discussing socioeconomic rights in the context of the South African Constitution).} CEDAW’s Article 14 thus seeks to confer agency on rural women in ways that have material consequences on the ground, where they are, at the local or village scale. Other examples are the right to “participate in the elaboration and implementation of development planning,”\footnote{Id.} the right to “obtain equal access to economic opportunities” by organizing in SHGs,\footnote{Id. art. 14(2)(e).} and the right “to have access to agricultural credit and loans, marketing facilities, appropriate technology, and equal treatment in land and agrarian reform.”\footnote{Id. art. 14(2)(g).}

Despite the inclusion of these unique enumerated rights, CEDAW’s lack of an enforcement mechanism leads many to view the Convention as ineffective at achieving reform.\footnote{See supra notes 181–183 and accompanying text. To date, CEDAW’s power to effect change has proven limited. See id. None of the complaints adjudicated under the Optional Protocol relates to Article 14 or to a rural context. See CEDAW: Decisions/Views, supra note 187. But see, e.g., Cusack & Cook, supra note 144 (asserting generally the power and significance of CEDAW).} Its ineffectual character may take on added dimensions in rural places. While an unstated premise of my discussion of CEDAW has been that such formal legal instruments matter, that premise is worth particular interrogation in relation to rural places. The absence of law is a recurring theme in scholarship about rurality in the United States,\footnote{See generally Robert Ellickson, Order Without Law (1991) (arguing that ranchers in Shasta County, California mediated disputes among themselves without reference to law).} and such an absence may be similarly

---

\footnote{CEDAW, supra note 143, art. 14(2)(a).}
characteristic of rural places in the developing world. The GENDER IN AGRICULTURE SOURCEBOOK, for example, notes that “formal law and state institutions often have limited effectiveness beyond major urban areas” and that in many countries “the [S]tate and its institutions, including the judiciary, exert only a weak presence” in rural places.\(^\text{351}\)

This means that even where domestic laws confer land rights upon women, a State may lack, or be “unwilling to commit, [sic] resources to advocating, promoting, enforcing, and protecting” those rights.\(^\text{352}\) Without enforcement, such laws become meaningless and local customs prevail.\(^\text{353}\) In other words, the power of the rule of law, especially as reflected in international and national law, may vary across the rural-urban axis. This presumably makes law a less formidable force in rural places, if not entirely irrelevant there.

But a relative absence of national and international law is not all that sets rural places apart from urban ones in terms of CEDAW’s effective operation. Local sources of authority are more entrenched in rural areas, and these have gendered consequences. As noted in Part III.B.7, customary practices may present particular problems for rural women. The GENDER IN AGRICULTURE SOURCEBOOK observes that rural women “often do not possess the financial resources, knowledge and capacity to go against social norms and may not exercise their legal rights.”\(^\text{354}\) The SOURCEBOOK further explains that “women’s secondary status, lower socialization, undervalued productive work, and illiteracy” may deter them from asserting their legal rights.\(^\text{355}\) They may be reluctant to participate in “institutions and activities seen as men’s domains.”\(^\text{356}\) A similar phenomenon is evident in rural parts of the United States, where traditional gender roles tend to be more entrenched,\(^\text{357}\) and women may be more reluctant to invoke the authority of law.\(^\text{358}\)

\(^\text{355}\) Id. at 216.

\(^\text{356}\) Id. at 128; see also South Africa, supra note 162, at 96 (noting that most groups holding land in common are led by men, and “[e]ven where women are assertive enough to participate in discussions, their views are often not reflected,” despite the fact that the Communal Property Act of 1996 prohibits sex-based discrimination in communal property ownership and in use of land).

\(^\text{357}\) Pruitt, supra note 29, at 351, 355–56.

Relative social and cultural stasis in rural parts of the developing world is very likely another reason that the power of tradition and customary law persists there more than in cities.\textsuperscript{359} In the U.S. context, scholars have theorized the reasons for rural stasis, concluding that rural communities are slow to alter their traditions and heritage because of the “types of relationships rural people form as a result of population size and density.”\textsuperscript{360} This density of acquaintance, particularly among relatively homogeneous populations, is conducive to greater consensus on norms and values. By contrast, population diversity in urban settings “fosters the generation and acceptance of new ideas.”\textsuperscript{361} Urban norms are therefore more likely to evolve because of the innovation generated by “organizationally and occupationally diverse people.”\textsuperscript{362} If factors similar to those in the rural United States have fostered cultural inertia in rural parts of the developing world, that inertia may be disrupted by changes associated with migration. I return to this point below.

