Securing Next Generation Communication Systems
Mounia Bouabdellah and Dr. Naima Kaabouch

Introduction
Next generation of wireless communication systems will be smart, able to sense free frequency channels, and dynamically adjust their communication parameters according to the environment.

Problem Statement
The objective of this research is to develop detection and countermeasure techniques to secure the next generation of wireless communication systems.

Goal and Objectives
The objective of this research is to develop detection and countermeasure techniques to secure the next generation of wireless communication systems.

Detection and Protection Techniques
Locate and identify malicious activities in the network by examining in real time network traffic.
