INHERITING INEQUALITY:

WEALTH, RACE,
AND THE LAWS OF SUCCESSION

Palma Joy Strand*

Rules of inheritance and succession are, in a way, the genetic code of a society. They guarantee that the next generation will, more or less, have the same structure as the one that preceded it.

Lawrence Friedman¹

Today’s most serious racial injustices...are a legacy of past racism...the biggest racial problem facing the country isn’t discrimination, but rather the deep inequality that has created almost two different Americas...

Richard Thompson Ford²

* Associate Professor of Law, Creighton Law School. B.S. Stanford University (1978); J.D. Stanford University (1984); LL. M. Georgetown University Law Center (2006). I am indebted to Kate Mahern, Ron Volkmer, Justin Hansford, Shelly Kreiczer-Levy, and Heather Way for their comments. Patrick McCann, Nicole Herbers, and Jeremy Roose provided valuable research assistance. Finally, I very much appreciate the financial support provided by a Creighton Law School summer research fellowship.

      Destructive Effects of Intestacy
Since first reading the Friedman quote above, I have carried with me an image of a legal double helix through which our society replicates itself generation after generation according to the encoded instructions of the law of succession and inheritance. Though mutations and evolution occur, essential patterns remain over time. Further, while the patterns of society emerge from law, law in turn emerges from social norms.

In Friedman’s recent book, Dead Hands: A Social History of Wills, Trusts, and Inheritance Law, he tracks specific trends in inheritance law that reflect changed social norms. He identifies shifts in law and social norms that accommodate nontraditional families and a shift from the “bloodline family” to the “family of affection and dependence”; movement away from formal wills and toward will substitutes; and changing attitudes toward wealth and the wealthy. Friedman also notes, but does not discuss, significant demographic changes due to people living longer and the increasing importance of lifetime transfers of wealth for big-ticket items such as college and down payments on homes.

Of course, the social structure that is most directly affected by the law of inheritance—which determines who gets people’s property when they die—is the distribution of property, of wealth. This Friedman does not

---

3 See note 1 supra.
4 “Laws of inheritance reflect … the social background and the social structure. They are the product of society. But they also perform a function for society. These laws and rules help define, maintain, and strengthen the social and economic structure.” Friedman, supra note 1, at 14. See also Palma Joy Strand, Law as Story: A Civic Concept of Law (With Constitutional Illustrations), 18 So.Cal. Interdisc. L.J. 603, 611-615 (2009) (describing cycle by which community experiences and stories lead to law, which in turn leads to social norms).

8 Id. at 14, 171-178.
discuss. But his metaphor prompted me to explore the effects of inheritance law on the distribution of wealth in the United States. This article is the result.

Following the thread of inheritance law, I started with current wealth inequality, which is currently at a level close to the 20th-century peak in the 1920’s. Further exploration led to the particularly acute wealth disparities between Black and White households as well as studies documenting the effect of inheritance in perpetuating those disparities. This is an issue of immediate urgency: The wave of racialized wealth owned by the parents of the baby boom generation is currently washing over the baby boomers in an enormous intergenerational transfer of wealth. Without intervention, the wealth distribution going forward will be at least as racially skewed as it is at present. Part I describes this initial part of my journey, including a summary of the relevant provisions of our current law of succession.

Confronting these racial wealth disparities, I considered both their effects and their source. As to their effects, current work links net worth to a host of outcomes including, perhaps most importantly, education—a key to success and upward mobility. As to their source, multiple observers trace them to the centuries-old race-based economic system that separated White “haves” and “could-haves” from Black “have-nots” and “could-never-haves.” Slavery and de jure segregation were the most evident legal aspects of this system, but others such as the Homestead Acts of the late 1800’s, the original exclusions from Social Security, and federal support for suburbanization and White-only neighborhoods after World War II were also significant. Part II discusses these dual perspectives on the

---

10 Friedman does refer to it in passing, FRIEDMAN, note 5 supra, at 14, 135, but he does not address it in any comprehensive way. Oddly, though Friedman devotes a large portion of the book to a discussion of topics that are relevant only to those with enormous wealth (dynastic and caretaker trusts and limits on perpetual trusts, charitable foundations, and estate taxes), he does not articulate a conclusion regarding the economic structure that underlies them other than to observe that institutions have formidable lobbying power, id., at 134, 182, and the public’s conversion to an anti-estate-tax view by the political campaign against the “death tax.” Id. at 176-177.

11 In this article, the racial terminology I use, except when quoting others, is Black and White. See BEVERLY DANIEL TATUM, WHY ARE ALL THE BLACK KIDS SITTING TOGETHER IN THE CAFETERIA? A PSYCHOLOGIST EXPLAINS THE DEVELOPMENT OF RACIAL IDENTITY 15-17 (Basic Books 1997).

13 See notes 18-76 infra and accompanying text.
Richard Thompson Ford has pointed to “deep inequality” rather than overt discrimination as the most significant racial problem today. The racial wealth disparities described in Part I and II constitute one facet of this problem. As with others, while inheritance law is facially race-neutral, individual decisions under inheritance law operating from a starting point of racially skewed wealth perpetuate deep racial wealth inequality. Ford and others have argued for measures that focus on class rather than race per se to address the floundering of traditional civil rights law in the face of such problems. Cross-racial civic organizing and legal initiatives that emphasize common economic interests and de-emphasize race by, paradoxically, explicitly acknowledging it as a potent social construct offer a path toward change. Part III traces the line of analysis from deep inequality to a systemic understanding of that inequality to the civic organizing and legal initiatives that can move the system.

I then head back to inheritance law, offering two ideas for changing how property passes from one generation to another at death. Both of these, while race-neutral proposals that would benefit all low-wealth individuals and households, would intentionally benefit Black individuals and households disproportionately due to their overrepresentation in the low-wealth ranks. Part IV highlights (1) a shift to a “windfall” tax on inheritances to change our social “story” about inheritance from one in which the decedent is entitled to dispose of “his” or “her” property to one that acknowledges the “Lady Luck” aspect of being born to a richer or poorer family; and (2) changes in intestacy law to provide clear title quickly and easily for inherited assets, especially homes in modest estates.

Finally, in the Conclusion I offer some thoughts on how the approach I take here, which reflects a systemic rather than an individualized understanding of racism and civil rights, meshes with other current views on the next steps in the long struggle to overcome our continuing legacy of slavery and race.

15 Text accompanying note 2 supra.
16 See notes 129-150 infra and accompanying text.
17 See notes 151-231 infra and accompanying text.
One of the groundings of our form of government is the absence of an aristocracy. In Britain, political power was passed down through inherited titles. The Constitution, in contrast, explicitly prohibited the granting of titles of nobility by the United States or any of the states individually.\footnote{“No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.” U.S. CONSTITUTION, Article I, Section 9, clause 8. “No State shall …grant any Title of Nobility.” Id., Article I, Section 10, clause 1.}

From the Founding, however, vast accumulations of wealth and the economic power that accompanies them have been not only allowed but encouraged by American acceptance of capitalism. Yet at the same time, the thread of a conviction runs through our history that concentrations of wealth—and in particular the creation of economic aristocracies by the inheritance of such wealth over generations—are in tension with and even counter to our democratic project. And so, for example, the estate tax has historically been justified in these terms more than in terms of revenue-raising.\footnote{FRIEDMAN, note 5 supra, at 172.}

Apart from the estate tax, however, little attention has been paid to the role of the law of inheritance in ensuring—or interfering with—politically acceptable levels of social mobility. The focus has been primarily on ensuring that the wealthiest citizens, the crème de la crème, do not found economic dynasties. What happens to the rest of us has been largely ignored. My interest is bringing Friedman’s insight into sharper focus with respect to this issue by developing a more fine-grained picture of the relationships between inheritance and the reproduction of our economic structure overall.

A. Wealth Inequality

I start with the distribution of wealth overall. While many people and much of the data on economic well-being have traditionally emphasized and continue to emphasize income, “family wealth is also a source of well-being, independent of the direct income it provides.”\footnote{EDWARD N. WOLFF, TOP HEAVY: THE INCREASING INEQUALITY OF WEALTH IN AMERICA AND WHAT CAN BE DONE ABOUT IT 5 (The New Press 2002).} Income, generally earned by or assigned to individuals, is the inflow of resources over a given time and is often offset to a large degree by outflows to cover expenses. Wealth, in contrast, represents accumulated assets and often accrues to
families. Wealth provides a level of security to families to meet income fluctuations or emergency needs: “Most assets can be sold for cash or used as collateral for loans, thus providing for unanticipated consumption needs. In times of economic stress, occasioned by such crises as unemployment, sickness, or family breakup, wealth is an important cushion.” Wealth also allows for family investment in the form of education or homeowneership.

Sociologist Seymour Spilerman observes that until recently, wealth was considered relevant only in relation to elites. He identifies three reasons why this began to change in the 1980’s: (a) an emergent appreciation of the contributions of family wealth—even modest financial resources—to living standards; (b) the rapid equity buildup in the American population since World War II; and (c) the growing availability of wealth data at the level of the family or household unit.

As to the first reason, Spilerman notes the ability of even modest levels of wealth to “cushion” families, particularly low-income families, from economic shocks such as illness or job loss. As to the second, he observes the general trend for the dispersion of wealth in the West over the 20th century, with even average families often holding home and pension equity. Finally, as to the third reason, after an initial survey of assets held in the 1960’s, consistent surveys have been conducted since the 1980’s.

Economic data and sociological analyses have in recent decades generated a more complete portrait of wealth distribution in the U.S. than was historically available. Several characteristics of this portrait are noteworthy. To start, wealth inequality in the U.S. is significantly greater than in the past.

---

22 WOLFF, note 20 supra, at 6.
23 Wealth and Stratification Processes, 26 ANNU. REV. SOCIO L. 497, 500 (2000). Spilerman also suggests a theoretical underpinning for the historical focus on income rather than wealth: theories of stratification that focused on individual merit and skill (functionalism) or role in the system of production (Marxian). Id. at 498.
24 Id., at 500.
25 Id.
26 Id. at 501, 504-510. Even though this overall trend toward greater wealth distribution reversed in the last decades of the century, the 2000 distribution of wealth in the U.S. still reflected meaningful levels of assets held by non-elites.
27 Id., at 501-502.
than income inequality. In 2004-2005, for example, the top 20% of the income distribution received 47.7% of total income but held 84.4% of total wealth.\(^{28}\) The bottom 20%, at that time, received 4.2% of total income and held 0% of total wealth.\(^{29}\)

In addition, wealth inequality has been increasing since the late 1970’s or early 1980’s. Economist Edward Wolff observes that “[a]fter the stock market crash of 1929, there ensued a gradual if somewhat erratic reduction in wealth inequality, which seems to have lasted until the late 1970’s. Since then, inequality of wealth holdings… has risen sharply.”\(^{30}\) If Social Security and other types of pension wealth are excluded (wealth that benefits the holder but is generally extinguished at death and is thus not inheritable), wealth inequality in 1998 approached wealth inequality in the 1920’s.\(^{31}\)

Finally, wealth inequality in the U.S. is substantially greater than in most developed countries.\(^{32}\) This wealth inequality echoes U.S. income inequality, which also exceeds that of other comparable countries.\(^{33}\)

Looking even more closely at the wealth distribution portrait reveals additional details relating to the composition of household wealth. While owner-occupied housing is consistently the most important household asset,\(^{34}\) for American households overall it accounts for only about a quarter to a third of family net worth. But for the three middle quintiles of Americans—those who lie between the top 20% and the bottom 20% in wealth—the principal residence is between one-half and two-thirds of total net worth.\(^{35}\) Not surprisingly given their overall greater wealth, the

\(^{29}\) Id. In terms of the wealth distribution, 1995 data indicated that the top 1 percent held 11.6% and the top 10 percent held 47.3% of total net worth—almost half the net worth of the nation overall. MELVIN OLIVER & THOMAS SHAPIRO, BLACK WEALTH/WHITE WEALTH: A NEW PERSPECTIVE ON RACIAL INEQUALITY 69 (Routledge 1995).