Further, I have elsewhere theorized the intersection of gender and rurality, noting that both women and rural places are associated with the private sphere, where legal actors and institutions—and therefore law itself—are relatively absent.\textsuperscript{363} This intersection has the unfortunate consequence of providing two bases for excluding rural women from law’s purview: gender and geography. Catharine MacKinnon describes law’s situation or stance with respect to women’s lives as being “high up and a long way off.”\textsuperscript{364} This distance is aggravated—effectively multiplied—for women residing in rural places.

Because law is so distant or absent in rural parts of the developing world, women there may not know that national law—let alone an international convention—confers on them particular rights and entitlements. They may be unaware of authorities other than those that are strictly lo-

\textsuperscript{359} An example of this may be seen in China. A recent New York Times article reported that Chinese parents living in cities expressed happiness about having a daughter but no son, while many rural parents continue to “cherish” boys. Andrew Jacobs, \textit{Chinese Hunger for Sons Fuels Boys’ Abductions}, N.Y. Times, Apr. 4, 2009, at A1. The rural preference for boys “is reinforced by a modern [economic] reality: without a real social safety net in China, many parents fear they will be left to fend for themselves in old age.” \textit{Id.} They prefer sons, who will be able to care for them as they age, whereas daughters live with their husbands’ families and provide no support to their own parents. \textit{Id.} The story suggests that the gender alignment of parental support practices is less rigid in urban areas, making male children less important there.

\textsuperscript{360} Pruitt, \textit{supra} note 29, at 354.

\textsuperscript{361} \textit{Id.} at 354–55 (citing Fern K. Willits et al., \textit{Persistence of Rural-Urban Difference, in Rural Society in the U.S.: Issues for the 1980s} 70, 73–74 (Don A. Dillman & Daryl J. Hobbs, eds., 1982)).

\textsuperscript{362} Pruitt, \textit{supra} note 29, at 355 (quoting Fern K. Willits et al., \textit{supra} note 361, at 73–74).

\textsuperscript{363} Pruitt, \textit{supra} note 29, at 369–71.

cal. Indeed, rural women are not only less likely to be aware of rights that originate at higher scales (that is, national or international) they are also less likely to have access to mechanisms for enforcing them locally. They may be unable to get the attention of legal actors for purposes of initiating strategic litigation or other efforts at enforcement. Until rural women are educated about their rights and have access to legal actors and institutions by which they may enforce these rights, international law as reflected in CEDAW and complementary national laws may be irrelevant, or at least of limited influence.

Nevertheless, the CEDAW framework holds promise in terms of its aspirations and potential for rural women, in part because it accommodates decisionmaking and sources of authority at various scales. As an international treaty, CEDAW itself is law made at the highest scale—the global—and it further compels Member States to make national laws compliant with its mandate. But CEDAW’s Article 14 also envisages rural women’s engagement with quasi-legal actors at lower scales, in their local settings. In particular, the Article confers upon women rights such as involvement in development planning, access to credit, marketing facilities, and technology, and equal treatment in land reform.

Such multi-scalar activity in turn suggests legal pluralism. This activity implicates engagement with custom and other local sources of authority. When powerful gender biases are entrenched in custom, effective empowerment of women is likely to require “a shift in thinking, attitudes, and understanding” by everyone at the local or village level. As women agitate for the access and empowerment that CEDAW envisages, customary law, and informal norms will be renegotiated.

The FAO, IFAD, and the World Bank recognize that “customary biases” may prevent women from exercising land rights unless there is a concomitant shift in attitudes not only by local officials, but also by lay

365. This could change rapidly with the availability of technology such as cell phones and the internet. See Chris Nicholson, Bringing the Internet to Remote African Villages, N.Y. Times, Feb. 1, 2009, at B4 (discussing a Google-sponsored initiative to provide satellite-based internet access to remote African villages).

366. The Gender in Agriculture Sourcebook implicitly recognizes the lack of legal consciousness in rural areas by advocating programs that provide legal education and assistance and gender training. Sourcebook, supra note 3, at 130.

367. CEDAW, supra note 143, art. 2(a); see also Cusack and Cook, supra note 144, at 208–09.

368. This is consistent with Celestine Nyamu’s advocacy of “concrete engagement with the politics of culture [which] creates a much more productive challenge” to the local culture. Celestine Nyamu, How Should Human Rights and Development Respond to Cultural Legitimization of Gender Hierarchy in Developing Countries?, 41 Harv. Int’l L.J. 381, 410 (2000).

