Environmental Conditions that Foster Collaboration

What features do successful collaborative projects have in common? The researchers selectively surveyed North American collaborative projects and found that some commonalities were present in more successful projects. These included:

- They have strong support from the top or from strong local advocates.
- They have pressing economic reasons to collaborate.
- They are geographically proximate, or they at least have good delivery systems.
- They have experience creating memoranda of understanding and other workflow agreements.
- They exhibit similar work cultures and collections.
- They have experience cooperating with each other.
- They hire a consultant and utilize good project planning and management practices.
- They utilize grant money to provide structure, accountability, and cash.
- They manage communications and staff buy-in well.
- They have a shared back end on their library automation system.
- They plan a collaboration that is manageable in size.
- They neutralize territoriality, particularly for already-existing workflows.
- They trust each other.

The conditions identified as fostering collaboration did not all appear to be present in each successful project, but some mix of them did, and successful projects exhibited a synergistic balance.