\(^{30}\) WOLFF, note 20 supra, at 8.

\(^{31}\) Id. at 9. Though these forms of non-inheritable wealth are of the utmost importance to particular individuals during their lifetimes, they are less relevant in terms of the reproduction of social structure issues of interest here.

\(^{32}\) Id. at 31-36.

\(^{34}\) WOLFF, note 20 supra, at 22; Haskins, note 21 supra, at 50 (“a bigger share of families own their home than any other asset”).

\(^{35}\) WOLFF, note 20 supra, at 25 (59.8% in 1998).
principal household residence is a significantly lower proportion of total wealth to those at the top of the wealth distribution: 7.8% for the top 1 percent and 28.8% for the next 19 percent.\textsuperscript{36}

The interlocking pieces of the composition-of-assets puzzle can also be seen by noting the financial assets that comprise the majority of the wealth of those at the top of the distribution:

Another way to portray differences between middle-class households and the rich is to compute the share of total assets of different types held by each group... In 1998 the richest one percent of households held half of all outstanding stock, financial securities, and trust equity, two-thirds of business equity, and 36 percent of investment real estate. The top 10 percent of families as a group accounted for about 90 percent of stock shares, bonds, trusts, and business equity, and about three-quarters of nonhome real estate.\textsuperscript{37} What we see, then, are housing and retirement assets within the reach of most Americans. Financial assets, however, are heavily concentrated in those at the top, while those at the bottom of the income distribution hold essentially no wealth at all.

B. Racial Wealth Disparities

The skewed distribution of wealth described in the previous section, in and of itself, has elicited acute concern in terms of its effect on the operation of our democracy. Inequality hurts both direct political participation\textsuperscript{38} and the civic involvement that grounds the exercise of citizenship.\textsuperscript{39} More generally, having an economic stake in one’s society has been asserted to correlate to having a stake in the society overall.\textsuperscript{40}

But a final aspect of the wealth distribution portrait clamors for attention: The portrait is painted in black and white. Not only is wealth inequality in general relatively high and on the rise in the U.S., racial trends

\begin{itemize}
  \item \textsuperscript{36} Id.
  \item \textsuperscript{37} Id. at 24, 27.
  \item \textsuperscript{38} Miles Rapoport & David A. Smith, Democracy First, in INEQUALITY MATTERS, note 28 supra, at 268.

  \item \textsuperscript{40} See, e.g., Michael Lind, The Smallholder Society, 1 HARV. L. & POLICY REV. 143 (2007).
\end{itemize}
in wealth inequality are stark. In 1995, Melvin Oliver & Thomas Shapiro used data from the 1980’s\textsuperscript{41} to reveal enormous disparities in racial wealth overall as well as more textured differences relevant to family economic resilience. They showed, for example, that while the ratio of Black median \textit{income} to White median income was 0.62 ($15,630 to $25,384), the ratio of Black median \textit{net worth} to White median net worth was 0.08 ($3,700 to $43,800).\textsuperscript{42} Even more dramatic, the ratio of Black median \textit{net financial worth} to White median net financial worth was 0.00 ($0 to $6,999).\textsuperscript{43}

Probing more deeply, Oliver & Shapiro found that 65.6\% of White compared to 41.6\% of Black households had home equity, and of those households the median value of the asset was $45,000 for Whites and $31,000 for Blacks.\textsuperscript{44} At the same time, for Black households, which overall hold less net financial worth than White households, home equity represented 62.5\% of assets overall compared to 43.3\% for White households.\textsuperscript{45} Oliver & Shapiro identified “three key points at which institutional and policy discrimination often intervenes to restrict blacks’ access to housing and to inhibit the accumulation of housing wealth:”\textsuperscript{46} (1) lesser access to credit; (2) higher interest rates attached to loans for buying homes; and (3) the lesser appreciation of housing values in “Black” as versus “White” neighborhoods.\textsuperscript{47} The last in particular stems from historical federal practices (especially housing, tax, and transportation) that enforced residential segregation and continuing patterns of extremely high racial housing separation.\textsuperscript{48} Oliver & Shapiro estimated the cumulative wealth implications of these three effects of past and present housing discrimination to be substantial.\textsuperscript{49}

\textsuperscript{41} Oliver & Shapiro, note 29 supra, at 55.
\textsuperscript{42} Id., at 86.
\textsuperscript{43} Id. See also Spilerman, note 23 supra, at 508; Wolff, note 20 supra, at 19-21.
\textsuperscript{44} There is, moreover, evidence indicating that the racial wealth gap has widened over the past two decades—at least in absolute terms. See Thomas M. Shapiro, Tatjana Meschede, & Laura Sullivan, “The Racial Wealth Gap Increases Fourfold,” \textit{Research and Policy Brief of the Institute on Assets and Social Policy (IASP), Brandeis University} (May 2010) (available at iasp.brandeis.edu/pdfs.Racial-Wealth-Gap-Brief.pdf) (from $20,000 to $95,000 differential in median net worth exclusive of home equity, 1984-2007).

\textsuperscript{46} Id.
\textsuperscript{47} Id., at 137-151.
\textsuperscript{48} Id., at 136-137.
\textsuperscript{49} Among the current generation of black homeowners, to the $10.5 billion paid to banks in extra interest, one must add another $58 billion in lost home equity. Finally, if black home mortgage approval rates were the same as those of similarly qualified whites, 8 percent of the blacks who
Ten years later, Oliver & Shapiro issued an update of their 1995 work. Using data up to 2002, they found that “the overall racial wealth gap persists at a dime on the dollar, and the dollar amount of the racial wealth gap grew.” Surveying the overall landscape, Oliver & Shapiro identified several important developments relating to the asset gap. These include the reliance of Black families on credit card debt, the magnified importance of home equity as it was increasingly used to cover such debt and living expenses; the higher effects of the subprime mortgage market on Black versus White home-buyers (30% versus 10%); changes in bankruptcy law that disadvantage families, such as Black families, that have greater health problems and medical costs (the greatest cause of individual bankruptcies); and high incarceration rates of Black men, which ensures that a significant proportion of Blacks will be handicapped in lifetime wealth accumulation.

Wolff’s 2002 analysis reveals an additional important characteristic of the racial wealth gap: The Black-White gap in median wealth is greater than the gap in mean wealth. “This result reflects a greater inequality in wealth among blacks than whites.” More than one in four African-American households now have no positive wealth at all, in contrast to one in seven white households. These data reveal a divide between a Black middle class with net worth in the form of home equity (though depressed due to lingering effects of past discriminatory practices) but with little net financial worth and a Black poorer class with little wealth in any form.

are annually denied mortgages would be homeowners today…. [D]iscrimination in housing markets costs the current generation of blacks about $82 billion. If these biases continue, it will cost the next generation of black homeowners $93 billion. Id. at 150-151.

50 MELVIN OLIVER & THOMAS SHAPIRO, BLACK WEALTH/WHITE WEALTH: A NEW PERSPECTIVE ON RACIAL INEQUALITY 204 (Routledge 2006) (from $60,980 in 1988 to $82,663 in 2002). See also WOLFF, note 20 supra, at 21 (The home ownership rate for Blacks doubled from 24 to 44 percent between 1940 and 1980—a time when federally prescribed lending practices led to lower values for homes in non-White neighborhoods. It has, however, remained at essentially that level since, which means that Black home values and net worth continue to reflect a racially segregated market.).

whatever.

C. The Role of Inheritance in Wealth Inequalities

Awareness of the importance of household wealth as well as individual income as an indicator of economic well-being and social status has grown over the past twenty years. Along with this awareness has grown interest in the sources of wealth and particularly the degree to which wealth is inherited or otherwise transferred intergenerationally. Though the inheritance of wealth is one likely factor, other causes of observed trends are possible and, indeed, likely. For example, tax and economic policies set in place in the 1980’s are widely assigned a role in the trend of increasing inequality over the past three decades. My focus, however, is on the role of inheritance.

The U.S. law of succession consists of basic freedom of testation by execution of a will, along with default intestacy laws that generally designate spouses and/or children and/or descendants as heirs. Under this traditional regime, a decedent’s property is not transferred automatically, and initiation of a probate process is necessary for the official transfer of title. This is still true, with a few exceptions, for intestate estates and real property not held in joint tenancy. Privatized estate mechanisms such as life insurance, POD and TOD accounts, and revocable or living trusts as will substitutes, however, have more recently rendered probate unnecessary in many instances—but only where a decedent takes affirmative action to employ those substitutes. For a few wealthy decedents, taxes claim a portion of the estate for the public coffers, but historically the numbers to whom this applies are small—on the order of 1%.

Nowhere do these laws speak of the intergenerational replication of advantage or privilege. Sociologists Stephen McNamee and Robert Miller observe that

the inheritance rules apply equally to all, regardless of

59 FRIEDMAN, note 5 supra, at 18-19.
60 Id., at 9-10; JESSE DUKEMINIER, ROBERT SITKOFF, & JAMES LINDGREN, WILLS, TRUSTS, AND ESTATES 47 (8th ed.) (Aspen Publ. 2009).
62 FRIEDMAN, note 1 supra, at 172, 176-177 (in 1987 only 0.88% of all estates had to file a return; in 2002 only 1.17% of decedents had taxable estates).
privilege. But, like laws defining and protecting property, rules of inheritance differentially benefit the privileged and not the vast majority who stand to inherit little or nothing. Inheritance systems are a major mechanism for the intergenerational transmission of privilege and, as such, constitute a central component of systems of stratification.

Anatole France’s famous axiom makes a similar point: “The law, in its majestic equality, forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread.” But the operation of the laws of succession is more subtle than that of the law France describes. In his example, the law operates directly on poor (and rich) alike. With inheritance and wealth inequality, in contrast, the law merely creates a framework within which individual choices are made, and it is from these choices—operating from an initial wealth distribution—that the pattern of continuing wealth inequality emerges.

Individuals, that is, tend to choose to pass their wealth to succeeding generations of their own families because of strong cultural norms that lead to these decisions in people’s estate plans. When people do not exercise their right to choose, default intestacy laws make similar presumptions on their behalf. The result of these individual decisions and individualized applications of intestacy law is for the children of wealthy parents to benefit from inheritances from their parents. Children of parents with few or no wealth inherit little or nothing. Wealth travels down the generations within families, and, as Friedman suggests, the social structure reproduces itself.

Studies on the intergenerational transmission of wealth confirm this phenomenon, though quantifying its magnitude has proven challenging. After all, inheritance is not the sole source of wealth: Lifetime earnings and savings as well as inter vivos intergenerational gifts can also be significant contributors. Various studies approach the issue using different

---

64 THE RED LILY (1894) (ch. 7).
65 Not all inheritances pass to decedents’ children or descendants. In fact, some evidence suggests increasing trends toward a general preference for spouses as beneficiaries than was the case traditionally, see FRIEDMAN, note 5 supra, at 12, though some of this wealth is likely to reach the next generation eventually. Nevertheless, “there are strong cultural expectations in the United States for wealth to remain in the immediate family through bequests to spouses and children even though such transfers seemingly contradict the dominant ideology of meritocracy.” McNamee & Miller, note 63 supra, at 14.
methodologies and focus on wealth at different points in the life cycle, which leads to varying estimates given that older people are more likely to have received an inheritance than younger people. The range of estimates is wide—from 20% at the low end to 80% at the high end of total aggregate wealth attributable to inheritance.\textsuperscript{66} Such a figure reaffirms that inheritance law, while not cloning the social structure precisely, nonetheless molds a reasonable facsimile in the next generation.