369. Sourcebook, supra note 3, at 130.
men and women. In the same vein, Celestine Nyamu cautions that abolishing custom "is not conducive to a positive dialogue that achieves a balance between gender equality and cultural identity," even though CEDAW’s strong abolitionist language is arguably an important reflection of the Convention’s aspirations. Nyamu advocates for “appropriat[ing] the openings . . . in local culture or religious traditions, while simultaneously working toward changing the larger social matrix,” an apparent reference to national norms and laws, among other forces. Similarly, the United Nations advocates “dialogue with elders and other enforcers of customs and traditions” in order to raise awareness and identify ways in which custom may be harmonized with national and international norms that respect women’s rights. These strategies recognize that custom is not always “static, unchanging or incapable of gender responsiveness.”

Indeed, as suggested above, migration can be an aspect of rural women’s empowerment because it creates just the sort of “openings” in local culture that represent opportunities for change. Population churn between rural and urban places has the consequence of bringing the broader knowledge base associated with cities to rural places. Migration can become a tool for educating rural populations regarding national norms, even international ones. This may be similar to what happens in the United States as a consequence of rural gentrification and other varieties of population churn that bring new residents to traditional rural locales. These newcomers often bring social and economic change with them. Their differing expectations and knowledge can result in greater well-being for the entire community.

370. Id.; see also, UN-HABITAT, supra note 208, § 4.2 (suggesting the need to increase awareness of women’s rights among land professionals, policy makers, judges, and magistrates, in order to ensure equal interpretation and implementation of national laws).
371. Nyamu, supra note 368, at 416.
372. Id. at 417.
373. UN-HABITAT, supra note 208, § 4.3.
374. Id.; see also Madhavi Sunder, Piercing the Veil, 112 Yale L.J. 1399 (2003); Madhavi Sunder, Cultural Dissent, 54 Stan. L. Rev. 495 (2001) (asserting the significance of the right to participate in norm creation). Change in rural places in the developing world might be analogized to what has happened in rural parts of the United States that have undergone economic restructuring and decline in recent decades. Gendered divisions of labor have proven most malleable during economic restructuring in the United States because of women’s entry into the paid work force. See Pruitt, supra note 29, at notes 12-16, 246-288.
grants’ knowledge of national and international norms can be a catalyst for local change in rural parts of the developing world. Those migrants’ urban contacts can also link rural residents to formal legal actors and processes.

Other aspects of migration also hold potential for empowering rural women. These include the opportunity for women to become heads of their households and the concomitant opportunity to decide how remittance funds should be spent. As noted in Part I.D, studies suggest that when women receive remittances, they are more likely than men to invest them in human capital, infrastructure, or agricultural inputs. In short, money flows associated with migration may represent opportunities for women to renegotiate long-standing power structures and gain greater rights, freedoms, and economic empowerment. Norm creation associated with CEDAW can be a component of that opportunity.

Securing and enforcing Article 14 rights may be more challenging in rural contexts because of the strength of custom, ignorance of national and international laws, and absence of formal legal actors. Nevertheless, both public and private development institutions may play a role in empowering women in ways envisaged by Article 14. Any meaningful effort to improve rural women’s lives implicates not only law but also resources; international and national non-governmental organizations are important sources of these.

Again, one helpful aspect of CEDAW’s framework is that it proposes getting resources into the hands of rural women right where they are. This, in turn, implicates not only local officials but also the stances and priorities of rural development organizations. Such development agencies might constructively and strategically make material assistance contingent on the inclusion of women “at all levels” and stages of development planning. Alternatively, these organizations could monitor the ways in which recipients facilitate women’s access to the types of resources for which CEDAW recognizes their need. Such leveraging of material assistance to promote the interests of women seems

376. Rural Women, supra note 11, at 22. Men, on the other hand, are more likely to spend remittance funds on consumer goods. Id; see also New Perspectives, supra note 11, at 12–13 (noting that women tend to invest in housing improvements, health, welfare, and agricultural investments such as cattle and fertilizer); supra note 64 and accompanying text.

