Syllabus of Intermediate Econometrics (Master's Course)

Reza Moosavi Mohseni, Dr.
Contents:

1. Introduction
2. Simple Linear Regression: Ordinary Least Squared (OLS)
3. Multiple Linear Regression: Ordinary Least Squared (OLS)
4. Maximum Likelihood Estimator (ML)
5. Generalized List Squared (GLS)
6. The Violation of the Basic Assumptions:
   i. Heteroskedasticity
   ii. Autocorrelation
   iii. Multicollinearity
7. Some Other Important Tests
8. Seemingly Unrelated Regression (SUR) Method
9. Linear Simultaneous Equations
   i. Overview: Discuss the Problem
   ii. The Identification Problem
   iii. Estimation:
      a. Single Equation Estimation:
         • Two-stage least Squares (2SLS)
         • Limited Information Maximum Likelihood (LIML)
      b. System Equation Estimation:
         • Three-stage least Squares (2SLS)
         • Full Information Maximum Likelihood (FIML)
10. Generalized Method of Moments (GMM)
11. Time Series Analysis: An Introduction
   i. Overview
   ii. Unit Root Tests
   iii. Cointegration: Modelling the Long Run
       a. The Engle-Granger Approach
       b. The Johansen Approach
   iv. Vector Error Correction Model (VECM): Modelling the Short Run

12. Selected Topics in Econometrics

References:

Assessment:
Mid-term: 35%
Assignments 15%
Final 50%