Studies have also examined the effect of inheritances on wealth inequality. As to this more direct focus on the distribution of wealth, while wealthier households receive proportionately more inheritances and in greater amounts,\textsuperscript{67} those inheritances account for less of the total wealth of the receiving household than of more modest households, which receive proportionately fewer and more modest inheritances.\textsuperscript{68} One much-cited study suggests that inheritances overall have an equalizing effect over time.\textsuperscript{69} A more recent analysis, in contrast, concludes that inheritance slightly increases wealth inequality.\textsuperscript{70} A shared view is that any changes in wealth inequality will occur relatively slowly: At least in the short term, inheritance tends to replicate the current, relatively unequal distribution of wealth.

As with statistics on the general distribution of wealth, statistics on inheritance show a strong racial skew. Again, multiple methodologies lead to differing descriptions of the phenomenon. Spilerman notes that the ratio of non-White to White mean net worth declines “from .58 to .14 as one moves to older age groups,” concluding that “white families are either more successful in saving from their incomes, accumulating assets over time, or, more likely, they receive larger inheritances from parents, an assessment supported by transfer data.…”\textsuperscript{71} More directly, Spilerman notes that

\end{itemize}
\end{footnotesize}
African-Americans “have a lower incidence of providing [intergenerational] transfers and lesser amounts are involved when a transfer takes place.”

Elaborating on this point with a comprehensive analysis of relevant data, economist Robert Avery and statistician Michael Rendall show that in 1989 the distribution of inheritances already received is even more unequal between whites and blacks than is the distribution of current wealth. The mean 1989 present value of whites’ inheritances received is 5.46 times that of blacks’, as compared to 3.65 for current wealth. The overall white mean of $28,177 in inheritances and substantial inter vivos transfers constitutes 20.7% of their mean current wealth… The overall mean black inheritance of $5,165 constitutes only 13.9% of their much lower mean current wealth.

Avery and Rendall “estimate that 42.9% of whites, versus 16.7% of blacks, have received or will receive a substantial inheritance or transfer over their lifetimes.” And, “[b]ecause mean inheritances received are greater for whites than for blacks, and the white-black ratio of mean inheritances exceeds the white-black ratio of mean current wealth, then it follows that inheritances received will increase racial wealth disparities in both absolute and relative terms.”

Overall, Avery and Rendall sound a warning as to the detrimental effects of future inheritances on racial wealth equality:

---

72 Spilerman, note 23 supra, at 515. Spilerman continues: “An obvious reason is the smaller wealth holdings of African-American families. But it is also the case that, controlling for parental income and for income and wealth, the incidence of receipt of financial aid by African-Americans falls well below the white rate.” Id.

73 Avery & Rendall, note 66 supra, at 1315, 1318. A contributing factor to the racial disparity is that more Whites than Blacks live in “couple-headed households [with households being the subject of Avery & Rendall’s analysis], giving more whites than blacks two sources of inheritances to come into the household.” Id. at 1318.

74 Id. at 1319.

75 Id. at 1318 (emphasis added). These figures, moreover, only describe inheritances already received. Forecasting prospective inheritances, Avery and Rendall find:

Whites’ mean discounted prospective inheritances are greater than blacks’ by $27,005, in a ratio of 7.46 to 1. This is a considerably larger ratio than that for inheritances already received (5.46 to 1…). Thus prospective inheritances will have a greater role in increasing absolute and relative white-black wealth inequality than have inheritances already received. Id., at 1331.
We noted earlier that the baby boom generation effectively saw a halt in progress toward racial equalization in income, albeit at some significant advantage over their parents’ generation. The larger racial difference in the parent generation’s income, however, will ultimately come back to increase economic inequality of the baby boom generation. The process by which this will happen, and is indeed already happening, is through intergenerational financial transfers (inter vivos and bequests at death) from the baby boomers’ parents to the baby boomers themselves. What this process implies, then, is that even when earnings gaps are reduced, intergenerational transfers will act as a drag on the process of equalization of racial economic status. That racial earnings gaps have not narrowed since at least the beginning of the 1980s, moreover, means that the effect of inheritances may be to increase the racial gap in overall economic status, not just postpone its being narrowed.\textsuperscript{76}

Inheritance, then, contributes substantially to the perpetuation of wealth inequality generally and to the perpetuation and likely even exacerbation of racial wealth disparities. The law of succession, though not overtly racial, facilitates these outcomes through both individual action (testacy) and inaction (intestacy).

II. RACE AND WEALTH

Richard Thompson Ford refers to a “deep inequality” that divides a heavily Black, poor America from a more prosperous multiracial America.\textsuperscript{77} Wealth statistics bear out this characterization: Wealth disparities among Blacks (>100,000 to 1 ratio of median net worth of top wealth quintile to median net worth of bottom wealth quintile) are magnitudes greater than wealth disparities among Whites (only 91 to 1).\textsuperscript{78} On a similar note, the bottom 10\% of White wealth-holding families in 2007 still held $100 of net worth while the bottom 10\% of Black families were $3,600 in debt.\textsuperscript{79}

\textsuperscript{76} Id. at 1334-1335 (emphasis added).

\textsuperscript{77} See text accompanying note 2 supra.

\textsuperscript{78} Yuval Elmelech, Determinants of Intragroup Wealth Inequality Among Whites, Blacks, and Latinos, in Wealth Accumulation and Communities of Color in the United States: Current Issues (Jessica Gordon Nemhard & Ngina Chitegi, eds.) 91, 100 (Univ. of Mich. Press 2006).

\textsuperscript{79} Thomas Shapiro, “Figure 3: Bottom 10 Percent of Wealth Holdings, 1984 and 2007,” in The Widening Racial Wealth Gap & The Future of Our Economy (Meizhu Lui,
Moreover, of the bottom quintile of wealth-holding households, 23.4% were Black compared to 12.1% in the population overall.

A. Present (and Future) Wealth Effects

Just a few years after Oliver and Shapiro’s pathbreaking study, sociologist Dalton Conley offered a different perspective on racial wealth with a focus on the tangible results of wealth disparities and, more specifically, on the degree to which social outcomes correlated to race and/or class. Conley’s data were striking.

Conley found, for example, statistically significant differences in wealth holdings between Blacks and Whites even controlling for individual characteristics such as level of education, age, gender, and previous income. But he also found that when class measures of the respondents’ parents were equalized, the racial differences disappeared. Further, parental net worth (wealth)—not parental education, occupational prestige, or income—was the variable that mattered, though the type of wealth was not predictive. In other words, when Black and White parents had the same net worth, racial wealth disparities in the next generation did not appear. Conley concluded that the locus of black-white wealth inequality lies in the realm of class relations rather than that reflecting racial differences per se. Race and class mirror each other with respect to the wealth distribution; however, in the end it may be the economically disadvantaged family backgrounds of young African Americans more than the color of their skin that hurts their efforts to accumulate wealth.

Tom Shapiro, Jose Garcia, & William Darity (slides for Webinar, 5/17/10) (available at iasp.brandeis.edu/pdfs/IASP-Webinar-Presentation.pdf).

\(^{85}\) Id., at 47-49. Conley separated out liquid assets, primary residence equity, business value, and other illiquid assets. Id. at 47-48.  
\(^{86}\) Id. at 49.
Conley then analyzed the effects of family wealth on three measures of well-being: education, income, and premarital childbearing. As to education, Conley found strong wealth effects. When high school graduation rates are contrasted only by race, Black and White rates are statistically equivalent, but when class differences are factored out, Black students have higher net completion rates, with parental education, business value, and liquid assets having the strongest effects.\(^\text{87}\) As to college graduation rates, parental education and net worth predicted completion of a bachelor’s degree, with primary residence equity and liquid assets being of significance.\(^\text{88}\)

Conley also found parental net worth, parental education, and primary residence equity correlated to greater number of hours worked, though there was still a negative racial effect that did not disappear when he controlled for class. In a more mixed set of results, parental income and parental education corresponded to higher wages while parental net worth and primary residence equity corresponded to lower wages.\(^\text{89}\) The somewhat blurred picture that emerges here is one in which a background of wealth supports employment but may depress wages because it allows for offspring to choose riskier career paths.\(^\text{90}\)

Finally, Conley documented a racial correlation in premarital motherhood beyond class, with Black girls significantly more likely than class-comparable White girls to fall into this group—three times as likely.\(^\text{91}\) In terms of specific class and wealth variables, parental education and

\(^{87}\) Id. at 69-71.

\(^{88}\) Id. at 72-75. Overall, Conley concludes, “Blacks are not disadvantaged in the educational system; rather, they are disadvantaged in the resources they bring to the system.” Id. at 80. The conclusion that racially disparate outcomes can be explained entirely by socioeconomic status is undermined by Conley’s own data with respect to premarital childbearing and social mobility. See notes 91-92, 94-102 infra and accompanying text. As to education, other studies paint a more nuanced picture than do Conley’s data alone. See, e.g., Meredith Phillips, Jeanne Brooks-Gunn, Greg J. Duncan, Pamela Klebanor, & Jonathan Crane, Family Background, Parenting Practices, and the Black-White Test Score Gap, 103, 126 (effects of characteristics of grandparents) and William Julius Wilson, Commentary, 501, 505 (effects of controlling for multiple socioeconomic factors) in The Black-White Test Score Gap (Christopher Jencks & Meredith Phillips, eds.) (Brookings Inst. Press 1998). Conley’s data do show that economic status is a crucial factor, apart from race alone, in determining social outcomes.

\(^{89}\) CONLEY, note 71 supra, at 97-102. Somewhat counterintuitively, his data showed that high parent income corresponded negatively with the number of hours worked—to a greater degree than race.

\(^{90}\) Id. at 104.

\(^{91}\) Id. at 123. The order of magnitude of different is twelve times before controlling for class. Id.
primary residence equity were negatively correlated with premarital childbearing.\textsuperscript{92}

More recent studies have affirmed in particular Conley’s findings with respect to the importance of wealth vis-a-vis the next generation’s educational achievement.\textsuperscript{93} Such educational achievement serves as both the basis for the educated generation’s own wealth generation and well-being and the grounding for the following generation’s educational success. The effects of wealth thus play out directly and indirectly through families over time.

In later work, Conley looked more closely at social mobility data—both intergenerational and intragenerational. According to these data, 69\% of children whose parents were in the bottom wealth quartile in 1984 remained in the lower half of the wealth distribution by 1998-2003. Conversely, more than 76\% of children whose parents were in the top quartile remained in the top half—and more than half (55\%) remained in the very top quartile.\textsuperscript{94} Conley concludes: “[W]here you start out, either as a child or as a young adult, has a large effect on where you end up.”\textsuperscript{95} Overall, after parent education, parent net worth is “the single most powerful predictor of opportunity for the next generation… [That is,] net worth [ ] drives opportunity for the next generation.”\textsuperscript{96} Moreover, “it is much easier for individuals to hold on to their high wealth levels than for individuals to move into high wealth levels.”\textsuperscript{97}

Parsing these data further, Conley finds “striking” racial disparities: “Of whites who were in the bottom wealth quartile as twenty-five to forty-five-year-olds in 1984, 44 percent remained there nineteen years later.”\textsuperscript{98} In comparison, “[o]f [African Americans] who began in the bottom wealth quartile, more than two-thirds (68 percent) remained stuck there nineteen years later.”\textsuperscript{99} Further,

\textsuperscript{92} \textit{Id.} at 124-129. Conley speculates that reasons for a Black-White difference in this category in addition to class include cultural and religious factors and a shortage of Black men due to their lower life expectancy, disproportionate incarceration, and participation in the military. \textit{Id.} at 116.