377. See CEDAW, supra note 143, at 14(2)(a),(c) and (g); see also supra notes 368–374 and accompanying text.

378. Susan Williams, Equality, Representation and Challenge to Hierarchy, in Constituting Equality: Gender Equality and Comparative Constitutional Law ch. 29 (forthcoming 2009) (advocating that state accommodation of minority communities’ practices should be contingent on dialogue within the community that disrupts and challenges the community’s norms).
particularly to challenge patriarchal custom and provide an excellent opportunity to empower rural women.\textsuperscript{379}

The reports of the four Member States discussed in Part III.B suggest that material resources are reaching rural women, at least in some instances.\textsuperscript{380} Another example of a state intervention of the sort presumably envisaged by CEDAW’s Article 14 comes from an IFAD report.\textsuperscript{381} The report regards a Chinese program that involved a multiscalar response to a rural problem.\textsuperscript{382} When out-migration of men from drought-stricken regions of northern China left women responsible for agricultural production, China used IFAD funding to institute a multipart strategy to increase women’s participation in decisionmaking.\textsuperscript{383} Women received literacy and skills training, access to credit, and extension services provided by a staff, half of whom is women.\textsuperscript{384} These services, along with the “institutional approach of participatory village development plans,” reportedly instilled “greater awareness and assertiveness among women in all matters relating to the social and economic situation of the individual, the household and the community.”\textsuperscript{385}

Finally, CEDAW’s Article 14 stands to empower rural women in ways not directly related to agricultural or other rural development. Higher birth rates among rural women in the developing world raise concerns about the sustainability of rural livelihoods.\textsuperscript{386} Indeed, such high birth rates are one of the forces driving migration to cities,\textsuperscript{387} and they are a basis for arguing that urban living is more ecologically sustainable and otherwise preferable. But CEDAW’s Article 14(2)(b) specifically requires that Member States provide rural women with access to “information, counseling and services in family planning,” in addition to more generally requiring “adequate health care facilities.”\textsuperscript{388} To the extent that CEDAW effectively fosters women’s education, their engagement in development decisionmaking, and their economic empowerment, it also leads to lower birth rates. This is because “female education . . . [and] participation in the labour force” have proven to be

\textsuperscript{379} Id.
\textsuperscript{380} See supra Parts III.B(1)–(4) (discussing programs that provide access to credit, support SHGs/cooperatives, and initiate greater gender equity in land reform).

\textsuperscript{387} See supra notes 25–28 and accompanying text.
\textsuperscript{388} CEDAW, supra note 143, art. 14(2)(b).
significant factors in lowering birth rates. In addition to greater economic and social independence for women, “an increase in female age at first marriage [and] improved knowledge of health, hygiene, and contraceptive methods” are effective forms of population control. CEDAW thus plays multiple roles in achieving these outcomes because it calls for adequate attention and resources to be provided for family planning, as well as for rural women’s economic empowerment. With respect to the goals of curbing rural birth rates and thus fostering ecological sustainability, the renegotiation of cultural norms that is facilitated by migration and population churn may again play a supporting role to CEDAW and the programmatic and development efforts that respond to its mandates.

To the extent that law does—or can—matter for rural women, a multi-scalar or pluralist approach is likely to be most successful in endowing them with both rights and resources. Forces that undermine women’s agency must be tackled not only in international instruments and national legislation that respond to its directives but must also be renegotiated at the grassroots level. Nowhere, perhaps, is this more true than in rural communities, where custom and local sources of authority tend to be particularly entrenched. CEDAW provides an especially appropriate framework for this negotiation by addressing not only structural issues (for example, lack of schools and reproductive services), but also by endorsing women’s inclusion in rural development in ways that respect and use local know how and preferences.

V. Postscript: Resisting the Urban Juggernaut?

Current migration trends make the urban juggernaut appear unstoppable. Perhaps urbanization of the developing world, on the scale and in the manner evident in the developed world, is inevitable. But is urbanization best? Will it bring the greatest benefit for women, men, and children? Will it save the environment or doom it? Should we hop on the “global cities” bandwagon with nary a look back?

389. Jazairy et al., supra note 21, at 78; see also Rural Women, supra note 11, at 26 (noting that educating girls reduces fertility rates and is “one of the most effective ways of reducing poverty”).

390. Jazairy et al., supra note 21, at 78. This is supported by data from the United States, where differences in rural and urban birth rates are now extremely similar. See Don E. Albrecht & Carolyn M. Albrecht, Metro/Nonmetro Residence, Nonmarital Conception, and Conception Outcomes, 69 RURAL SOC. 430, 435 (2004).

