Abstract

This paper builds upon a previous study by Finkle and Deeds (2001), which examines the trends for entrepreneurship faculty in schools throughout the world. Specifically, this paper will examine the trends from 1989/90 - 2002/03 in regards to the priority, level, and number of entrepreneurship positions and candidates. To collect data for the study the following sources were used: (1) The Chronicle of Higher Education, (2) the Academy of Management Placement Roster, and (3) Job postings on the Internet. Similar to Finkle and Deeds (2001), I used the Academy of Management Placement Roster as my periods of analysis. For instance, in the 2002-2003 academic year, I used the fall 2002 and spring 2003 placement rosters. The results of the study will be inserted into three tables, which will examine the national and international trends for entrepreneurship faculty.