\textsuperscript{95} \textit{Id.} at 160.
\textsuperscript{96} \textit{Id.} at 155.
\textsuperscript{97} \textit{Id.}, at 159 (emphasis in original).
\textsuperscript{98} \textit{Id.} at 160.
\textsuperscript{99} \textit{Id.}
[t]he situation appears just as grim in terms of racial inequality in downward intragenerational mobility. Of African Americans who were in the top wealth quartile as twenty-five to forty-five-year-olds in 1984, fewer than a quarter (22 percent) remained in the top quartile nineteen years later. The figure is much larger for whites, as 60 percent of whites …remained in the top wealth quartile nineteen years later. Moreover, whites did not fall to the lower quartiles as frequently as African Americans.  

These data indicate that something other than mere socioeconomic indicators is at play. Conley suggests a couple of reasons: documented greater volatility in wealth (significant drops) for Blacks and other factors such as racial differentials in inheritances.  

Conley’s work is important for two reasons. First, it documents tangible connections between wealth and well-being. In this regard, he reveals that the effects of parental wealth on children extend far beyond direct intergenerational transfers and encompass key indirect effects such as education. As a recent Pew report on economic mobility concludes, “one of the ways family background contributes to the economic success of adult children is that relatively wealthy parents can help their children get a good education.” The social mobility that is a key part of the American ethos is tied directly to parent net worth. Wealth matters.

103 Cf. AMARTYA SEN, DEVELOPMENT AS FREEDOM (focus on experienced human conditions rather than wealth generation per se) (Knopf 1999); AMARTYA SEN, THE IDEA OF JUSTICE 225-227 (Belknap Press 2009) (economic indicators only justifiable in terms of conditions of human lives).  
104 Haskins, note 93 supra, at 95. The report continues:  

[If] it were not for the nation’s education system, it might be more difficult for wealthy parents to pass along their income advantage to their children. Without a college education, only 23 percent of the adult children of parents in the top quintile themselves make it to the top quintile. This 23 percent is only a little higher than would be expected if the children of wealthy parents were equally likely to wind up in all five income quintiles. By contrast, with a college education 54 percent of the adult children of parents in the top quintile themselves make it into the top income quintile. Family background is important, but adult children from the bottom can move up if they attain a college degree, and adult children from the top risk falling if they do not attain a college degree.  

Id.  

This refers to income rather than wealth, but is consistent with Conley’s findings.
Second, Conley’s work serves as a prism that separates at least partially the combined light of race-class into two separate beams: race and class. His data do not suggest a “post-racial” society. They do suggest that while race and class are strongly correlated, some of the negative consequences of being Black result predominantly from being poor, while others may relate primarily to the sociocultural role of Blackness. Conley’s data also highlight wealth as a key aspect of class and suggest that various types of wealth may play different roles in social success and well-being.

B. Past Sources of Wealth Effects

Anyone who grows up in the United States is steeped in the social construction of race. We “see” race from a very early age. Though we may be “colormute,” we are by no means “colorblind.”

We have so internalized race as a relevant factor in our dealings with other people that we do not often step back and recall the genesis of race—the reason race as a social category was constructed in the first place. Historian Theodore Allen’s work, THE INVENTION OF THE WHITE RACE: RACIAL OPPRESSION AND SOCIAL CONTROL, reminds us why and how race was created. Race was not the incidental or inevitable effect of different ethnic groups encountering each other and vying for supremacy. Rather, slavery and then de jure segregation were, first and foremost, economic institutions that served to enrich White plantation-owners originally and then Whites more generally. The social construction of race was the means to this end. The creation of two classes of people with significantly different status based on their personal or ancestral origin—“race”—broke up burgeoning class solidarity that threatened to unite Euro- and African-American bond-laborers against the ownership

109 VOLUME ONE (Verso 1994).
110 Allen makes his case with a detailed and compelling analogy to the oppression of the Irish in Ireland by the British in the centuries before that. See, e.g., id., at 32-35, 46-47. Use of the Irish analogy allows analysis of racial oppression “free of the ‘White Blindspot’ that Dr. DuBois warned us about.” Id. at 22.
111 Allen explicitly asserts that racial slavery “must be understood as a sociogenic rather than a phylogenetic phenomenon.” Id. at 23.
class in the late 1600’s and early 1700’s by attaching “Whites” of that class to the economic elite (all of whom were Euro-American) on the basis of common ancestry and carefully selected shared privileges.\textsuperscript{112}

According to Allen, race accomplished this through multiple mechanisms that together served to create two classes—one to serve and enrich and the other to be served and enriched.\textsuperscript{113} The general approach of racial oppression was concurrently to destroy the original social identity of the oppressed class and to exclude members of that class from access to any of the oppressing class’s avenues for creating social identity. So members of the oppressed class were deprived of political and civil rights\textsuperscript{114} and denied access to literacy.\textsuperscript{115} Family rights and authority were displaced—through both White male access to Black women and the absolute discretion of slaveowners with respect to whether families remained united or were separated.\textsuperscript{116} Finally, members of the oppressed class were, in Allen’s term, “declassed”—excluded from membership in any of the normal classes of the dominant social order—by, for example, legislation that handicapped even free Blacks from competing in the economic market by prohibiting them from hiring bond-laborers other than those of African descent—at that time two to three times more expensive than bond-laborers from Europe.\textsuperscript{117}

In wealth terms, slavery created a group of people who by definition could not accumulate positive wealth—whose personal balance sheets may be understood as indicating negative net worth given their status as property and the fact that getting to zero required the investment of purchasing their own freedom. Even after abolition, restrictions on Black economic enterprise continued under \textit{de jure} segregation: The lid was loosened but not removed.

Complementing this enforcement of Black economic disadvantage were measures that used public resources to create White advantage. Even as the Civil War was being fought, the Homestead Act of 1862 made “public land” in the West available to settlers—though not to Black

settlers. After the Civil War, a short-lived Southern Homestead Act opened former plantation lands for homesteading to Blacks. Racial prejudice and access to the land by Whites resulted in large amounts of land ending up in White hands, though “by 1900 one-quarter of Southern black farmers owned their own farms.” The much-bruited “forty acres and a mule” never came to pass.

In the 1900’s, racialized Social Security left domestics and farmers without old-age financial security, benefits under the GI Bill were steered to Whites, and post-War federal housing and transportation policy, which supported single family housing, suburbanization, and “stable” neighborhoods—defined as those in which “properties shall continue to be occupied by the same social and racial class”—severely hampered Blacks in building home equity through the largest federally-supported wealth acquisition program of the twentieth century.

Oliver & Shapiro use the term “sedimentation of racial inequality” to refer to the current disadvantage that results from a history of slavery, various forms of state-sanctioned discrimination, and institutional racism:

What is often not acknowledged is that the accumulation of wealth for some whites is intimately tied to the poverty of wealth for most blacks. Just as blacks have had “cumulative disadvantages,” whites have had “cumulative advantages.” Practically, every circumstance of bias and discrimination against blacks has produced a circumstance and opportunity of positive gain for whites. When black workers were paid less than white workers, white workers gained a benefit; when black businesses were confined to the segregated black market, white businesses received the

benefit of diminished competition; when FHA policies
denied loans to blacks, whites were the beneficiaries of the
spectacular growth of good housing and housing equity in
the suburbs. The cumulative process of such a process has
been to sediment blacks at the bottom of the social hierarchy
and to artificially raise the relative position of some whites in
society.\textsuperscript{126}

The crux of Black sedimentation (and its corollary, what we might
call White skimming) is that the position of each generation has been to a
significant degree dependent on the position of the preceding generation.
Where one generation has wealth—to weather economic reverses and health
problems, to fund education, to help children with down payments on first
homes, to support themselves so as to not be an economic drain on their
families in later years, and finally to leave bequests outright at death—the
next generation enjoys a leg up. Where such wealth is not available, the
economic springs to give the succeeding generation a bounce go missing.

The concentration of Blacks at the lower end of the wealth
spectrum, combined with lesser Black upward social mobility and greater
Black downward social mobility, represents the current manifestation of
White economic advantage and Black economic disadvantage: \textit{Racial
wealth disparities and compromised social mobility for Blacks are today’s
version of yesterday’s segregation and the slavery of the day before.}

This economic carryforward is intertwined with but separate from
the sociocultural aspects of race. The low economic status of Blacks, in this
view, is not simply an outcome of race but its \textit{raison d’etre}, though the
social stigma of Blackness has taken on a life of its own.\textsuperscript{127} These two
aspects of race, moreover, reinforce each other: The sociocultural stigma of
Blackness leads to discrimination that causes or perpetuates economic
marginalization; the economic marginalization of Blacks leads to outsider
status and social stigma.\textsuperscript{128}

Most civil rights law focuses on the sociocultural-stigma-leading-to-
economic (or other)-marginalization part of this cycle. The racial wealth

\textsuperscript{126} Id., at 51 (emphasis added).
\textsuperscript{127} Conley’s data themselves speak to the continuing power of sociocultural race—even when the economics of race are equalized. See note 88 supra and references therein.
\textsuperscript{128} As bell hooks has observed, “In the United States, one’s class standing then is
always determined by racial as well as economic factors.” WHERE WE STAND: CLASS
MATTERS 135 (Routledge 2000).
disparities discussed here, in contrast, call for action that goes to the economic-marginalization-leading-to-sociocultural-stigma arc. This means, I believe, that initiatives to address racial wealth disparities should be formulated so as to not simply remedy the issue but to do so in a way that lessens the sociocultural stigma. This brings us back to colorblindness and race-neutrality.

III. THE LAW OF “DEEP INEQUALITY”

Historically, legal codes overtly denied privilege and imposed penalties on the basis of racial categorizations. The sociocultural stigma and economic marginalization strands of race were tightly braided together. Over time, the explicit racial code has been largely dismantled, and we have arrived at a place where most law is “colorblind.” Such “colorblind” law, which is deemed non-discriminatory in averred intent, is essentially immune from legal challenge, though substantial discriminatory effects remain. The sociocultural stigma and the economic marginalization strands of race are frayed but intact; the braid has been loosened but is not undone.

A. Race-Neutrality: An Obvious Strategy with Un-Obvious Attributes

“Colorblindness” now serves as not simply a defense but an offense for those who seek to prevent official actions designed to ameliorate racial disparities. Though there are both legislative and judicial holdover provisions of affirmative racial protection, the window for such an approach is closing. Witness Justice O’Connor’s statement for the Court in Grutter v. Bollinger: “We take the [Michigan] Law School at its word that it would ‘like nothing better than to find a race-neutral admissions formula’ and will terminate its race-conscious admissions program as soon as practicable. … We expect that 25 years from now, the use of racial preferences will no longer be necessary to further the interest approved today.” The trend is toward race-neutrality as the accepted and enforceable norm for legal action.