391. See supra notes 9–25 and accompanying text.

This Essay has raised issues that call into question the wisdom of the urban juggernaut. It thus challenges the orthodoxy that urban is better and that urbanization is the solution to ills of the developing world. At a minimum, greater clarity is needed regarding development goals vis-à-vis the rural remnant, as well as law’s role in achieving those goals.

The first step toward achieving greater clarity is to be cognizant of rural people and places and how they differ from what has become an implicit urban norm. The United Nations and other global bodies are clearly aware of these differences. Given that half of the world’s population lives in rural areas and more than ninety percent of the world’s rural residents are concentrated in less developed countries, it is not surprising that rural populations garner more attention from global policy makers than they do, for example, from U.S. domestic policy makers. Sheer numbers still count for something. This heightened awareness of rural difference is probably also attributable to a sense that differences between rural and urban are much greater in the developing world than in more developed nations.

Indeed, in these days of worldwide economic constriction and consequent reverse migration to the countryside, rural populations arguably matter—at least they should—more than ever. It is thus not surprising that the international strategies now in place for assisting rural populations, including CEDAW’s special attention to rural women, are in some ways comprehensive and well-considered.

As in the developed world, however, the focus of the development community’s elite decision makers is increasingly on cities, and the bias is increasingly an urban one. According to a recent study by the Global Secretariat of the Global Donor Platform for Rural Development, a burgeoning “urban influence on policy makers has shifted the focus of development policy aims away from rural income generation and rural poverty reduction.”

393. See supra notes 7, 12 and accompanying text.
394. See Porter, supra note 5; Pruitt, supra note 5 (arguing that judges are often oblivious to rural difference); Pruitt, supra note 358 (arguing that law and policy makers are often ignorant of rural difference, or simply ignore it); Lisa R. Pruitt, The Forgotten Fifth: Rural Youth and Substance Abuse, 20 Stan. L. & Pol’y Rev. 359 (2009).
395. Recent news coverage suggests that the Chinese government is attending to rural concerns more in recent months because economic collapse is driving the country’s “floating population” back to rural places. See Bradsher, supra note 87 (reporting government subsidies for workers willing to go to rural areas, including a waiver of fees for starting small businesses, free vocational classes, and subsidized school fees); Andrew Jacobs, China Fears Rural Tremors as Migrants Flock from Coast, N.Y. Times, Feb. 22, 2009, at A5 (reporting new crop subsidies and an expansion of rural health care).
396. See supra Part II.C.1.
Yet experience tells us that urbanization does not necessarily reduce poverty. Between 1993 and 2002, the “$1 a day” poverty rate declined from 27.8% to 22.3%. By this measure, the number of poor fell by about 106 million people, representing a decline of 153 million in the number of rural poor but an increase of forty-seven million in the number of urban poor.\(^{398}\) These figures suggest that many of the rural poor who migrate to cities simply become urban poor. The power of urbanization to lift people out of poverty is limited. Indeed, the donor-sponsored study noted above reached a consistent conclusion:

Countries with falling poverty levels today are most likely countries that have invested a lot in their rural areas in the past. The reduction of poverty is an achievement that owes a great deal to increased incomes from agriculture . . . . Indeed, very few countries achieved broad-based economic growth without agricultural or rural growth preceding or accompanying it. Experience also shows that, while urban poverty is growing fast and matters enormously, fighting poverty today means first of all combating rural poverty—by transforming rural lives and livelihoods. Such a strategy would also have positive impacts on urban poverty and forced out-migration, which are often direct consequences of the lack of rural opportunities.\(^{399}\)

As this passage suggests, rural development need not entail, ultimately, more urbanization. Certainly, urbanization should not be the only prong of a rural development strategy. As noted earlier, the agricultural sector can provide an economic safety net of sorts because of its resilience during downturns.\(^{400}\)

To the extent that agricultural and rural development represents a shift to intensive production agriculture,\(^{401}\) however, such development

\(^{398}\) Martin Ravallion et al., *New Evidence on the Urbanization of Global Poverty* 14 (World Bank, Policy Research Working Paper No. 4199, 2007). Similarly, the total number of people living under $2 a day in rural areas fell by 117 million, while the number of urban poor rose 63 million for a net drop of only 54 million. *Id.* “[T]he urban share of the poor rose . . . and [the] ratio of urban poverty to total poverty incidence has risen with urbanization . . . . We find that the urban share of the ‘$1 a day’ poor is rising at about 0.6% points per year over 1993–2002.” *Id.* at 16. But see Stephen J. Dubner, *How Should We Be Thinking About Urbanization? A Freakonomics Quorum*, N.Y. Times Blogs, Dec. 11, 2007, http://freakonomics.blogs.nytimes.com/2007/12/11/how-should-we-be-thinking-about-urbanization-a-freakonomics-quorum/ (last visited June 21, 2009) (including the comments of Edward Glaeser, who asserts that “[c]ities are full of poor people because cities attract poor people, not because cities make people poor.”).

