Public Confidence in Government: Public Service Motivation and Political Ideology

Diana Bernal, Stephanie Bixler, Nurgul R. Aitalieva
Department of Public Policy, Indiana University – Purdue University, Fort Wayne, IN 46805

I. Background

Confidence in the executive branch of the federal government

- Confidence in government has declined from 28% to 12% over the last 12 years (Fig. 1).
- According to the 2014 General Social Survey (GSS), 44% Americans have “hardly any confidence,” 44% have “only some confidence,” and 12% have “a great deal of confidence” in the Executive Branch of Government (Fig. 2).

Lack of trust

- Leads to excessive micromanagement and excessive dependence on rules.
- Hinders informal relationships.
- Flexibility and discretion become clearly constrained.

II. Research Question and Hypotheses

Research question

- What explains public confidence in the executive branch of the federal government?

Hypotheses

H1: Government employees have more confidence in the executive branch of the government than their counterparts in the private sector.

H2: Democrats have more confidence in the executive branch of the government than Republicans or Independents.

III. Data and Research Methods

Data source

- The General Social Survey (GSS), 2014.

Dependent variable

- As far as the people running the Executive Branch of the Federal Government are concerned, would you say you have
  1. Hardly any confidence,
  2. Only some confidence, or
  3. A great deal of confidence in them?

Key independent variables

- Government employees (Fig. 3).
- Democrats (Fig. 4).

Methods

- Cross-tabulation.
- Ordinal logistic regression.

IV. Results

Note: Cell entries are unstandardized parameter estimates. Statistical tests of parameter estimates computed using robust standard errors.

V. Conclusion and Implication

- Government employees are more likely to express confidence in executive branch leaders. In other words, government employees support the very institutions they work for.
- Democrats are more likely to express confidence in executive branch leaders given that the White House was controlled by the Democratic Party in 2014.
- This study shows that executive leaders are seen as partisan leaders who have strong influence on forming attitudes toward government.

VI. Future Research

- Analyze confidence in other branches of government, i.e. Congress and the U.S. Supreme Court.