---

130 Continuation of the preclearance provisions of the Voting Rights Act and the Supreme Court decision to allow race as one factor in law school admissions decisions are examples. See Northwest Austin Municipal Utility District No. 1 (NAMUDNO) v. Holder, 557 U.S. ___ (2009); Grutter v. Bollinger, 539 U.S. 306 (2003).
131 Id., at 343 (citations omitted).
The challenge then is how to reconcile the seeming debility of a civil rights law grounded in colorblindness with “deep inequality” realities such as the racial wealth disparities perpetuated by race-neutral inheritance law described in this article. In this regard, Ford proposes race-neutral measures designed to target less-well-off people overall:

To fight this entrenched racial inequality, we need to move beyond civil rights to an approach that is both more circumspect and more ambitious. We should be more circumspect in blaming racism, and hidden racists, for problems with more subtle causes. But we must be more ambitious in directly confronting the decline of inner city neighborhoods and the isolation of the urban poor. And many of the reforms needed to improve the ghettos – job creation, more effective schools, better public infrastructure – would benefit poor and working class people of all races, striking a blow against class stratification as well as racial inequality.\(^\text{132}\)

In a similar vein, Lani Guinier and Gerald Torres describe a drive to increase the number of Blacks at the University of Texas, the state’s flagship public university. Advocates for inner city majority-minority schools and poorer majority-White rural schools joined together in support of a measure to ensure admittance for the top students from high schools around the state. This race-neutral initiative, which operated to the relative disadvantage of wealthy suburban schools with predominantly White students that had been previously dominant in admissions,\(^\text{133}\) helped to address a longstanding racial inequality.

The key to such an approach is political viability. In Critical Race Theory terms, the issue is “interest convergence,” which asserts that legal action to benefit Blacks will occur only if it benefits Whites as well.\(^\text{134}\) While this can be viewed cynically, it can also be seen as reflecting greater integration of Blacks into the majoritarian U.S. democracy: After all, political minorities as a general rule have to persuade sufficient others to their cause to create a majority if they are to put their desired policies in place.

---

\(^\text{132}\) Ford, note 2 supra.

The irony here is that race-neutral initiatives, which have resulted from increasing judicial discomfort with imposing remedies for continuing racial inequities and consequent embrace of the “colorblind” approach, have pushed civil rights activists to take steps that reach toward the root of race as it was constructed centuries ago. As Blacks and Whites who are disadvantaged begin to make common cause, joint interests such as economics will be pursued. Allen notes that racial slavery “was not only ruinous to the interests of the African-American, but was ‘disastrous’ for the propertyless ‘whites’ as well.”

What will enable such approaches are cross-racial relationships. Civic organizing, the subject of an earlier article, is the process by which individual citizens build civic networks through forging bridging relationships—of which cross-racial relationships are one type. The connections within the civic networks enable distinct groups to see themselves as fellow citizens and their well-being as linked. From these civic networks emerge new law-stories that more broadly reflect diverse experiences, voices, needs, and yearnings.

B. Using Race-Neutral Initiatives to Reverse the Economic and Social Consequences of Race

If the strategy on the table is essentially to restart the cross-racial awareness of common economic interests that slavery interrupted centuries ago, the basic numbers are promising. Though substantial racial wealth disparities exist, there is another way to cut the numbers: Blacks are disproportionately lacking in wealth, but the actual number of Whites at the bottom of the wealth pyramid exceeds the actual number of Blacks because of the greater percentage of Whites in the population as a whole. Of the bottom quintile of the wealth distribution, the 23.4% that is Black is approximately double the proportion of Blacks in the population overall, but it is still less than half of the 55.9% that is White: Twice as many Whites

---

135 ALLEN, note 109 supra, at 21. To the extent that race continues to interfere with realization of shared interests, new legal and political approaches that help to bridge across that interference are to be welcomed.
137 See also GUINIER AND TORRES, note 133 supra (discussing importance of organizing).
138 Weicher, note 80 supra (1992 data). The 1989 numbers were 29.0% Black and 48.8% White. Id. Data on the middle and top quintiles were unavailable, but numbers for the top 1% of the wealth distribution are 91.2% White (1992) and 94.5% White (1989) compared to 0.2% Black (1992) and 0.7% Black (1989). Id.
as Blacks, that is, are in the bottom wealth quintile. This means that there is potentially a cross-racial class constituency for addressing the needs of those at the bottom of the wealth distribution.

Further, the benefits of greater economic equality may extend beyond those at the bottom of the economic heap.\textsuperscript{139} An increasing body of work reveals that income inequality has detrimental effects not only on the least well-off members of a more unequal society but on all members of such a society. Medical epidemiologists Richard Wilkinson and Kate Pickett, at the forefront of this work, have concluded from analysis of data across nations and across U.S. states that greater income inequality results in a host of negative social outcomes: lower social trust, higher rates of mental illness and drug use, shorter life expectancies, greater levels of obesity, lower educational outcomes, more births to teenaged girls, and more violence and higher rates of imprisonment.\textsuperscript{140}

The degree to which effects such as those found by Wilkinson and Pickett might also result from wealth inequality is unclear. Just as there have been little data until recently on wealth overall, there has been very little focus on the social effects of wealth and wealth inequality in terms of the various measures of health and well-being considered by Wilkinson and Pickett.\textsuperscript{141} Moreover, wealth inequality may well operate quite differently than income inequality.\textsuperscript{142} On the other hand, its evident importance in people’s lives warrants the kind of attention to its potential effects that has been paid to the effects of income inequality.\textsuperscript{143}

\textsuperscript{139} These benefits may extend not only to those in the bottom quintile but also to those in the bottom half. Further, there will likely continue to be a sociocultural bond between middle- and upper-class Blacks and Blacks in poverty.

\textsuperscript{140} WILKINSON & PICKETT, note 33 \textit{supra}, at 67 (mental illness), 71 (drug use), 80 (life expectancy), 92-93 (adult and child obesity), 106 (average literacy of 15-year-olds), 122 (births to women aged 15-19 years), 135 (homicide), 148 (prisoners per 100,000 population).

\textsuperscript{142} The fact that it is far greater may make its effects less applicable to the population at large; and the fact that it is less directly related to consumption may attenuate its practical significance. \textit{See} Richard Wilkinson, e-mail to author, June 23, 2010 (on file with author).

\textsuperscript{143} Further, as noted above, \textit{see} note 26 \textit{supra} and accompanying text, while the wealth distribution is highly skewed, a significant proportion of the population does have significant wealth (especially in the form of homes and pensions), which argues for there being effects of wealth inequality that extend to the population at large.
A final observation made by Wilkinson and Pickett is the low degree of social mobility (correlating to high income inequality) in the United States: “In fact, far from enabling the ideology of the American Dream, the USA has the lowest mobility rate among [the] eight countries [compared.]”\(^{144}\) Here income and wealth appear to be intertwined. Two of the indicators that Wilkinson and Pickett cite as confirming a directly measured correlation between income inequality and lower social mobility are associated with wealth: Access to education and residential segregation.\(^{145}\) Wilkinson and Pickett note both that public expenditures to equalize access to education soften the effects of income inequality and that greater income inequality leads to greater residential segregation. As to the first factor, the converse of their point is that in the absence of public expenditures on education wealth differentials may exacerbate the effects of income inequality. As to the second factor, residential segregation that lowers net worth may also restrict access to education, which may thus reinforce income differentials.

It has been widely noted that while higher levels of economic inequality exist in the United States than in comparable nations, U.S. citizens generally accept this. The standard explanation is that Americans tend to believe in social mobility, in the Horatio Alger story. The facts, as we have seen, demonstrate that this story is much less descriptive of actual possibilities for Blacks than for Whites.\(^{146}\) It is also less true for those at the bottom generally than for those in the middle.\(^{147}\) Given the fact that Blacks have been historically and continue to be overrepresented at the bottom of the economic distribution, the question arises: Does widespread acceptance of high levels of economic inequality—income and wealth—in the U.S. rest, at least to a degree, on this knowledge and a sense of its “rightness”? If so, a significant part of the task ahead is to surface that subconscious equation of how the world does look with how it must or should look and to expose the ways in which the social construction of race continues to affect—or infect—us.

The creation of cross-racial relationships among the economically

\(^{144}\) Wilkinson & Pickett, note 33 supra, at 159.
\(^{145}\) Id. at 160-163.
\(^{146}\) Oliver & Shapiro, note 29 supra, at 160-169. Data on appear to be unavaiable to answer the question whether Whites and Blacks have different levels of optimism on social mobility or acceptance of current levels of economic inequality—income or wealth.
\(^{147}\) See Haskins, note 21 supra, at 54 (“there is ‘stickiness’ at both tails of the wealth distribution, meaning that the greatest wealth similarity between parents and offspring is at the extremes of the distribution”).
disadvantaged and along the economic spectrum can—paradoxically—be accomplished only by explicitly confronting race and its power, though the purpose is ultimately to defuse the power of race.\textsuperscript{148} Race is so essential a part of identity in the U.S. that we cannot become fellow citizens across racial lines without knowing, understanding, and acknowledging each other’s experiences and our shared history. Even if colorblindness may—at least eventually—be an appropriate posture for the law, it may never be and is certainly not today an appropriate grounding for civic relationships.

Cross-racial civic organizing has the potential, over time, to create civic networks that join poor Black to poor White as well as poor Black and White to the wealthier portions of our society. In those civic networks lies the promise of shared stories and understandings from which can emerge new social norms, perhaps relating to the distribution of wealth, and new law that reflects those norms, perhaps relating to inheritance and perhaps to other wealth-related aspects of law such as health care, education, asset-building, and the revitalization of neighborhoods.\textsuperscript{149} Though cross-racial civic organizing will be difficult given our deep social conditioning, it is nonetheless possible. Moreover, it is necessary if we are to move beyond the current “deep inequality.”

Part of the process of de-conditioning ourselves is exposing the institutional racism of our current law. With inheritance law, as with many other manifestations of institutional racism, facially neutral laws lead to racially-nonneutral outcomes. The next step is to generate new ideas of law that actively counter the status quo—here the perpetuation of racial wealth disparities.\textsuperscript{150} Such alternatives can both highlight the contingency of even

\textsuperscript{148} See, e.g., BRONSON & MERRYMAN, note 106 supra.

\textsuperscript{150} The approach I present here shares much with the critique of “post-racialism” articulated by Barnes, Chemerinsky, & Jones. See note 105 supra. I also do not believe post-racialism describes reality. I also acknowledge continued unconscious prejudice and the inappropriateness of “colorblindness” as descriptive of reality. I also note the overwhelming evidence of continuing racial disparities in various key social and economic contexts, though I focus on wealth and homeownership primarily as it relates to wealth.

But my overall perspective on law and social change, see Strand, note 4 supra, and Strand, note 136 supra, leads me to view the struggle to “un-entrench” racist in our social system, see notes 235-236 infra and accompanying text, as calling for adaptation and evolution of new strategies when, as at the current moment, progress has been made and the situation has been transformed but the work remains unfinished. See Fundi: The Story of Ella Baker (1981) (statement by Vincent Harding). The approach I present here to address racial wealth disparities, which is redistributive in the sense it is used by Barnes,
long-settled law and stimulate conversation about desired alternatives. In this spirit, I offer two proposals for changing current inheritance law. The first of these addresses White advantage; the second Black disadvantage.

IV. ADDRESSING RACIAL WEALTH DISPARITIES WITH RACE-NEUTRAL CHANGES TO INHERITANCE LAW

The prior Parts of this article show that

- wealth distribution in the United States is highly unequal from both historical and international perspectives;
- racial wealth disparities are particularly acute;
- current inheritance law in combination with individual choices perpetuates wealth inequalities, including especially racial wealth disparities;
- a relative lack of Black wealth, part of a “deep inequality” in America today, is historically grounded and seriously compromises the well-being and social mobility of Black citizens;
- current civil rights law points toward race-neutral initiatives as constitutional “safe harbors;” and
- race-neutrality can lessen the sociocultural stigma of Blackness at the same time that it addresses economic marginalization.