\(^{399}\) Wolz, *supra* note 101, at 5.

\(^{400}\) See *supra* Part II.C.

\(^{401}\) See *supra* note 133 and accompanying text. This is the sort of development that Jeffrey Sachs proposes. Sachs, *supra* note 21, at 219–20, 230–31.
may ultimately result in the same problems that the developed world is now confronting in terms of its relationship to food, agriculture, and sustainability. The agricultural development proposals touted by Jeffrey Sachs, for example, may not adequately attend to the environmental consequences of intensive production agriculture.\(^{402}\) We should consider the extent to which the current path of international agriculture and rural development efforts is the same path from which the developed world is now, in some measure, retreating.\(^{403}\)

Other questions, in turn, are implicated: How, for example, can human rights and development law inform development strategies that both respect and reflect rural livelihoods, while also producing enough food to feed the world?\(^{404}\) How can law play a role in ensuring that rural development efforts are ecologically sustainable?\(^{405}\) What is the “right” global balance between rural and urban?

Recent studies indicate that the carbon footprint of city dwellers in the developed world is smaller than that of their rural counterparts,\(^{406}\) but the same is not necessarily so in the developing world. The United Nations similarly recognizes that cities are sometimes more ecologically sustainable than rural livelihoods (especially in the developed world), but it also notes that urban growth and sprawl can be environmentally damaging.\(^{407}\) Acknowledging the complexity of the matter, a 2007 publi-

---

403. See Michael Pollan, The Omnivore’s Dilemma (2006); Wes Jackson & Wendell Berry, A 50-Year Farm Bill, N.Y. Times, Jan. 5, 2009, at A21; Andrew Martin, Is a Food Revolution Now in Season?, N.Y. Times, Mar. 22, 2009, at BU1; Michael Pollan, Farmer In Chief, 63 N.Y. Times Mag., Oct. 12, 2008, at MM62. The debate over our future in relation to urbanization is reflected in Dubner, supra note 398 (comparing comments of James Howard Kunstler, who predicts an end to the cycle of people moving from farms and small towns to big cities, with those of Alan Berube, who touts cities as solutions to many ills, asserting that “urbanization makes us more productive and . . . wealthier”).

404. While sufficient food is produced to feed the world’s twelve billion people, hunger remains a significant problem in developing countries. Food insecurity and malnutrition are expected to persist and increase. See World Bank Task Force, supra note 98, at 1 (citing IFPRI 2001). Growth in the world population, which is expected to reach 9.3 billion by 2050, will put greater pressure on food production. Id.

405. See Gonzalez, supra note 34, at 431–32 (defining ecological sustainability).

cation of the U.N. Population Fund on Urbanization and Sustainability asks provocatively: “Cities: Burden or Blessing?”

Until we are clearer on the answer to that question—and the related question of how we can effectively manage the environmental burden of urbanization in the developing world—capitulating to the urban juggernaut (let alone encouraging it) may not be the wisest course. One path of resistance is to re-think the assumption that rural development necessitates urbanization. Rural development might just as well entail respect for rural livelihoods and empowerment of people within their rural settings. The aspirations of CEDAW’s Article 14 can be a key component of such empowerment and, indeed, provide a blueprint for it.

---

408. Urbanization and Sustainability, supra note 407. The report states: “Right now, cities draw together many of Earth’s major environmental problems: population growth, pollution, resource degradation and waste generation. Paradoxically, cities also hold our best chance for sustainable future.” Id. at 1. The report goes on to explain that while cities are associated with “unsustainable patterns of production and consumption [they] offer better chances for long-term sustainability.” Id. at 1–2. The report continues: “[N]ot only do dense settlements have greater capacity than rural areas to absorb large populations sustainably, but urbanization is a powerful factor in fertility decline.” Id. at 2. But see supra note 389-390 and accompanying text (suggesting factors other than urbanicity that contribute to fertility decline).

In addition, current priorities and systems cause environmental damage. These practices include importing produce instead of consuming that which is grown domestically because poor internal transport options make the former less expensive. See Wolz, supra note 101, at 10.

409. See supra note 134 and accompanying text.