The two proposals below respond to these imperatives.

A. Inheritance as Windfall Wealth (Addressing Advantage)

The basic structure of our law of inheritance is often said to reflect a presumption of freedom of testation: “In one form or another, the right to pass on property—to one’s family in particular—has been part of the Anglo-American legal system since feudal times.” \(^{151}\) Testation, of course, must be actively chosen. If the freedom is not exercised, the default provisions of intestacy law apply. \(^{152}\)

---

Chemerinsky, & Jones, see note 105, at 1000-1001, is intended as one contribution to what will hopefully be a rich discussion of innovative ways to continue to move forward notwithstanding lesser availability in the near term of the Equal Protection Clause as a tool for affirmative change.

\(^{152}\) See note 59 supra and accompanying text.
Nor is freedom of testation absolute. Enforced spousal share provisions generally prohibit disinheritance of spouses, and other exceptions provide for pretermitted children and post-testation marriage and divorce. Finally, the estate tax limits the freedom of the wealthiest testators to pass on their property. These exceptions do not, however, challenge the essential conceptual underpinning of freedom of testation—the idea that a normal part of the “bundle” of property rights is designating who will get one’s property when one dies.

Shelly Kreiczer-Levy has proposed that inheritance law in reality is “bifocal”: In addition to the standard emphasis on the testator’s freedom of testation, socially-recognized recipients (usually family) also have a “belonging” interest embodied in provisions protecting them explicitly as well as, for example, in undue influence cases that give unspoken preference to family members. Kreiczer-Levy proposes explicit acknowledgement of “belongingness” as a value in inheritance law, along with, though perhaps not commensurate to, freedom of testation. She asserts that this value arises from a shared interest of both testator and heirs in continuity, of which property is one concrete symbol.

Seen this way, a third value in inheritance law that has been long present but not clearly articulated becomes apparent: the public policy or social interest in the disposition of a decedent’s property. The familiar cases limiting restrictions on marriage, the support justification for the enforced spousal share, and the redistributive goals of the estate tax all

---

153 See, e.g., Hodel v. Irving, note 151 supra, at 717 (“we reaffirm the continuing vitality of the long line of cases recognizing the States’, and where appropriate, the United States’, broad authority to adjust the rules governing the descent and devise of property without implicating the guarantees of the Just Compensation Clause”).

154 FRIEDMAN, note 1 supra, at 15.

155 DUKEMINIER, SITKOFF, & LINDGREN, note 60 supra, at 527-534.

156 Id., at 305-307.

157 FRIEDMAN, note 1 supra, at 14. When I refer here to the estate tax, I include not only the federal estate tax but also inheritance taxes levied by the individual states. See DUKEMINIER, SITKOFF, & LINDGREN, note 60 supra, at 933-934.

159 Id.; Mary Clark’s work identifies three propensities of human nature: autonomy, bonding, and the search for meaning. In SEARCH OF HUMAN NATURE 57-59 (Routledge 2002). Autonomy and bonding are both complementary and in tension, and the bifocal interests in law identified by Kreiczer-Levy echo these propensities.

160 See In re Estate of Feinberg, 919 N.E.2d 888 (Ill. 2009), Shapira v. Union National Bank, 315 N.E.2d 825 (Ohio Ct. of Common Pleas 1974), and cases cited therein.

161 See DUKEMINIER, SITKOFF, & LINDGREN, note 60 supra, at 476-477. See also id., at 469-471, 475-476 (traditional partnership rationale in community property jurisdictions;
fall into this category. What happens to property at death, then, is **trifocal** and reflects equipoise among the decedent’s interest in autonomy, the relationships between decedent and his or her likely heirs (Kreiczer-Levy’s “belongingness”), and the social meaning of the passage of property.\(^{163}\)

If the likely result of allowing present inheritance practices to continue unimpeded is the perpetuation and even increase in Black-White wealth disparities, there is a significant social interest in rechanneling the current intergenerational flow of wealth. But simply redirecting the flow of wealth will not suffice: The challenge is also to change the prevailing story.\(^{164}\) Broadly taxing inheritances as windfall income accomplishes both goals.

Currently, middle class wealth—which as we have seen tends to be disproportionately White—passes freely at death, enriching the next (White) generation. Taxing inheritances as income to the recipients would reach some of the wealth acquired over generations by Whites disproportionately—often with government support—and would begin to equalize rather than accentuate racial (and other) wealth disparities.\(^{165}\) Taxing inheritances as income would also begin to change the “story” of inheritance from one in which the estate remains the decedent’s property to do with as he/she wishes to one in which windfall receipts by some citizens, lucky in their birth, are treated the same as citizens who are lucky in other ways, such as by winning the lottery.\(^{166}\)

---

\(^{162}\) See FRIEDMAN, note 1 supra, at 172.

\(^{163}\) Mary Clark’s third propensity, the search for meaning or the relevance of individual action to a larger whole, is at play here. CLARK, note 159 supra, at 58. See also Strand, note 136 supra, at .

\(^{164}\) See generally Strand, note 136 supra, at .

\(^{165}\) Compare this conclusion with that reached by Beverly I. Moran and William Whitford, A Black Critique of the Internal Revenue Code, 1996 WISC. L. REV. 751, 783 (endorsing continued lack of taxation on most intergenerational wealth transfers; though Black Americans have generally been unable to pass wealth intergenerationally, with detrimental effects on Black wealth, authors conclude a “Black Congress would prefer to encourage, rather than discourage, such transfers”). If free, generally untaxed continuation of intergenerational wealth transfers will exacerbate current racial wealth disparities, as this article concludes, I suggest that curtailing that freedom is the preferable choice.

\(^{166}\) In my view, the best proposal—due to its specificity, practicality, and widespread applicability—was articulated two decades ago by Alicia H. Munnell, then with the Federal Reserve Bank in Boston. See Alicia H. Munnell, with the assistance of C. Nicole Ernsberger, Wealth Transfer Taxation: The Relative Role for Estate and Income Taxes, NEW ENGL. ECON. REV. 3 (Nov./Dec. 1988). Note that Munnell’s proposal also includes an estate surtax on the very wealthiest estates. For other proposals and perspectives, see Lily L. Batchelder, What Should Society Expect from Heirs: The Case for a Comprehensive
This shift would tap into a distinct strain in public opinion that recognizes that inheritance is at odds with the widely-embraced American image of equal opportunity. Surveys, for example, reveal that “a large majority of those surveyed recognize inheritance as a source of economic inequality. In one survey, for example, when questioned about why people have wealth, 64 percent responded ‘very important’ and 29% said ‘somewhat important’ to the item ‘money inherited from families.”

According to the American ideology of inequality, people deserve what they get based on their merit. But the lived experiences of individuals tell them that “it takes money to make money” (inheritance), that “what counts is not what you know but who you know” (sponsorship), and that fortune smiles on those who happen to be “at the right place at the right time” (luck).

Americans already know that the equal background conditions that make equal opportunity real are inconsistent with the current system of inheritance.

Overall, “[t]he paradoxical nature of inheritance derives … from the fundamental ideological contradiction between freedom of choice at the individual level and equality of opportunity at the societal level.” Part of what shifting from an estate to a personal income tax on windfall receipts including inheritances accomplishes is to begin to illuminate how individual freedom of choice actually denies equal opportunity at a societal level—at least in our society as currently configured. The cognitive dissonance is already there. The proposed approach merely

---

168 *Id.*

169 *Id.*, at 8.

170 Note that there are other individual decisions that contribute to the emergence of the pattern of continued racial wealth disparities. Among them is the continued practice of “in-race” marriage: While interracial marriages have risen in recent decades, they still constitute only about 15% of all new marriages and 8% of marriages overall (2008). **JEFFREY S. PASSEL, WENDY WANG, & PAUL TAYLOR, MARRYING OUT: ONE-IN-SEVEN NEW U.S. MARRIAGES IS INTERRACIAL OR INTERETHNIC** (June 2010) (Pew Research Center) (available at www.pewresearch.org/pubs/1616/american-marriage-interracial-interethnic). The proposals in this article assume that interventions regarding where people’s wealth goes are more appropriate than interventions regarding whom they marry.
brings it closer to the surface.

Three additional features enhance the proposal’s efficacy and ruffle complacency with the existing “story.” First, the proposed income tax should distinguish owner-occupied residences from other inherited assets. In particular, owner-occupied residences that are passing to either another current occupant or to someone who will occupy the house should pass free of tax. In contrast, owner-occupied homes that are sold and the proceeds distributed are—to the receivers—just an economic asset and should be treated the same as other inherited windfall wealth.

Such an exemption recognizes that owner-occupied homes are not simply assets; they are also directly consumed by their owners.\footnote{See \textit{Wolff}, note 20 \textit{supra}, at 5-6.} It thus makes sense to treat them as continuing family self-support rather than as the intergenerational transfer of excess wealth. Further, and going to the issue at hand, this exemption acknowledges the disproportionate level of financial assets held by Whites, with Blacks holding more of their assets as primary residence home equity. It also acknowledges that multiple generations of economically-challenged families may be more likely to live together,\footnote{\textit{Paul Taylor et al., The Return of the Multi-Generational Family Household} (March 2010) (Pew Research Center) (available at www.pewsocialtrends.org/pubs/752/the-return-of-the-multi-generational-family-household).} the assumption and practice often being that when the older generation dies the next generation (or generations) will continue in the family home.

Second, a fixed-amount exemption should apply to all items to be taxed—assets apart from the family home identified previously.\footnote{Munnell, note 166 \textit{supra}, at 22.} Different rationales lead to different amounts for such an exemption. One rationale would be to exempt everything below a certain level in terms of the amount of the decedent’s estate—say, the median or a percentage of the median of all estates. In combination with the owner-occupied primary residence exemption, this would lead to a total lack of tax for most Black estates due to their low net financial worth, but it would also lead to no tax at all for the many White estates that lie below the specified level.\footnote{This approach could incorporate two technical measures addressing specific practical issues that result from treating inheritances as income. One leading proposal that called for this type of shift included both of these measures. The first measure, which is to provide a combined lifetime exemption for \textit{inter vivos} transfers and inheritances, ensures that the “windfall wealth” nature of both types of transfers is recognized, that they differ}
Third, people who inherit owner-occupied homes located in areas that were once red-lined (and perhaps also yellow-lined) and that were purchased by the decedent or a family member during that time receive a tax credit. Oliver and Shapiro’s discussion of the wealth forgone by Black families who were blocked from purchasing homes in predominantly White (green-lined and blue-lined) areas—which then appreciated in value to the extent of forming the weight of solid middle class White wealth today—makes a very specific case for the federal government acting to at least in part ameliorate the costs that are apparent today from decisions made a generation ago.

While such a credit would, as with the other aspects of this proposal, disproportionately benefit Black families, it would benefit many others as well. It was not only Black families who bought and owned houses in red- or yellow-lined neighborhoods; the value of the houses owned by others suffered as well. The precise amount of such a tax credit might depend on, among other factors, when the home was purchased, the relative values of homes in different parts of that metropolitan area, and whether services such as curbs, gutters, sidewalks, transportation, shopping, and other amenities were historically and are today provided. Though these are often related to local government decisions, those decisions may track the levels of investment in neighborhoods—levels determined to a large degree by federal government actions.175

This is, of course, just an outline of a proposal with details to be worked out, but the important points are threefold. The perpetuation of Black-White wealth disparities via inheritance is not inevitable. It has occurred and will continue to occur—but only so long as our law of inheritance facilitates it. Moreover, changes in that law can address both White advantage and Black disadvantage while conforming to race-neutrality in how the provisions are shaped. While the designation of

only in their timing. (This comparability is currently recognized by the integrated gift and estate taxes.) Id. at 21-22.

A second measure, which addresses an issue common in the lottery windfall context, is to provide for income averaging to spread the effects of what is generally a one-time transfer over a number of years. The recipient pays income tax but can spread the income to potentially access lower tax rates—a result of a progressive income tax system. While this diminishes the increased income tax from the proposed change, the overall tax effect will likely be revenue-positive as transfers not currently reached by the estate tax would be taxed. Id. at 22.

175 The existence of such a tax credit could also create an incentive for potential owners to take actions necessary to clear title. See note 229 infra and accompanying text.
housing areas was based on race, the current proposal applies to all who incurred financial injury regardless of race. Finally, the proposed race-neutral provisions, while disproportionately benefiting Blacks, also benefit large numbers of Whites, thus emphasizing the common economic interest of low-wealth citizens across the board and sounding another note against the conflation of race and class.

B. Intestacy and the Problem of Evaporating Heirs’ Property (Addressing Disadvantage)

The prior section, like most discussions of the law of inheritance, focuses on the treatment of wealth that is identified, acknowledged, and claimed. This can be understood as a top-down view of the law of inheritance. But there is also a bottom-up view, and this view is both quite different and much less clear. This is the view that focuses on the wealth of people who are at the low end of the spectrum and how that wealth is passed to succeeding generations. The concern here is to preserve that wealth so that families who have worked their way onto the wealth ladder, even its very lowest rungs, do not slip off.

The ways in which the law of inheritance affects those with minimal wealth in particular have been little noted. Also scarce are descriptions of how people with modest wealth experience inheritance and how they interact with the current law of succession. The proposal in this section is based on the few academic studies that have been done and on my own conversations with practitioners who represent people in this group. Further exploration of the experiences and needs of these households is essential.

Unlike people with significant wealth, who are relatively likely to exercise the freedom of testation described above, people with fewer assets are substantially more likely to die intestate. Currently, somewhere in the

---

176 Compare, in this regard, the exhaustive discussions of the estate tax, trusts, and other mechanisms that affect those with significant assets.

178 Professor Kate Mahern (Director, Creighton Law School Legal Clinic, Omaha, NE); Mavis Gragg (Vira Law Firm, Carrboro, NC); Susan Blumenthal (Bryan Cave LLP), Tanya Harvey (Bryan Cave LLP), & Mark Herzog (DC Bar Pro Bono Project) (DC Bar Probate Resource Center, Washington, DC). I have also benefitted from conversations with others who have shared personal or family stories. I refer to these collectively as Conversations.
neighborhood of a third of U.S. adults have a will.\(^{179}\) Wealthier individuals are more likely to have wills,\(^{180}\) as are older people.\(^{181}\) And, apropos of the racial wealth disparities that are the primary subject of this article, Whites are more likely than Blacks to have wills—35% versus 16.4% (nonwhites).\(^{182}\) While there are several common reasons given for not executing a will (not wanting to confront dying, not knowing someone to consult, cost, antipathy toward lawyers), the most common is that people think they don’t have enough assets.\(^{183}\)

There are distinctive issues that arise when individuals die intestate. These issues relate both to the substance and the process of intestacy law. Before analyzing these legal issues, however, I present a fact pattern that I believe from my conversations to be not uncommon.

*An Heirs’ Property Story*

At some point in time, a married couple purchases a home. While the original owners are both alive, the husband does most of the repairs and maintenance on the house, so the cost of upkeep is not prohibitive. The husband then predeceases the wife. Legal ownership and title pass automatically to the wife as the house is, most likely, held in joint tenancy. The now-widow continues to live in the house either alone or, frequently, with a child or other family members who have already been living there or who move in to help care for her as she ages. This child or other family, of course, receive the economic and emotional benefits of living in the family home as well.

The widow/mother/grandmother dies intestate. Several children and perhaps several grandchildren, if at least one child predeceased her, are heirs by representation as tenants-in-common so that each heir has a fractional interest in the whole property—which leads to the designation

\(^{180}\) DiRusso, note 179 supra, at 50-51.

\(^{181}\) Id. at 51-54.

\(^{182}\) Id. at 42-45. *See also* lexisnexis, note 179 supra (32% of African-Americans, 25% of Hispanic-Americans, and 53% of white-American adults have wills or other estate plans).

“heirs’ property.” It also means that anyone with an ownership interest can
bring a partition action, which might well result in the sale of the property
and division of the proceeds.184

The value of the house (likely located in a low-value neighborhood)
may not be substantial, and the house may already have been neglected
somewhat as the husband aged or after he died. This in conjunction with
each heir having a small interest leads to the heirs not claiming their
economic share of the home’s value. Or they may regard it as the family
homestead with a history worth preserving. All heirs, at least all those
present, agree not to sell the home to extract its economic value, and the
estate is never probated. This failure to probate can occur even if the wife
has a will.

In conjunction with the decision not to sell the home, the heirs agree
that the family member or members who were living in the house before the
wife’s death can continue to live there. He or she pays property taxes in the
original owners’ or owner’s name. This may continue for a substantial
period of time or into additional generations. By operation of intestacy law,
as time passes, ownership becomes more and more fractionated until a
number, even a dozen or more, people have very small ownership interests
while at the same time having little experienced connection with the home
or even a complete lack of awareness that they have an interest in it.

At some point, this arrangement, with the house still titled to the
original owner(s) but with legal ownership as heirs’ property spread far and
wide, hits a brick wall. Often the problem is the payment of property taxes.
Perhaps the occupant cannot pay, or he or she seeks contributions from the
other owners, who cannot or see no reason to invest in a property from
which they receive no benefit.185 Or low-cost loans are available to fix or
improve the home186 or a reverse mortgage to support the occupant is
indicated,187 but a lack of clear title precludes eligibility. Or the area in
which the home is located is being redeveloped and the developer wants to
purchase the home.188 Or disaster hits, and disaster relief is conditioned on

184 See Way, note 177 supra, at 151-156. These issues are similar to those presented
by Black heirs’ properties. See, e.g., Thomas W. Mitchell, From Reconstruction to
Deconstruction: Undermining Black Landownership, Political Independence, and
185 Conversations, note 178 supra.
186 Id.
187 Id.
188 Id.
Depending on the economic incentives, the current occupant—usually but not always a part-owner—may or may not be able to secure the legal assistance necessary to open probate, locate all the heirs, and clear title. While conceptually straightforward, this action is often a logistical nightmare: People move away, lose touch, have and adopt children, remarry and have more children, have children out of wedlock, go to prison, and die in faraway places without their families knowing. When the economic benefits are relatively low (saving a modest home from being lost due to property tax liens), legal assistance with estate administration is often unavailable. These cases demand many hours, and the rewards appear minimal—though they may constitute a significant part of the overall wealth holdings of the family. When the economic benefits are high (clearing title to sell the home for a redevelopment project, for example), legal assistance may be forthcoming, but legal fees may take a substantial percentage of the proceeds from the sale.

The final step may be eviction of or abandonment by the occupant and repossession for tax liens by the local government and razing of the property if deterioration is too far along. Blighted neighborhoods are one result. Another is loss to the family of the wealth earned by a prior generation.

Destructive Effects of Intestacy Law

Way, note 177 supra, at 157 (Hurricane Katrina).

Conversations, note 178 supra.

Id.

Id.

Way, note 177 supra, at 160-161.

These issues overlap but are not the same as those raised in the context of rural property owned in tenancy-in-common by Blacks in the South. With those heirs’ properties, the primary problem with the operation of intestacy law is that fractionated ownership and partition actions can result in a judicially-ordered sale rather than actual partition, even when it is a developer who has acquired a small interest from a part-owner bringing the partition action and the other owners want to keep the property. The result has been a “rapid decline of African-American land ownership in the southeastern United States, in part through partition.” Way, note 177 supra, at 175. See also Mitchell, From Reconstruction to Deconstruction, note 184 supra; Anna Persky, In the Cross-Heirs, ABA 44 (May 2009).

Way points out that, in contrast to the rural heirs’ property problem, “there has been very little analysis of the prevalence and issues created by tenancy-in-common ownership amongst low-income homeowners in other settings, such as urban and semi-urban communities or areas with smaller non-agricultural homesteads.” Way, note 177 supra, at 175-176.
This type of situation results from operation of essential aspects of the law of intestacy. First, by virtue of the **substantive** law of how ownership interests pass to descendants—by representation in one form or another—division of ownership is given precedence over consolidation and alienability. Second, by virtue of the **procedural** law of how title passes in the case of intestate assets, affirmative action in the form of probate is generally required for the legal transfer of title.

Heather Way discusses both of these problems comprehensively, identifying the following issues:

- balancing the interests of homeowner-occupants with those of other heirs;
- low-income, low-wealth homeowner-occupants who want to stay in the home but cannot afford to buy out other heirs;
- the role of social interests such as “promoting upkeep of homes, preserving familial and cultural ties to the homestead, ensuring the alienability of property, and economic efficiency”; and
- the role of factors such as “[t]he length of time that an owner-occupant has lived in the home; [h]ow long a property’s ownership has been fractionated; [t]he number and size of the fractionated interests; [w]ether an heir has made any contribution to the maintenance and upkeep of the land or has any personal ties to the property; and [w]ether an heir is unknown or cannot be located.”

Way then offers a multitude of proposals for legal reform, which she groups into seven areas. Two of these areas relate to providing legal assistance to low-wealth homeowners—before the fact in estate planning and after the fact in estate administration—to facilitate the passage of title under the current legal regime. One area relates to reforming housing

assistance programs to practice greater leniency vis-à-vis proof of title.\textsuperscript{201} Though Way’s focus is on disaster relief, a more common application of this would be in the context of loans by local governments and others for property repair and maintenance.\textsuperscript{202}

The other four areas of need that Way discusses relate to legislative changes in current state intestacy laws. Way focuses most of her attention on proposals for changing the \textit{substantive} law that governs property inherited through intestacy—with the emphasis on ways to facilitate consolidation of ownership, primarily for “homesteads below a certain market value” that are not “of cultural significance;”\textsuperscript{203} reform of partition laws, with disincentives for outside speculators to buy in and protections for a part-owner’s investment in the property;\textsuperscript{204} and collective management of property through, for example, easier or automatic creation of LLC- or land-trust-type arrangements.\textsuperscript{205}

Way also presents several ideas for changing \textit{procedural} law to ease the transfer of title to intestate heirs. These include creating an expedited process for estates in which “the only significant asset in the estate is a home of moderate value or less;”\textsuperscript{206} requiring that estates be administered within a certain time of death;\textsuperscript{207} or easing formalities by allowing for affidavits of heirship or even oral transfers.\textsuperscript{208} Way also suggests more general process initiatives such as an overhaul of state property recordkeeping systems to place a responsibility for clearing title with the state\textsuperscript{209} or a “legal audit of the state’s title transfer system.”\textsuperscript{210}

\textsuperscript{201} \textit{Id.} at 189-190.
\textsuperscript{202} \textit{Id.; Conversations,} note 178 \textit{supra}.
\textsuperscript{203} Way, note 177 \textit{supra}, at 181. Way sets forth five options for consolidation of ownership: (1) reforming statutes of limitation and creating a “long-term co-tenant-in-possession action;” (2) expanding how states define marketable title; (3) allowing homeowner-occupants to force sale of other heirs’ interests; (4) allow courts to clear title in tax foreclosure and nuisance abatement actions; and (5) provide government assistance for purchasing co-owners’ interests. \textit{Id.} at 179-184. Each of these has strong and weak points. \textit{Id.} at 184-185.
\textsuperscript{205} \textit{Id.} at 185-188.
\textsuperscript{206} \textit{Id.} at 177.
\textsuperscript{207} \textit{Id.} at 178 (recognizing that this is only fair and feasible if processes are streamlined and support provided to those navigating them).
\textsuperscript{208} \textit{Id.} at 178.
\textsuperscript{209} “When a property owner dies and no deeds or probate documents are filed in the real property records after four years or so, the government could presume that the household needs some type of assistance in formalizing transfer of title and then institute more proactive steps to facilitate the transfer.” \textit{Id.} at 179.
\textsuperscript{210} \textit{Id.} at 177. “How accessible is this system to low-income homeowners? Is there a
Way’s analysis and my conversations with practitioners in the field illuminate how the intertwined substantive and procedural aspects of intestacy law interfere with the smooth passage of modest value homes from one generation to the next—a transfer of wealth that is of particular importance in keeping families with some but not much net worth from losing it between generations, a category that encompasses a disproportionate number of Black families. To begin with, such homes in such estates are treated the same way as any other assets in any estate. Yet the value of a home is not simply its economic value but its consumability. If it is of modest value and if there are a number of heirs so that each heir’s “share” is quite small, does it make sense to split ownership? Doing so will almost certainly create a situation in which the transaction costs of probate, including most likely the sale of the home and the distribution of proceeds, make settling the estate an unattractive option. Unsettled estates result in clouded title with detrimental effects.

Intestacy law, as most of the law of inheritance, was developed for people with substantial property—people for whom the value of the property clearly exceeded the transaction costs associated with transfer to the next generation. As more and more people fall into the category of having wealth worth preserving, the traditional system (of intestacy and wills—both of which require probate) has become less and less satisfactory. The anti-probate revolution that began in the 1970’s has led to substantial U.S. wealth passing by nonprobate means. The living trusts Norman Dacey advocated may be the face of that revolution, but POD and TOD provisions for bank and brokerage accounts, life insurance, and other private designations of beneficiaries have also grown exponentially. The middle class has exerted political pressure, and will substitutes by which wealth passes with much greater ease than via probate have been endorsed—especially for those with net financial worth. Those who are stuck with probate (even new, streamlined or small-estate probate) are those whose net worth is in the form of real estate, often only a modest home, and those who die intestate—people who have less wealth, who

211 This may be particularly true for more strapped families with multiple demands on their resources—time, money, and energy. Conversations, note 178 supra.

happen to be disproportionately Black.\footnote{Id. at 47.}

\textit{The Importance of Clear Title}

Here is the point at which it becomes all too easy to assign blame. Low-wealth homeowners who get caught in this intestacy trap—those who fail to make wills or those who do not initiate probate proceedings (whether or not there is a will)—serve as one likely target. Attorneys, whose estate planning services are not readily available to low-wealth clients and who in most instances avoid undertaking estate administration for heirs’ properties, provide another.\footnote{See HERNANDO DE SOTO: THE MYSTERY OF CAPITALISM: WHY CAPITALISM TRIUMPHS IN THE WEST AND FAILS EVERYWHERE ELSE 198 (Basic Books 2000).}

A blame game, however, distracts attention from the fact that the intestacy trap, while harming the individuals involved, is also a \textit{social} problem. I have already referred to some of the consequences of clouded title to homes: obstacles to low-rate loans designated for upkeep, neighborhood decline and associated problems such as crime, and the loss of the local tax base. Moreover, the lack of secure title goes hand in hand with deficient alienability and limits economic value. Homes without clear title exist in a kind of legal purgatory: They are not held \textit{illegally}; but they are not held precisely \textit{legally} either.

Economist Hernando de Soto asserts that the reason capitalism has succeeded in the West is that our system of law has recognized arrangements made “on the ground”\footnote{Id. at 172.} and responded by altering formal property law to accommodate and recognize previously informal arrangements:

\begin{quote}
The systematization of the laws that underpin modern property rights systems was possible only because authorities allowed preexisting extralegal relationships among groups on the ground sometimes to supersede official laws: “Law both grows upward out of the structures and customs of the whole society…and moves downward from the policies and values of the rulers of society. Law helps to integrate the two.”\footnote{Id. at 173 (quoting HAROLD J. BERMAN, LAW AND REVOLUTION: THE FORMATION OF THE WESTERN LEGAL TRADITION 555-556 [Cambridge: Harvard University Press, 1983]). See also Strand, note 4 supra, at 611-615; note 4 supra and accompanying text.}
\end{quote}
In the U.S., in particular, “[w]hen confronted in the past with widespread informal land holdings that lacked clear title, the country has responded by changing the law to legitimize these more informal property arrangements.”

De Soto focuses on societies in which there is a complete disconnect between mandatory law and how things are actually done. He finds that a “common denominator … [is that people] cannot pay the costs of legally obtaining property.” The journey to legality, he concludes, must be “easy, safe, and cheap.” To discover what will work, he advises governments not to “hir[e] lawyers in high-rise offices…to draft new laws…[but to] go out into the streets and listen to the barking dogs.” The goal is to discover the law. What is already happening? How are people handling things now? What do they need to make things work?

De Soto’s insight and questions are disturbingly applicable to the world of low-wealth homeowners. As with other groups throughout our history who were not well served by conventional property laws, there is a benefit to the society at large in building a bridge. Way notes that in Louisiana “an estimated 15% of the homeowners who applied for federal housing assistance after Hurricane Katrina—approximately 20,000 homeowners—had clouded title, including many homeowners concentrated in the low-income neighborhoods of New Orleans Parish.” Clouded title has concrete adverse effects on homes, neighborhoods, and communities. But it also, vis-à-vis the overarching topic of this article, serves to both understate and diminish the value of the underlying assets to their individual owners. Homes with clouded title cannot serve as the basis for home equity loans to finance college educations. They cannot serve as collateral for new business ventures. They are, in de Soto’s words, “dead capital.” Clouded title also keeps the owners in a shadow world in terms of the law—for estate planning purposes and more generally. It alienates and erodes respect for the law where it could embrace and build such respect.

In response to this ill, de Soto calls for lawyers to “step out of [our] law libraries into the extralegal sector.”\(^{227}\) The necessary empirical research I referred to above can respond to this call, but it must incorporate inquiries into people’s actual experiences under the current legal system, fix problems from past operation of that system, and explore how the system might operate differently in the future. From these inquiries, in which people adversely affected by current intestacy law are given voice, revisions in intestacy law could emerge.

This discussion has sketched the outline of a race-neutral proposal to reexamine intestacy law with an eye to revising it so that it facilitates the intergenerational transfer of wealth for families with modest net worth, especially when that net worth is in the form of a family home. The overarching goals are the preservation of family wealth from generation to generation and, to that end, the facilitation of the clearing of title. These goals should apply both retroactively and prospectively, though past and future may call for distinct approaches.

Specific needs, among others that would surely emerge, are (1) eliminating fractionated ownership for modest estates with a family home as the primary asset; and (2) facilitating intergenerational transfer of clear title while protecting against possible inappropriate pressure on elderly owners. As to the first, while facilitating collaborative ownership may be a top priority for rural heirs’ property,\(^ {228}\) aligning ownership and occupancy are likely to be more important with other homesteads. As to the second, current privatized will substitutes provide an inherent protection against pressure on elderly owners in the form of the interest of the third-party bank, insurance company, or other institution in ensuring that the person designating the beneficiary(ies) is exercising appropriate and independent judgment. There is no comparable safeguard for a POD/TOD-type arrangement with real estate because of the nature of the property, which may indicate a different approach.\(^ {229}\)

As with the proposal in the prior section, these ideas for reforming intestacy law provide only a framework. Both approaches, however, rest on

\(^{227}\) Id. at 186.
\(^{228}\) See, e.g., Mitchell, From Reconstruction to Deconstruction, note 184 supra, at 568-572.
\(^{229}\) In addition, the tax credit for homes in previously red- or yellow-lined neighborhoods proposed above, see note 175 supra and accompanying text, would provide an incentive for intestacy heirs to take action to clear title—but only if the mechanisms to do so are not prohibitive.
the conviction that the perpetuation of racial wealth disparities can be slowed and potentially reversed. Changes in our law of succession can accomplish this, and these changes—while significant—need not be radical. Inaction, however, is tantamount to acceptance of the status quo. Overall, race-neutral changes can accomplish the desired goal constitutionally and will also contribute to an awareness of the common interests of low-wealth families—Black and White.

IV. CONCLUSION

I started my inquiry with a focus on the distribution of wealth generally and on whether our law of inheritance in fact serves to reproduce the social structure. I found that in the U.S. we have high levels of wealth inequality and over generations the rich tend to stay rich and the poor tend to stay poor. Inheritance is a significant variable in the temporal equation that solves to net worth.

I also found notable racial skew to the system. Whites disproportionately have wealth; Blacks disproportionately lack it. Moreover, our law of inheritance perpetuates and perhaps even accentuates this skew.

Inheritance and wealth are part of a continuing “deep inequality” that isolates low-wealth Blacks from mainstream America—in hypersegregated housing, in restricted access to education, and in compromised social mobility—what might be considered to be meaningful “equal opportunity.” Inheritance and wealth affect even higher-wealth Blacks’ secure grasp of middle-class status.

In response to these revelations, I set forth two proposals for reform of inheritance law to break up the cycle that perpetuates White advantage and Black disadvantage. The first proposal calls for taxing inheritances—windfall wealth—as income to those who receive them. The second focuses on revising intestacy law to preserve modest wealth between

232 See notes 94-102 supra and accompanying text.
generations. The latter proposal continues a societal trend of making inheritance law more workable for those with less and less overall wealth.

Both of these proposals are race-neutral: They would benefit many low-wealth families regardless of race, though they would be of particular importance to Black families because Black families are overrepresented in that group—in large part because of historical events and, in fact, inheritance. The race-neutrality of these proposals would highlight the common economic interests of low-wealth households and take us a step further from the deep-seated race-as-class system that has prevailed for so long. Moreover, the mitigation of high levels of wealth inequality generally could benefit us all—regardless of our place in the wealth distribution—given evidence of the greater well-being of more equal societies.

I see the analysis and proposals here as consistent with much current thinking on racial reparations. Charles Ogletree, for example, has observed:

The reparations movement should not, I believe, focus on payments to individuals. The damage has been done to a group -- African-American slaves and their descendants -- but it has not been done equally within the group. The reparations movement must aim at undoing the damage where that damage has been most severe and where the history of race in America has left its most telling evidence. The legacy of slavery and racial discrimination in America is seen in well-documented racial disparities in access to education, health care, housing, insurance, employment and other social goods. The reparations movement must therefore focus on the poorest of the poor -- it must finance social recovery for the bottom-stuck, providing an opportunity to address comprehensively the problems of those who have not substantially benefited from integration or affirmative action.233

Ogletree’s insight goes to the fact that the continuing injury of slavery and the system of race it spawned lies today in the current configuration of our social and economic systems.234 In this view, reparations should be designed to recalibrate the system in ways that diminish or, ideally, eliminate the relevance of race as a determinant of

234 See also TATUM, note 11 supra, at 7 (defining racism as a system).
social status. The challenge is to formulate actions that at the same time work to reverse the concrete effects of the past race-based system and to dismantle the social construct of race-as-class. In this regard, race-neutrality, though often perceived as a confining constitutional straitjacket, may actually offer a promising strategy for expediting movement forward.
